The information in this announcement supersedes that in the General Catalog. All announcements herein are subject to revision without notice.

This publication is available electronically at: www.engineering.ucsb.edu/current_undergraduates/
Undergraduate Students
The College of Engineering offers undergraduate degree programs in five disciplines: chemical engineering, computer engineering, computer science, electrical engineering, and mechanical engineering. Undergraduate applicants and students should direct all questions regarding programs and enrollment to the Office of Undergraduate Studies.

Graduate Students
Information regarding graduate programs offered in the College of Engineering may be obtained from the individual departments listed at right. The mailing address of each department is: Graduate Advisor, Name of Department, University of California, Santa Barbara, CA 93106.

General Catalog
The UC Santa Barbara General Catalog may be downloaded as a pdf file at: www.registrar.ucsb.edu and is available for purchase at www.ucsbstuff.com/

UNIVERSITY OF CALIFORNIA, SANTA BARBARA MISSION STATEMENT
The University of California, Santa Barbara is a leading research institution that also provides a comprehensive liberal arts learning experience. Because teaching and research go hand in hand at UC Santa Barbara, our students are full participants in an educational journey of discovery that stimulates independent thought, critical reasoning, and creativity. Our academic community of faculty, students, and staff is characterized by a culture of interdisciplinary collaboration that is responsive to the needs of our multicultural and global society. Our commitment to public service is manifested through the creation and distribution of knowledge that advances the well-being of our state, nation, and world. All of this takes place within a living and learning environment like no other, as we draw inspiration, opportunity, and advantage from the beauty and resources of UC Santa Barbara's extraordinary location at the edge of the Pacific Ocean.

ACCREDITATION
The University of California, Santa Barbara is fully accredited by the Accrediting Commission for Senior Colleges and Universities, Western Association of Schools and Colleges, 985 Atlantic Ave., Suite 100, Alameda, California 94501, (510) 748-9001. Accreditation documents are available for review in the Office of the Executive Vice Chancellor, Cheadle Hall 5105A.

EQUAL OPPORTUNITY AND NONDISCRIMINATION
The University of California, in accordance with applicable Federal and State law and University policy, does not discriminate on the basis of race, color, national origin, religion, sex, gender identity, pregnancy1, disability, age, medical condition (cancer related), ancestry, marital status, citizenship, sexual orientation, or status as a Vietnam-era veteran or special disabled veteran. The University also prohibits sexual harassment. This nondiscrimination policy covers admission, access, and treatment in University programs and activities.

1 Pregnancy includes pregnancy, childbirth, and medical conditions related to pregnancy or childbirth.

Academic Year Calendar ........................................... Back Cover
Welcome to the College of Engineering at UC Santa Barbara. There are many reasons we are one of the top engineering schools in the nation. We bring together an amazing group of faculty at the top of their fields. UCSB professors are, in fact, among the most cited by their colleagues worldwide, a testament to the quality and creativity of their research. A high percentage of the faculty has been elected to the prestigious National Academy of Sciences and National Academy of Engineering. We have five Nobel Prize winners on this campus, four of whom are faculty in engineering and the sciences. We’re also home to an amazing group of smart, accomplished, high-energy students. These more than 1,200 undergraduates, pursuing a variety of interests, contribute greatly to the quality of the learning environment as well as to the overall richness of campus life.

We have crafted courses that balance theory and applied science so our students are well prepared for successful careers in academia and in industry. Students especially interested in engineering and industry can take advantage of our Technology Management Program. Through coursework and “real world” experiences, the program gives our students insight into the world of technology from a business perspective. We want our students to understand what transforms a good technical idea into a good business idea. We want to give them a head start at attaining leadership positions in the technology business sector.

With a thriving interdisciplinary environment, our campus culture fosters creativity and discovery. A truly interdisciplinary culture allows all sorts of ideas to cross-fertilize and makes it easy for faculty to work effectively between disciplines to tackle big questions. Visiting scholars tell us they don’t often see the kind of openness among departments and ease of collaboration that they find here.

As part of the prestigious and well-established University of California system, we have the resources as well as the breadth and depth of talent to pursue new fields of scientific inquiry. We also bring an entrepreneurial attitude to our research, focusing on applications as much as discovery.

Our leading programs in areas as diverse as biotechnology, communications, computer security, materials, nanotechnology, networking, and photonic devices attest to the success of this approach.

At the core of this activity are our students, our central purpose. We encourage you to pursue every opportunity, both in and outside the classroom, to enhance your education. We have a talented and wise faculty and staff, equipped with extensive knowledge and diverse experience, to help you make decisions about courses and other activities as you pursue your degree. We look forward to having you in our classes, laboratories, and offices as you discover where your interests lead you.

Glenn Beltz
Associate Dean for Undergraduate Studies
Mission Statement
The mission of the College of Engineering is to provide its students a firm grounding in scientific and mathematical fundamentals; experience in analysis, synthesis, and design of engineering systems; and exposure to current engineering practice and cutting edge engineering research and technology. A spirit of entrepreneurship in education, scholarly activity and participation in engineering practice infuses UCSB's College of Engineering.

College of Engineering Honors Program
The Honors Program in the College of Engineering is designed to enrich the educational opportunities of its best students. Students in the Honors Program will be encouraged to participate in early experiences in scholarship through special seminars and individualized work in regular courses and, in later years, as members of research teams. Students in the honors Program will be provided opportunities to become peer mentors and tutors within the College.

Participation in the Honors Program offers preferential enrollment in classes for continuing students as well as graduate student library privileges. Housing is available to eligible first-year students in Scholars' Halls located in several university-owned residence halls.

The College of Engineering invites approximately the top 10% of incoming freshmen into the Honors Program based on a combination of high school GPA and SAT or ACT scores. (Please note: eligibility criteria are subject to change at any time.) Transfer students with a UC transferable GPA of 3.6 or greater are invited to join the College Honors Program. Students who do not enter the College of Engineering with honors at the freshman level may petition to enter the program after attaining a cumulative GPA of 3.5 or greater after two regular quarters at UCSB.

Graduating with Honors Program Designation to be listed as such in the Commencement Book, students must complete 6.0 total Honors units during their junior and senior years; comprised of coursework from departmental 196, 197, 199 or graduate level courses with grades of B or higher, complete a total of 10 hours of community service and maintain a 3.5 or higher cumulative GPA at the end of each Spring quarter.

Continued participation in the College Honors Program is dependent on maintaining a cumulative GPA of 3.5 or greater and active participation in both the academic and community service components of the Program.

Dean’s Honors
The College of Engineering gives public recognition to its outstanding undergraduate students by awarding Dean’s Honors at the end of each regular academic term to students who have earned a 3.5 grade-point average for the quarter and have completed a program of 12 or more letter graded units. (Grades of Incomplete or Not Passed automatically disqualify students for eligibility for Dean’s Honors.) The Dean’s Honors List is posted quarterly, and the award is noted quarterly on the student’s permanent transcript.

Graduating students of the College of Engineering who have achieved distinguished scholarship while at the university may qualify for Honors, High Honors, or Highest Honors at graduation.

Tau Beta Pi
Tau Beta Pi is the nation's oldest and largest engineering honor society. Its purpose is to honor academic achievement in engineering. Election to membership is by invitation only. To be eligible for consideration, students must be in the top one-eighth of their junior class or the top one-fifth of the senior class. Graduate students and faculty also belong to this honor society. In addition to regular meetings on campus, the organization participates in regional and national activities and sponsors local events, such as tutoring and leadership training, to serve the campus and community.

Education Abroad Program (EAP)
Students are encouraged to broaden their academic experience by studying abroad for a year, or part of a year, under the auspices of the University of California Education Abroad Program. See the EAP web site for more information: www.eap.ucsb.edu

Student Organizations
Student chapters of a number of engineering professional organizations are active on the UCSB campus. Students interested in any of these organizations may contact the Office of Undergraduate Studies of the College of Engineering for more information.

- American Institute of Chemical Engineers
- American Society of Mechanical Engineers
- Association for Computing Machinery
- Engineering Student Council
- Engineers without Borders
- Institute of Electrical and Electronics Engineers
- Los Ingenieros (Mexican-American Engineering Society/Society of Hispanic Professional Engineers)
- National Society of Black Engineers
- Society for Advancement of Chicanos and Native Americans in Science
- Society of Women Engineers
- Student Entrepreneurship Association
- Women in Science and Engineering
Change of Major and Change of College

Current UCSB students in a non-engineering major, as well as students wishing to change from one engineering major to another, are welcome to apply after the satisfactory completion of a pre-defined set of coursework (see below). Students who have completed more than 105 units will not be considered for a change of major/change of college in engineering or computer science unless they can demonstrate that they will be able to complete all the degree requirements for the proposed program without exceeding 215 total units.

Chemical Engineering. Before petitioning for a change of major to chemical engineering, students must have an overall UCSB grade point average of at least 3.0, and satisfactory completion of the following courses or their equivalents: Mathematics 3A-B-C; Chemistry 1A-AL or 2A-2AC, 1B-BL or 2B-2BC, 1C-1CL or 2C-2CC; Engineering 3; Physics 1-2. Only a limited number of petitions will be approved, and selection for entry into the major will be based on UC grade point averages and applicable courses completed.

Computer Engineering. Students may petition to enter the Computer Engineering pre-major at any time Option 1 below has been met, or they may petition to enter the full major when the requirements in Option 2 have been met.

Option 1:
1. An overall UCSB grade point average of at least 3.0; AND
2. Satisfactory completion at UCSB of at least four core classes required as preparation for the Computer Engineering major with a grade point average of at least 3.0 in all core classes completed. The core classes are Mathematics 3A, 3B, 3C, 5A; Computer Science 16, 24, 32, 40; Electrical and Computer Engineering 2A, 2B, 2C, 15A, 15B. Once approved for the Computer Engineering pre-major, the student must meet the requirements for advancing to the full major.

Option 2:
1. An overall UCSB grade point average of at least 3.0; AND
2. Satisfactory completion at UCSB of at least six of the core classes with a grade point average of at least 3.0. If the student has not attained the minimum 3.0 grade point average with the first six core classes completed, all core classes subsequently completed will be included in the grade point average computation; OR
3. Satisfactory completion of all thirteen core classes with a University of California grade point average of at least 2.75.

Computer Science. Students planning to enter the pre-computer science program must complete at least 16 units of pre-major coursework at UCSB, including 8 units in computer science, with at least a 3.0 grade point average for all pre-major courses completed with the University of California. Students who have completed the entire computer science pre-major with at least a 2.75 University of California grade point average will be admitted to full major standing upon petition whether or not they have been officially declared pre-majors. Petitions for changing to the pre-computer science or computer science majors may be filed any time upon meeting the above requirements.

Electrical Engineering. Students may petition to enter the Electrical Engineering major at any time both of the following requirements are met:
1. An overall UCSB grade point average of at least 3.0.
2. Satisfactory completion at UCSB, with a grade point average of 3.0 or better, of at least five classes, including at least two mathematics classes, from the following: Mathematics 5A-B-C, ECE 2A-B-C, ECE 15A. The calculation of the minimum GPA will be based on all classes completed from this list at the time of petitioning.

Mechanical Engineering. Before petitioning for a change of major to mechanical engineering, six (6) of the following core courses or their equivalents must be completed: Math 3A-B-C; Math 5A-B-C; Physics 1-2; ME 14-15 (at least one of the 6 courses must include ME 14 or ME 15). Acceptance into the major will be based on UC grade point averages and applicable courses completed.

Degree Requirements

To be eligible for a bachelor of science degree from the College of Engineering, a student must meet two sets of requirements: university degree requirements and college degree requirements.

University Degree Requirements

All undergraduate students must satisfy university academic residency, UC Entry Level Writing Requirement, American history and institutions, unit, and scholarship requirements. These requirements are described fully in the UCSB General Catalog.

College Undergraduate Degree Requirements

All undergraduate students must satisfy the preparation for the major, the major, the general education, and scholarship requirements. Preparation for the major and the major requirements for each program offered by the College of Engineering appear in subsequent sections of this catalog.

Advanced Placement Credit

Students who complete special advanced placement courses in high school and who earn scores of 3, 4, or 5 on the College Board Advanced Placement and International Baccalaureate Examination taken before high school graduation will receive 2, 4, or 8 units of credit toward graduation at UCSB for each such test completed with the required scores, provided scores are reported to the Office of Admissions. The specific units assigned to each test, course equivalents, and the applicability of this credit to the General Education requirements, are presented in the chart on page 7.

Note: Advanced Placement credit earned prior to entering the university will not be counted toward the minimum cumulative progress requirements (see General Catalog for more details).

International Baccalaureate Credit

Students completing the International Baccalaureate (IB) diploma with a score of 30 or above will receive 30 quarter units total toward their UC undergraduate degree. The university grants 8 quarter units for certified IB Higher Level examinations on which a student scores 5, 6, or 7. The university does not grant credit for standard level exams. The application of this credit to the General Education requirements and course equivalents for these exams are listed in the UCSB General Catalog.

Note: International Baccalaureate Examination credit earned prior to entering the university will not be counted toward maximum unit limitation either for selection of a major or for graduation.

Minimal Progress Requirements

A student in the College of Engineering will be placed on academic probation if the total number of units passed at UCSB is fewer than that prescribed by the prevailing academic Senate regulation regarding Minimum Cumulative Progress. At least three-fourths of the minimum number of academic units passed must include courses prescribed for the major.

The following courses may be counted toward the unit minimums: courses repeated to raise C-, D, or F grades; courses passed by examination; courses graded IP (In Progress); courses passed during summer session at UCSB or at another accredited college or university and transferred to UCSB.

Students must obtain the approval of the dean of engineering to deviate from these requirements. Approval normally will be granted only in the case of medical disability, severe personal problems, or accident.

Students enrolled in dual-degree programs must submit their proposed programs of study to the Associate Dean for Undergraduate Studies in the College of Engineering for approval. The individual programs must contain comparable standards of minimal academic progress.

Five-Year B.S./M.S. Degree Programs

Computer Engineering. A combined B.S./M.S. program in Computer Engineering provides an opportunity for outstanding undergraduates to earn both degrees in five years. The M.S. degree will be earned in either the Department of Computer Science or the Department of Electrical and Computer Engineering, while the B.S. degree is earned in Computer Engineering. Additional information about this program is available from the Undergraduate Studies Office and interested students should contact the Office early in their junior year, because the junior year class schedule will be different from other undergraduates. Transfer students should notify the Office of their interest in the program at the earliest possible opportunity. In addition to fulfilling undergraduate degree requirements, B.S./M.S. degree candidates must meet Graduate Division degree requirements, including university requirements for academic residence.

* A maximum of 8 units EACH in art studio, English, mathematics, and physics is allowed.
† A maximum of 4 units each in art studio and mathematics is allowed.
‡ Also satisfies the quantitative relationship requirement in Area C.
# Also satisfies the quantitative relationship requirement in Area C.
+ Maximum credit for computer science exams is 4 units.
† Consult the mathematics department about optional higher placement in calculus.
• If you received a score of 5 on Mathematics–Calculus AB, see www.math.ucsb.edu/ugrad/placement.php
and units of coursework as described in the UCSB General Catalog.

**Computer Science.** A combined B.S./M.S. program in computer science provides an opportunity for outstanding undergraduates to earn both degrees in five years. Additional information about this program is available from the computer science graduate program assistant or online at www.cs.ucsb.edu/programs/undergrad/bsms/cs.shtml. Interested students may apply after completing at least 3 but no more than 8 upper division computer science courses. In addition to fulfilling undergraduate degree requirements, B.S./M.S. degree candidates must meet Graduate Division degree requirements, including university requirements for academic residence and units of coursework.

**Electrical Engineering.** A combined B.S./M.S. program in Electrical Engineering provides an opportunity for outstanding undergraduates to earn both degrees in five years. Interested students should contact the Office of Undergraduate Studies early in the junior year, because the junior year class schedule will be different from other undergraduates. Transfer students should notify the Office of their interest in the program at the earliest opportunity. In addition to fulfilling undergraduate degree requirements, B.S./M.S. degree candidates must meet Graduate Division degree requirements, including university requirements for academic residence and units of coursework.

**Materials.** A combined B.S. Engineering/M.S. Materials program provides an opportunity for outstanding undergraduates in chemical, electrical, or mechanical engineering to earn both of these degrees in five years. This program enables students to develop all of the requisite knowledge in their core engineering disciplines and to complement this with a solid background in materials. This combination provides highly desirable training from an industrial employment perspective and capitalizes on the strengths of our internationally renowned materials department.

There is a five-year option for students who are pursuing a B.S. in Chemistry in the College of Letters and Science to complete an M.S. degree in Materials. Interested students should contact the Undergraduate Advisor in the Department of Chemistry & Biochemistry for additional information.

**B.S./M.A. Program with Economics.** A program which combines a B.S. in any engineering major (including computer science) with a master of arts in economics with an emphasis in business economics provides an opportunity for outstanding engineering undergraduates to earn both degrees in five years. Information about this program is available in the College of Engineering Undergraduate Studies Office or from the Department of Economics. Interested students should inform the Undergraduate Office of their interest in the program at the end of the sophomore year in order to plan their upper-division classes differently from other engineering undergraduates. After completing undergraduate degree requirements in an engineering program, students in this joint program must fulfill master's degree requirements for the degree in economics.

**Policy on Academic Conduct**

It is expected that all students in the College of Engineering, as well as those who take courses within the College, understand and subscribe to the ideal of academic integrity. To provide guidance on this, the College of Engineering has adopted a policy on expected academic conduct, a full copy of which appears below. As an example, it is not acceptable by default to work collaboratively on a homework assignment. In computer programming courses, a mere preliminary discussion of an assignment can lead to similarities in the final program that are detectable by sophisticated plagiarism detection software (see http://www.cs.berkeley.edu/~aiken/moss.html).

Instructors who have established that academic misconduct has occurred in their class have a variety of options at their disposal, which range from allowing the student to redo the work and/or assigning a failing grade to referring the case to the UCSB Judicial Affairs Office for either a letter of warning or a formal hearing before the Student-Faculty Committee on Student Conduct. Instructors are encouraged to discuss these remedies in further detail with the Associate Dean for Undergraduate Studies in the College of Engineering. Moreover, students who have been suspended because of academic misconduct charges are encouraged to work with the College of Engineering Undergraduate Office to develop an amended schedule that will permit the timeliest possible completion of a degree program.

**College of Engineering Policy**

The College of Engineering’s Academic Conduct Policy is compatible with that of the University of California, in that it is expected that students understand and subscribe to the ideal of academic integrity, and are willing to bear individual responsibility for their work. Any work (written or otherwise) submitted to fulfill an academic requirement must represent a student’s original work. Any act of academic dishonesty, such as cheating or plagiarism, will subject a person to University disciplinary action.

Cheating is defined by UCSB as the use, or attempted use, of materials, information, study aids, or services not authorized by the instructor of the course. The College of Engineering interprets this to include the unauthorized use of notes, study aids, electronic or other equipment during an examination or quiz; copying or looking at another individual’s examination or quiz; taking or passing information to another individual during an examination or quiz; allowing another individual to take one’s examination; stealing examinations or quizzes. Students working on take-home exams or quizzes should not consult students or sources other than those permitted by the instructor.

Plagiarism is defined by UCSB as the representation of words, ideas, or concepts of another person without appropriate attribution. The College of Engineering expands this definition to include the use of or presentation of computer code, formulae, ideas, or research results without appropriate attribution.

Collaboration on homework assignments (i.e., problem sets), especially in light of the recognized pedagogical benefit of group study, is dictated by standards that can and do vary widely from course to course and instructor to instructor. The use of old solution sets and published solution guides presents a similar situation. Because homework assignments serve two functions—helping students learn the material and helping instructors evaluate academic performance—it is usually not obvious how much collaboration or assistance from commonly-available solutions, if any, the instructor expects. It is therefore imperative that students and instructors play an active role in communicating expectations about the nature and extent of collaboration or assistance from materials that is permissible or encouraged.

**Expectations of Members of the College Academic Community**

In their classes, faculty are expected to (i) announce and discuss specific problems of academic dishonesty that pertain particularly to their classes (e.g., acceptable and unacceptable cooperation on projects or homework); (ii) act reasonably to prevent academic dishonesty in preparing and administering academic exercises, including examinations, laboratory activities, homework and other assignments, etc.; (iii) act to prevent cheating from continuing when it has been observed or reported to them by students, chairs, or deans; and, (iv) clearly define for students the maximum level of collaboration permitted for their work to still be considered individual work.

In their academic work, students are expected to (i) maintain personal academic integrity; (ii) treat all exams and quizzes as work to be conducted privately, unless otherwise instructed; (iii) take responsibility for knowing the limits of permissible or expected cooperation on any assignment.

---

**Chemical Engineering**

Department of Chemical Engineering, Engineering II, Room 3357; Telephone (805) 893-3412

Web site: www.chemeng.ucsb.edu

Chair: Michael Doherty
Vice-Chairs: Dale Seborg and Susannah Scott

Faculty

Bradley Chmelka, Ph.D., UC Berkeley, Professor (self-assembled materials, heterogeneous catalysis, surfactants and polymers, porous and composite solids, magnetic resonance)
Patrick S. Daugherty, Ph.D., University of Texas at Austin, Associate Professor (protein engineering and design, combinational molecular biology, gene targeting, viral vector engineering)

Michael F. Doherty, Ph.D., Cambridge University, Professor (process design and synthesis, separations, crystal engineering)

Francis J. Doyle III, Ph.D., California Institute of Technology, Mellichamp Professor of Process Control (process control, systems biology, nonlinear dynamics)

Glenn Fredrickson, Ph.D., Stanford University, Professor (polymer theory, block copolymers, phase transitions, statistical mechanics, glass transitions, composite media)

Michael J. Gordon, Ph.D., California Institute of Technology, Assistant Professor (surface physics, scanning probe microscopy, nanoscale materials, plasmonics, laser spectroscopy)

Jacob Israelachvili, Ph.D., University of Cambridge, Professor (surface and interfacial phenomena, adhesion, colloidal systems, surface forces, bio-adhesion, friction) *1

Edward J. Kramer, Ph.D., Carnegie Mellon University, Professor (microscopic fundamentals of fracture polymers, diffusion in polymers, and polymer surfaces, interfaces and thin films) *1

L. Gary Leal, Ph.D., Stanford University, Schlumberger Distinguished Professor in Chemical Engineering (fluid mechanics, physics of complex fluids, rheology)

Glenn E. Lucas, Ph.D., Massachusetts Institute of Technology, Professor (structural materials, mechanical properties) *2

Eric McFarland, Ph.D., Massachusetts Institute of Technology, M.D., Harvard, Professor (energy production, catalysis, reaction engineering, charge and energy transfer)

Samir Mitragotri, Ph.D., Massachusetts Institute of Technology, Professor (drug delivery and diagnostics, bio-membrane transport, membrane biophysics, biomedical ultrasound)

Baron G. Peters, Ph.D., UC Berkeley, Assistant Professor (molecular simulation, chemical kinetics, catalytic reaction mechanisms, nucleation, electron transfer)

Susannah Scott, Ph.D., Iowa State University, Professor (heterogeneous catalysis, surface organometallic chemistry, analysis of electronic structure and stoichiometric reactivity to determine catalytic function) *3

Dale E. Seborg, Ph.D., Princeton University, Professor (process dynamics and control, monitoring and fault detection, system identification)

M. Scott Shell, Ph.D. Princeton, Assistant Professor (molecular simulation, statistical mechanics, complex materials, protein biophysics)

Todd M. Squires, Ph.D., Harvard, Assistant Professor (fluid mechanics, microfluidics, microtechnology, complex fluids)

Theofanis G. Theofanous, Ph.D., University of Minnesota, Professor, Center for Risk Studies and Safety Director (transport phenomena in multiphase systems, risk analysis) *2

Matthew V. Tirrell, Ph.D., University of Massachusetts, Aullh Professor (bioengineering, polymer science and engineering) *1

Joseph Zasadzinski, Ph.D., University of Minnesota, Professor (surface and interfacial phenomena, high resolution microscopy, biomaterials)

*1 Joint appointment with the Department of Materials

*2 Joint appointment with the Department of Mechanical Engineering

*3 Joint appointment with the Department of Chemistry and Biochemistry.

Emeriti Faculty

Sanjoy Banerjee, Ph.D., University of Waterloo, Professor (transport processes, multiphase systems, process safety) *2

Owen T. Hanna, Ph.D., Purdue University, Professor Emeritus (theoretical methods)

Duncan A. Mellichamp, Ph.D., Purdue University, Professor Emeritus (process dynamics and control, digital computer control)

Robert G. Rinker, Ph.D., California Institute of Technology, Professor Emeritus (chemical kinetics, reaction engineering, catalysis)

Orville C. Sandall, Ph.D., UC Berkeley, Professor (transport of mass, energy, and momentum; separation processes)

Affiliated Faculty

Song-I Han, Ph.D. (Chemistry)

George M. Homsy, Ph.D. (Mechanical Engineering)

Frederick F. Lange, Ph.D. (Materials)

G. Robert Odette, Ph.D. (Materials, Mechanical Engineering)

Philip Alan Pincus, Ph.D. (Materials)

We live in a technological society which provides many benefits including a very high standard of living. However, our society must address critical problems that have strong technological aspects. These problems include: meeting our energy requirements, safeguarding the environment, ensuring national security, and delivering health care at an affordable cost. Because of their broad technical background, chemical engineers are uniquely qualified to make major contributions to the resolution of these and other important problems. Chemical engineers develop processes and products that transform raw materials into useful products.

Mission Statement

The program in Chemical Engineering has a dual mission:

• Education. Our program seeks to produce chemical engineers who will contribute to the process industries worldwide. Our program provides students with a strong fundamental technical education designed to meet the needs of a changing and rapidly developing technological environment.

• Research. Our program seeks to develop innovative science and technology that addresses the needs of industry, the scientific community, and society.

Educational Objectives for the Undergraduate Program

• We expect our graduates to become innovative, competent, contributing engineers in the process industries.

• We expect our graduates to demonstrate their flexibility and adaptability in the workplace, so that they remain effective engineers, take on new responsibilities, and assume leadership roles.

• We expect at least an average of 15% of our graduates to continue their education by obtaining advanced degrees.

Program Outcomes

Upon graduation, graduates of the Chemical Engineering program at UCSB are expected to have:

1. Fundamentals – the fundamental knowledge of mathematics, computing, science, and engineering needed to practice chemical engineering and the ability to apply this knowledge to identify, formulate, and solve chemical engineering problems;

2. Laboratory – the ability to design and conduct experiments and to analyze and interpret data;

3. Design – the ability to design a system, component, or process to meet desired specifications; ability to use modern engineering tools necessary for engineering practice;

4. Advanced Training – beyond the basic fundamentals in at least one area of chemical engineering as preparation for a continuing process of lifelong learning;

5. Teamwork/Communication – the ability to function productively in multidisciplinary teams working towards common goals; the ability to communicate effectively through written reports and oral presentations;

6. Engineering & Society – the broad education necessary to understand the impact of engineering solutions in a global/societal context; a knowledge of contemporary issues; an understanding of professional and ethical responsibility; a recognition of the need for and the ability to engage in lifelong learning.

Degree Programs

The Department of Chemical Engineering offers the B.S., M.S., and Ph.D. degrees in chemical engineering. The B.S. degree is accredited by the Engineering Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD, 21202-4012 – telephone: (410) 347-7700.

At the undergraduate level, emphasis is placed on a thorough background in the fundamental principles of science and engineering, strongly reinforced by laboratory courses in which students become familiar with the application of theory. At the graduate level, students take advanced courses and are required to demonstrate competence in conducting basic and applied research.

The B.S. degree provides excellent preparation for both challenging industrial jobs and graduate degree programs. Interdisciplinary B.S./M.S degree programs are also available which result in M.S. degrees in other fields. Students who complete a major in chemical engineering may be eligible to pursue a California teaching credential. Interested students should consult the credential advisor in the Graduate School of Education as soon as possible.

Under the direction of the Associate Dean for Undergraduate Studies, academic advising
services are jointly provided by advisors in the College of Engineering, as well as advisors in the department. Each undergraduate also is assigned a faculty advisor, to assist in selection of elective courses, plan academic programs, and provide advice on professional career objectives. Graduate students are assigned a thesis advisor in the area of their research interest. Undergraduates in other majors who plan to change to a major in the Department of Chemical Engineering should consult the department academic advisor for the requirements.

Several publications are available from the department office describing the undergraduate and graduate programs.

Undergraduate Program

Note: Schedules should be planned to meet both General Education and major requirements. Detailed descriptions of these requirements are presented in the College of Engineering Announcement and General Education booklet. A minimum of 194 units is required for graduation.

Bachelor of Science—Chemical Engineering

Preparation for the major

Engineering 3, Chemical Engineering 1A, 10; Chemistry 1A-B-C or 2A-B-C, 1AL-BL-CL or 2AC-BC-CC, 6A-L, 109A-B-C; Mathematics 3A-B-C, 5A-B-C, and Physics 1, 2, 3, 4, and 3L, 4L. Courses required for the major, inside or outside of the Department of Chemical Engineering, cannot be taken for the pass/not pass grading option. They must be taken for letter grades.

Upper-division major

Seventy-eight upper-division units are required of which sixty-six are specified: Chemical Engineering 110A-B, 119, 120A-B-C, 128, 132A-B-C, 140A-B, 152A, 170, 180A-B, 184A-B; Chemistry 113B-C; Materials 100B or 101. Twelve units of technical electives selected from a wide variety of upper-division science and engineering courses are also required. The list of approved technical electives is included on curriculum sheets. Prior approval of technical electives must be obtained from the student's faculty advisor and the technical elective worksheet must be submitted to the department by fall quarter of the senior year.

Transfer students who have completed most of the lower-division courses listed above and are entering the junior year of the chemical engineering program may take Chemical Engineering 10 concurrently with Chemical Engineering 120A in the fall quarter.

Chemical Engineering Courses

LOWER DIVISION

1A. Engineering and the Scientific Method

(1) STAFF
Engineering and its relationship to basic science, with specific examples from engineering practice.

10. Introduction to Chemical Engineering

(3) DOYLE, GORDON
Prerequisite: Chemistry 1A-B-C, Mathematics 3A-B-C, and Engineering 3. Chemical Engineering majors only. Elementary principles of chemical engineering. The major topics discussed include material and energy balances, stoichiometry, and thermodynamics.

55. Chem-E-Car Activity

(1) STAFF
Prerequisite: Chem 1C and 1CL. Students apply chemistry and engineering knowledge to design a model-scale, chemically powered car with chemically actuated brakes. The cars represent UCSB at American Institute of Chemical Engineering meetings. Grading is based on participation, design creativity, and car performance.

99. Introduction to Research

(1-3) STAFF
Prerequisite: consent of instructor and undergraduate advisor. May be repeated for credit to a maximum of 6 units. Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199DC/199RA courses combined.

UPPER DIVISION

102. Biomaterials and Biosurfaces

(3) ISRAELACHVILI
Recommended Preparation: Basic physical chemistry, chemistry, physics, thermodynamics and biology.

110A. Chemical Engineering Thermodynamics

(3) STAFF
Prerequisite: Chemical Engineering 10, Mathematics 5A; Engineering majors only.

110B. Chemical Engineering Thermodynamics

(3) STAFF
Prerequisite: Chemical Engineering 110A; Mathematics 5A; Engineering majors only. Use of the laws of thermodynamics to analyze processes encountered in engineering practice, including cycles and flows. Equations-of-state for describing properties of fluids and mixtures. Design issues of grafts and biopolymers. Basic biological and biochemical systems reviewed for nonbiologists.

120A. Transport Processes

(4) SQUIRES, ZASADZINSKI, MITRAGOouri, TIRREll
Prerequisite: Mathematics 5A-B-C, and Physics 4. Introductory course in conceptual understanding and mathematical analysis of problems in fluid dynamics of relevance to Chemical Engineering.

120B. Transport Processes

(3) STAFF
Prerequisite: Chemical Engineering 120A; Mathematics 5A-B-C and Physics 4.

120C. Transport Processes

(3) STAFF
Prerequisite: Chemical Engineering 120B, Mathematics 5A-B-C and Physics 4.

121. Colloids and Biosurfaces

(3) ISRAELACHVILI
Recommended Preparation: Basic physical chemistry, chemistry, physics, thermodynamics and biology.

124. Advanced Topics in Transport Phenomena/Safety

(3) BANERJEE, THEOFANOUS
Prerequisite: Chemical Engineering 120A-B-C or Mechanical Engineering 151A-B, and Mechanical Engineering 152A.

128. Separation Processes

(3) SCOTT
Prerequisite: Chemical Engineering 10 and 110A-B; open to College of Engineering majors only. Basic principles and design techniques of equilibrium-stage separation processes. Emphasis is placed on binary distillation, liquid-liquid extraction, and multicomponent distillation.

132A. Analytical Methods in Chemical Engineering

(4) DAUGHERtY, FREDRICkSON, SQUIRES
Prerequisite: Mathematics 5A-B.

132B. Computational Methods in Chemical Engineering

(4) FREDRICkSON
Prerequisite: Mathematics 5A-B-C.

132C. Statistical Methods in Chemical Engineering

(3) SEBORG
Prerequisite: Mathematics 5A-B-C. Probability concepts and distributions, random variables, error analysis, point estimation and confidence intervals, hypothesis testing, development of empirical chemical engineering models using regression techniques, design of experiments, process placement, and macroscopic mathematical analysis to understand fluid motion in response to forces.
monitoring based on statistical quality control techniques.

136. Introduction to Multiphase Flows (3) THEOFRANOS
Prerequisites: Chemical Engineering 120A-B-C, or Mechanical Engineering 151C and 152A.
Same course as ME 136.
Introduction from basic concepts and techniques of fluid mechanics and heat transfer, to local behavior in multiphase flows. Key multiphase phenomena, related physics. Extension of local conservation principles to usable formulations in multiphase flows. Modelling approaches. Practical examples.

138. Risk Assessment and Management (3) THEOFRANOS
Prerequisites: Chemical Engineering 120A-B-C, or Mechanical Engineering 151B and 152A.
Same course as ME 138.

140A. Chemical Reaction Engineering (3) MCFARLAND, SCOTT
Prerequisites: Chemical Engineering 110A and 120A-B.
Fundamentals of chemical reaction engineering with emphasis on kinetics of homogeneous and heterogeneous reacting systems. Reaction rates and reaction design are linked to chemical conversion and selectivity. Batch and continuous reactor designs with and without catalysts are examined.

140B. Chemical Reaction Engineering (3) MCFARLAND, SCOTT
Prerequisites: Chemical Engineering 110A, 120A-B and 140A.
Thermodynamics, kinetics, mass and energy transport, solvers associated with complex homogeneous and heterogeneous reacting systems. Catalysts and catalytic reaction rates and mechanisms. Adsorption and reaction at solid surfaces, including effects of diffusion in porous materials. Chemical reactors using heterogeneous catalysts.

141. The Science and Engineering of Energy Conversion (3) STAFF
Prerequisite: Chemical Engineering 110A and 140A.
Equivalent upper-division coursework in thermodynamics and kinetics from outside of department will be considered.
Fundamentals of the science underlying the supply issues facing society with a focus on the science, engineering, and economic principles of the major alternatives. Emphasis will be on the physical and chemical fundamentals of energy conversion technologies.

152A. Process Dynamics and Control (4) SEBORG, DOYLE
Prerequisites: Chemical Engineering 120A-B-C and 140A.
Development of theoretical and empirical models for chemical and physical processes, dynamic behavior of processes, transfer function and block diagram representation, control system design and analysis, stability analysis, computer simulation of controlled processes.

152B. Advanced Process Control (3) SEBORG
Prerequisite: Chemical Engineering 152A.
The theory, design, and experimental application of advanced process control strategies including feedforward control, cascade control, enhanced single-loop strategies, and predictive control. Analysis of multi-loop control systems. Introduction to on-line optimization.

154. Engineering Approaches to Systems Biology (3) DOYLE
Prerequisite: Chemical Engineering 170 and Mathematics 5A-B-C.
Applications of engineering tools and methods to solve problems in systems biology. Emphasis is placed on integrative approaches that address multi-scale and multi-rate phenomena in biological regulation. Modeling, optimization, and sensitivity analysis tools are introduced.

160. Introduction to Polymer Science (3) KRAMER
Prerequisite: Chemistry 109A-B.
Same course as Materials 160.
Introduction to polymer synthesis, characterization, structure, and mechanical properties of polymers. The course is taught from a materials perspective and includes polymer thermodynamics, chain architecture, measurement and control of molecular weight as well as crystallization and glass transitions.

170. Molecular and Cellular Biology for Engineers (3) DAUGHERTY
Prerequisite: Chemistry 109C. Not open for credit to students who have completed Ch E 172.
Introduction to molecular and cellular biology from an engineering perspective. Topics include protein structure and function, transcription, translation, post- translational processing, cellular organization, molecular transport and trafficking, and cellular models.

171. Introduction to Biochemical Engineering (3) DAUGHERTY
Prerequisite: Chemical Engineering 170.
Introduction to biochemical engineering covering cell growth kinetics, bioreactor design, enzyme processes, biotechnologies for modification of cellular information, and molecular and cellular engineering.

180A Chemical Engineering Laboratory (3) STAFF
Prerequisites: Chemical Engineering 110A; and Chemical Engineering 120A-B.
Experiments in thermodynamics, fluid mechanics, heat transfer, mass transfer, and chemical processing. Analysis of results, and preparation of reports.

180B Chemical Engineering Laboratory (3) STAFF
Prerequisites: Chemical Engineering 110A-B, and Chemical Engineering 120A-B; and, Chemical Engineering 128 and 140A.
Experiments in mass transfer, reactor kinetics, process control, and chemical and biochemical processing. Analysis of results, and preparation of reports.

184A. Design of Chemical Processes (3) DOHERTY
Prerequisites: Chemical Engineering 110A-B; 120A-B-C; 140A, and 152A.

184B. Design of Chemical Processes (3) DOHERTY
Prerequisites: Chemical Engineering 110A-B; 120A-B-C; 140A; 152A; and Chemical Engineering 184A.
The solution to comprehensive plant design problems. Use of computer process simulators. Optimization of plant design, investment and operations.

194. Group Studies for Advanced Students (1-4) STAFF
Prerequisites: consent of instructor. Limited to majors in the College of Engineering. Check with department for quarters offered.
Group studies intended for small number of advanced students who share an interest in a topic not included in the regular departmental curriculum.

196. Undergraduate Research (2-4) STAFF
Prerequisite: Upper-division standing, completion of 2 upper-division courses in Chemical Engineering, consent of the instructor.
Must have a minimum 3.0 grade-point-average for the preceding three quarters. May be repeated for up to 12 units. Not more than 3 units may be applied to departmental electives.

Research opportunities for undergraduate students. Students will be expected to give regular oral presentations, actively participate in a weekly seminar, and prepare at least one written report on their research.

198. Independent Studies in Chemical Engineering (1-5) STAFF
Prerequisites: consent of instructor; upper-division standing; completion of two upper-division courses in chemical engineering.
May have a minimum 3.0 grade-point-average for the preceding three quarters. May be repeated up to twelve units. Students are limited to five units per quarter and 30 units total in all 98/99/198/199/990C/1998A courses combined.
Directed individual studies.

GRADUATE COURSES

202. Biomaterials and Biosurfaces (3) SRAEIACHVILI
Prerequisites: consent of instructor.
Same course as BMSE 202.
Recommended preparation: prior biochemistry, physical chemistry, and organic chemistry.
Fundamentals of natural and artificial biomaterials and biosurfaces with emphasis on molecular level structure and function and the interactions of biomaterials and surfaces with the body. Design issues of grafts and biopolymers. Basic biological and biochemical systems modeling.

210A. Fundamentals and Applications of Classical Thermodynamics and Statistical Mechanics (4) DOHERTY
Fundamental concepts in classical thermodynamics and statistical mechanics for engineering students. Establishes the framework within which problems can be solved using methodologies that start with molecular level understanding.

210B. Advanced Topics in Equilibrium Statistical Mechanics (3) STAFF
Recommended Preparation: Recommended preparation: a course in physical chemistry.
Same course as Materials 214.
Application of the principles of statistical mechanics and thermodynamics to treat classical fluid systems at equilibrium. Topics include liquid state theory, computer simulation methods, critical phenomena and scaling principles, interfacial statistical mechanics, and electrolyte theory.

210C. Topics in Non-equilibrium Statistical Mechanics (3) STAFF
Introduction to the non-equilibrium statistical mechanics of classical fluid systems. Topics include: time correlation functions, linear response theory, kinetic theory of gases, Brownian motion, polymer dynamics, generalized hydrodynamics, non-equilibrium thermodynamics, and kinetics of phase transformations.

210D. Principles of Modern Molecular Simulation Methods (3) STAFF
Provides a broad overview of modern methods for computing the properties of multibody molecular systems. The course will cover: ab initio techniques, classical potential energy functions, Monte Carlo and molecular dynamics methods, free energy calculations, phase equilibria, and self-assembly organization.

211A. Matrix Analysis and Computation (4) STAFF
Prerequisite: consent of instructor.
Same course as Computer Science 211A, ECE 210A, Geology 251A, ME 210A and Mathematics 206A. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language.
Graduate level-matrix theory with introduction to matrix computations. SDV’s, pseudoinverses, variational characterization of eigenvalues, perturbation theory, direct and iterative methods for matrix computations.
211B. Numerical Simulation  
(4) STAFF  
Prerequisite: consent of instructor.  
Same course as Computer Science 211B, ECE 210B, Geology 251B, ME 210B and Mathematics 206B. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language.  

211C. Numerical Solution of Partial Differential Equations—Finite Difference Methods  
(4) STAFF  
Prerequisite: consent of instructor.  
Same course as Computer Science 211C, ECE 210C, Geology 251C, ME 210C, and Mathematics 206C. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language.  

211D. Numerical Solution of Partial Differential Equations—Finite Element Methods  
(4) STAFF  
Prerequisite: consent of instructor.  
Same course as Computer Science 211D, ECE 210D, Geology 251D, ME 210D, and Mathematics 206D. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language.  

212. Risk Assessment and Management  
(3) THEOFANOU  
Prerequisites: consent of instructor.  
Same course as ME 212.  

210A. Advanced Transport Processes—Laminar Flow and Convective Transport Processes  
(4) LEAL  
Prerequisite: consent of instructor.  

210B. Advanced Transport Processes—Laminar Flow and Convective Transport Processes  
(3) LEAL  
Prerequisite: consent of instructor.  
Continuation of CH 220A. Viscous flows. Application of scaling and asymptotic methods to transport problems and fluid motions; Weak convection effects; Boundary layer theories for fluid mechanics and transport processes. Introduction to Linear stability theory for interfacial and buoyancy-driven flows.

220C. Advanced Transport Processes—Mass Transfer  
(3) ZADOLÉN  
Basic principles of diffusional processes, multicomponent systems, diffusion with chemical reaction, penetration and surface renewal theories, turbulent transport.

222A. Colloids and Interfaces I  
(3) ISRAELACHVILI  
Prerequisite: consent of instructor.  
Same course as Materials 222A and BMSE 222A. Introduction to the various intermolecular interactions in solutions and in colloidal systems: Van der Waals, electrostatic, hydrophobic, solvation, H-bonding. Introduction to colloidal systems: particles, micelles, polymers, etc. Surfactants: wetting, contact angles, surface tension, etc.

222B. Colloids and Interfaces II  
(3) ZADOLÉN  
Prerequisite: consent of instructor.  

226. Level Set Methods  
(4) GIBOU  
Prerequisite: Computer Science 211C, or Chemical Engineering 211C, or ECE 210C, or ME 210C.  
Same course as CMPS 216, ECE 226 and ME 216. Mathematical description of the level set method and design of the numerical methods used in its implementations (ENO-WENO, Godunov, Lax-Friedrich, etc.). Introduction to the Ghost Fluid Method. Applications in CFD, Materials Sciences, Computer Vision and Computer Graphics.

230A. Advanced Theoretical Methods in Engineering  
(4) CHIMELKA, FREDRICKSON, LEAL, PETERS  
Prerequisite: consent of instructor.  
Same course as ME 244A. Methods of solution of partial differential equations and boundary value problems. Linear vector and function spaces, generalized Fourier analysis, Sturm-Liouville theory, calculus of variations, and conformal mapping techniques.

Vice Director: Patrick Yue

Faculty

Kevin Almeroth, Ph.D., Georgia Institute of Technology, Professor (computer networks and protocols, large-scale multimedia systems, performance evaluation and distributed systems)

Kaustaw Banerjee, Ph.D., UC Berkeley, Professor (high performance VLSI and mixed signal system-on-chip designs and their design automation methods; single electron transistors; 3D and optoelectronic integration)

Forrest D. Brewer, Ph.D., University of Illinois at Urbana-Champaign, Professor (VLSI and computer system design automation, theory of design and design representations, symbolic techniques in high level synthesis)

Tevfik Bultan, Ph.D., University of Maryland, College Park, Professor (specification and automated analysis of concurrent systems, computer-aided verification, model checking)

Steven E. Butner, Ph.D., Stanford University, Professor (computer architecture, VLSI design of CMOS and gallium-arsenide ICs with emphasis on distributed organizations and fault-tolerant structures)

Kwang-Ting (Tim) Cheng, Ph.D., UC Berkeley, Professor (design automation, VLSI testing, design synthesis, design verification, algorithms)

Frederic T. Chong, Ph.D., Massachusetts Institute of Technology, Professor (computer architecture, novel computing technologies, quantum computing, embedded systems, and architectural support for system security and reliability)

Chandra Krantz, Ph.D., University of California, San Diego, Associate Professor (dynamic and adaptive compilation systems, high-performance internet (mobile) computing, runtime and compiler optimizations for Java/CL, efficient mobile program transfer formats)

Malgorzata Marek-Sadowska, Ph.D., Technical University of Warsaw, Poland, Professor (design automation, computer-aided design, integrated circuit layout, logic synthesis)

P. Michael Melliar-Smith, Ph.D., University of Cambridge, Professor (fault tolerance, formal speciﬁcation and veriﬁcation, distributed systems, communication networks and protocols, asynchronous systems)

Louise E. Moser, Ph.D., University of Wisconsin, Professor (distributed systems, computer networks, software engineering, fault-tolerance, formal speciﬁcation and veriﬁcation, performance evaluation)

Behrooz Parhami, Ph.D., UC Los Angeles, Professor (parallel architectures and algorithms, computer arithmetic, computer design, dependable and fault-tolerant computing)

Volkar Rodoplu, Ph.D., Stanford University, Associate Professor (wireless networks, energy-efﬁcient and device-adaptive communications)

Tim Sherwood, Ph.D., UC San Diego, Associate Professor (computer architecture, dynamic optimization, network and security processors, embedded systems, program analysis and characterization, and hardware support of software systems)

Lue Theogarajan, Ph.D., Massachusetts Institute of Technology, Assistant Professor (low-power analog VLSI, biomimetic nanosystems, neural prostheses, biosensors, block co-polymer synthesis, self-assembly, and microfabrication)

Li-C. Wang, Ph.D., University of Texas at Austin, Associate Professor (design veriﬁcation, testing, computer-aided design of microprocessors)

Richard Wolski, Ph.D., UC Davis/Livermore, Professor (high-performance distributed computing, computational grids, computational economies for resource allocation and scheduling)

Patrick Yue, Ph.D., Stanford University, Associate Professor (high-speed CMOS IC design, cell-based RF CAD methodology and integrated biomedical sensors)

Ben Zhao, Ph.D., University of California, Berkeley, Assistant Professor (computer/net mobile networking, large-scale distributed systems, operating systems, network simulation and modeling)

Heather Zheng, Ph.D., University of Maryland, College Park, Associate Professor (wireless/mobile/ad hoc networking, cognitive radio and dynamic spectrum networks, multimedia communications, security, game theory, algorithms, network simulation and modeling)

The Computer Engineering major’s objective is to educate broadly based engineers with an understanding of digital electronics, computer architecture, system software and integrated circuit design. These topics bridge traditional electrical engineering and computer science curricula. The Computer Engineering degree program is conducted jointly with faculty from the Department of Computer Science and the Department of Electrical and Computer Engineering. Computer engineers emerging from this program will be able to design and build integrated digital hardware and software systems in a wide range of applications areas. Computer engineers will seldom work alone and thus teamwork and project management skills are also emphasized. The undergraduate major in Computer Engineering prepares students for a wide range of positions in business, government and private industrial research, development and manufacturing organizations.

Under the direction of the Associate Dean for Undergraduate Studies, academic advising services are jointly provided by advisors in the College of Engineering, as well as advisors in the department. Faculty advisors are also available to help with academic program planning. Students who hope to change to this major should consult the department advisor.

The computer engineering program is not accredited by a Commission of ABET.

Mission Statement

To prepare our students to reach their full potential in computer engineering research and industrial practice through a curriculum emphasizing the mathematical tools, scientific basics, fundamental knowledge, engineering principles, and practical experience in the field.

Educational Objectives

The Computer Engineering Program seeks to produce graduates who:

1) Make positive contributions to society by applying their broad knowledge of computer engineering theories, techniques, and tools.

2) Create processes and products, involving both hardware and software components, that solve societal and organizational problems effectively, reliably, and economically.

3) Are committed to the advancement of science, technical innovation, lifelong learning, professionalism, and mentoring of future generations of engineers.

4) Understand the ethical, social, business, technical, and human contexts of the world in which their engineering contributions will be utilized.

Program Outcomes

Upon completion of this program, students will have:

1) Acquired strong basic knowledge and skills in those fundamental areas of mathematics, science, and engineering necessary to facilitate specialized professional training at an advanced level. Developed a recognition of the need for and the ability to engage in lifelong learning.

2) Experienced in-depth training in state-of-the-art specialty areas in computer engineering.

3) Benefited from hands-on, practical laboratory experiences where appropriate throughout the program. The laboratory experiences will be closely integrated with coursework and will make use of up-to-date instrumentation and computing facilities. Students will have completed both hardware-oriented and software-oriented assignments.

4) Experienced design-oriented challenges that exercise and integrate skills and knowledge acquired during their course of study. These
challenges may include design of components or subsystems with performance specifications. Graduates should be able to demonstrate an ability to design and test a system, analyze experimental results, and draw logical conclusions from them.
5) Learned to function well in multidisciplinary teams and collaborative environments. To this end, students must develop communication skills, both written and oral, through teamwork and classroom participation. Teamwork and individual originality will be evidenced through written reports, webpage preparation, and public presentations.
6) Completed a well-rounded and balanced education through required studies in selected areas of fine arts, humanities, and social sciences. This outcome provides for the ability to understand the impact of engineering solutions in a global and societal context. A required course in engineering ethics will have prepared students for making professional contributions while maintaining institutional and individual integrity.

Admission to the Major
Requirements for Advancing to the Computer Engineering Major from the Computer Engineering Pre-Major
Students intending to major in computer engineering should declare the pre-major when applying for admission to the university. It is strongly recommended that incoming freshmen with no prior programming experience take Computer Science 8 before taking Computer Science 16.

Students may petition to advance from the computer engineering pre-major to the computer engineering major when they have met either of the following requirements:
Option A: Satisfactory completion at UCSB of at least six core classes required as preparation for the computer engineering major with a grade-point-average of at least 3.0. The core classes are: Mathematics 3A, 3B, 3C, 5A; Computer Science 16, 24, 32, 40; Electrical and Computer Engineering 2A, 2B, 2C, 15A, 15B. If the student has not attained the minimum 3.0 grade-point-average with the first six core classes completed, all core classes subsequently completed will be included in the grade-point-average computation.

Option B: Satisfactory completion of all thirteen core classes with a University of California grade-point-average of at least 2.75.

Undergraduate Program
Note: Schedules should be planned to meet both General Education and major requirements. Detailed descriptions of these requirements are presented in the College of Engineering Announcement and General Education booklet. A minimum of 189 units is required for graduation.

Bachelor of Science—Computer Engineering
The curriculum contains a core required of all computer engineers, a choice of at least 32 units of senior year elective courses including completion of two out of eight elective sequences and a senior year capstone design project.
Because the Computer Engineering degree program is conducted jointly by the Department of Computer Science and the Department of Electrical and Computer Engineering, several of the upper-division courses have equivalent versions offered by ECE or CMPSC. These courses are considered interchangeable, but only one such course of a given equivalent ECE/CMPSC pair may be taken for credit.

Courses required for the major, whether inside or outside of the Departments of Electrical and Computer Engineering or Computer Science, must be taken for grades. They cannot be taken for the passed/not passed grading option.

Preparation for the major
All undergraduate Computer Engineering majors are required to meet a set of minimum unit and grade-point requirements and a set of General Education requirements which are common to all undergraduate majors in the College of Engineering. In addition, required preparation for the major consists of the following lower-division courses (or their equivalents if taken elsewhere): Chemistry 1A-B or 2A-B, 1AL-BL or 2AC-BC; Computer Science 16, 24, 32, 40; ECE 2A-B-C, 15A-B; Mathematics 3A-B-C, 5A; Physics 1, 2, 3, 4, 3L, 4L.
The program academic advisor can suggest a recommended study plan for Computer Engineering freshmen and sophomores. Each student is assigned a departmental faculty advisor who must be consulted in planning the junior and senior year programs.

Upper-division major
The upper-division requirements consist of a set of required courses and a minimum of 32 units (8 classes) of additional departmental elective courses comprised of at least two sequences chosen from a set of eight specialty sequences. Each sequence must consist of two or more courses taken from the same course/sequence group. The department electives must also include a capstone design project (CMPSC 189A-B/ECE 189A-B). Upper-division courses required for the major are: Computer Science 130A, 170; ECE 152A-B, 154, either ECE 139 or PSTAT 120A; Engineering 101.
The required departmental electives are taken primarily in the senior year; they permit students to develop depth in specialty areas of their choice. A student’s elective course program and senior project must be approved by a departmental faculty advisor. A variety of elective programs will be considered acceptable. Sample programs include those with emphasis in: computer-aided design (CAD); computer systems design; computer networks; distributed systems; programming languages; real-time computing and control; multimedia; and very large-scale integrated (VLSI) circuit design.
The defined sequences from which upper-division departmental electives may be chosen are:
• Computer-Aided Design (CAD): ECE 156A-B
• Computer Systems Design: ECE/CMPSC 153A, ECE 153B
• Computer Networks: ECE 155A/CMPSC 176A, ECE 155B/CMPSC 176B

Satisfactory Progress and Prerequisites
A majority of Computer Science and Electrical and Computer Engineering courses have prerequisites which must be completed successfully. Successful completion of prerequisite classes requires a grade of C or better in Mathematics 3A-B-C and a grade of C- or better in ECE classes. Students will not be permitted to take any ECE or CMPSC course if they received a grade of F in one or more of its prerequisites. Students who fail to maintain a grade-point average of at least 2.0 in the major may be denied the privilege of continuing in the major.

Computer Engineering Courses
See listings for Computer Science starting on page 16 and Electrical and Computer Engineering starting on page 23.

Computer Science
Department of Computer Science, Harold Frank Hall, Room 2104; Telephone (805) 893-4321
Web site: www.cs.ucsb.edu
Chair: Amr El Abbadi
Vice Chair: Tefik Sultan

Faculty
Divyakant Agrawal, Ph.D., State University of New York at Stony Brook, Professor (distributed systems and databases)
Kevin Almeroth, Ph.D., Georgia Institute of Technology, Professor (computer networks and protocols, large-scale multimedia systems, performance evaluation and distributed systems)
Elizabeth Belding, Ph.D., University of California, Santa Barbara, Professor (mobile wireless networking, ad hoc mobile networks and protocols, and multimedia systems and performance evaluation)
Tefik Sultan, Ph.D., University of Maryland, College Park, Professor (model checking, concurrency, web services, static analysis, software engineering)
Peter R. Cappello, Ph.D., Princeton University, Professor (Java/Internet-based parallel computing, multiprocessor scheduling, market-based resource allocation, self-directed learning)
Frederic T. Chong, Ph.D., Massachusetts Institute of Technology, Professor (computer architecture, novel computing technologies, quantum computing, embedded systems, and...
architectural support for system security and reliability)

**Phillip Conrad**, Ph.D., University of Delaware, Lecturer PSOE (computer science education, computer networks and communication, multimedia computing, transport protocols, web technologies) *1

**C. Michael Costanzo**, Ph.D., University of California, Santa Barbara, Lecturer

**Ömer Egecioglu**, Ph.D., University of California, San Diego, Professor (bijective and enumerative combinatorics, parallel algorithms, approximation algorithms, combinatorial algorithms)

**Amr El Abbadi**, Ph.D., Cornell University, Professor (information systems, databases, fault-tolerant distributed systems)

**Diana Franklin**, Ph.D., University of California, Davis, Lecturer SOE (computer architecture, embedded systems, architectural support for reliability, undergraduate teaching methods for diverse populations)

**Frederic Gibou**, Ph.D., University of California, Los Angeles, Associate Professor (computational mathematics, modeling and simulations - materials science, multiphase flows, level-set methods, ghost-fluid methods, and interface problems; and image segmentation with applications to radiotherapy treatment planning and civil engineering) *2

**John R. Gilbert**, Ph.D., Stanford University, Professor (combinatorial scientific computing, tools and software for computational science and engineering, numerical linear algebra, smart matter and systemic MEMS, distributed sensing and control)

**Teofilo Gonzalez**, Ph.D., University of Minnesota, Professor (multimessage multicasting, VLSI placement and routing algorithms, scheduling theory; design and analysis of algorithms)

**Ben Hardekopf**, Ph.D., University of Texas at Austin, Acting Assistant Professor (programming Languages and systems)

**Tobias Höllerer**, Ph.D., Columbia University, Associate Professor (human computer interaction, computer graphics, virtual and augmented reality, wearable and ubiquitous computing)

**Oscar H. Ibarra**, Ph.D., University of California, Berkeley, Professor (design and analysis of algorithms, theory of computation, computational complexity, parallel computing)

**Richard A. Kemmerer**, Ph.D., University of California, Los Angeles, Professor (specification and verification of systems, computer system security and reliability, programming and specification language design, software engineering, secure mobile computing)

**Chandra Krintz**, Ph.D., University of California, San Diego, Associate Professor (dynamic and adaptive compilation systems, high-performance internet (mobile) computing, runtime and compiler optimizations for Java/ CIL, efficient mobile program transfer formats)

**Christopher Kruegel**, Ph.D., Vienna University of Technology, Associate Professor (computer and network security, malware detection, websecurity, program analysis, operating systems)

**Linda R. Petzold**, Ph.D., University of Illinois at Urbana–Champaign, Professor (computational science and engineering, multscale numerical simulation, systems biology) *2

**Tim Sherwood**, Ph.D., University of California, San Diego, Associate Professor (computer architecture, dynamic optimization, network and security processors, embedded systems, program analysis and characterization, hardware support of software systems)

**Ambuj Singh**, Ph.D., University of Texas at Austin, Professor (bioinformatics, databases, parallel and distributed systems) *3

**Terence R. Smith**, Ph.D., Johns Hopkins University, Professor (spatial databases, techniques in artificial machine intelligence) *4

**Jianwen Su**, Ph.D., University of Southern California, Professor (database systems and applications, web services)

**Subhash Suri**, Ph.D., Johns Hopkins University, Professor (algorithms, internet computing, computational geometry)

**Matthew Turk**, Ph.D., Massachusetts Institute of Technology, Professor (computer vision, human computer interaction, perceptual user interfaces, imaging systems)

**Wim van Dam**, Ph.D., University of Oxford and University of Amsterdam, Associate Professor (quantum computation, quantum algorithms, quantum communication, quantum information theory) *5

**Giovanni Vigna**, Ph.D., Politecnico di Milano, Professor (computer and network security, network models and protocols, mobile code languages and systems, mobile agent security)

**Yuan-Fang Wang**, Ph.D., University of Texas at Austin, Professor (computer vision, computer graphics, artificial intelligence)

**Richard Wolfski**, Ph.D., University of California, Davis/Livermore, Professor (distributed systems, computational grid computing, on-line performance forecasting)

**XiFeng Yan**, Ph.D., University of Illinois at Urbana Champaign, Assistant Professor (data mining, data management, machine learning, bioinformatics)

**Tao Yang**, Ph.D., Rutgers University, Professor (parallel and distributed systems, high performance scientific computing, cluster-based network services, Internet search)

**Ben Zhao**, Ph.D., University of California, Berkeley, Assistant Professor (large-scale distributed systems, security and privacy, overlay and peer-to-peer networks, mobile and wireless networks)

**Heather Zheng**, Ph.D., University of Maryland, College Park, Associate Professor (wireless/mobile/ad hoc networking, cognitive radio and dynamic spectrum networks, multimedia communications, security, game theory, algorithms, network simulation and modeling)

**Emeriti Faculty**

**Alan G. Konheim**, Ph.D., Cornell University, Professor (computer communications, computer systems, modeling and analysis, cryptography)

**Marvin Marcus**, Ph.D., University of California, Berkeley, Professor Emeritus (linear and multilinear algebra, scientific computation, numerical algorithms)

**Roger C. Wood**, Ph.D., University of California, Los Angeles, Professor Emeritus (computer system modeling, design and analysis, computer architecture) *6

*1 Joint appointment with the College of Creative Studies.

*2 Joint appointment with the Department of Mechanical Engineering.

*3 Joint appointment with the Department of Biomedical Science and Engineering (BMSE).

*4 Joint appointment with the Department of Geography.

*5 Joint appointment with the Department of Physics.

*6 Joint appointment with the Department of Electrical and Computer Engineering

**Affiliated Faculty**

**B.S. Manjunath**, Ph.D., (Electrical and Computer Engineering)

**P. Michael Melliar-Smith**, Ph.D. (Electrical and Computer Engineering)

**Kenneth Rose**, Ph.D. (Electrical and Computer Engineering)

**Martin Raubal**, Ph.D. (Geography)

The Department of Computer Science offers programs leading to the degrees of bachelor of arts and bachelor of science in computer science, and the M.S. and Ph.D. in computer science. The B.A. is a College of Letters and Science major; the B.S. is a College of Engineering major. The B.S. degree program in computer science is accredited by the Computing Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012; telephone: (410) 347-7700.

One of the most important aspects of the Computer Science program at UCSB is the wealth of "hands-on" opportunities for students. UCSB has excellent computer facilities. Campus Instructional Computing makes accounts available to all students. Computer Science majors and premajors use the workstations in the Computer Science Instructional Lab and Engineering Computing Infrastructure computing facilities. Students doing special projects can gain remote access to machines at the NSF Supercomputing Centers.

Additional computing facilities are available for graduate students in the Graduate Student Laboratory. Students working with faculty have access to the specialized research facilities within the Department of Computer Science.

The undergraduate major in computer science has a dual purpose: to prepare students for advanced studies and research and to provide training for a variety of careers in business, industry, and government.

Under the direction of the Associate Dean for Undergraduate Studies, academic advising services are jointly provided by advisors in the College of Engineering, as well as advisors in the department. A faculty advisor is also available to help with academic program planning. A department publication, Computer Science Undergraduate Brochure, describes degree offerings and degree requirements.

**Mission Statement**

The Computer Science department seeks to prepare undergraduate and graduate students for productive careers in industry, academia, and government, by providing an outstanding environment for teaching and research in the core and emerging areas of the discipline. The department places high priority on establishing and maintaining innovative research programs.
Program Goals for Undergraduate Programs
The goal of the computer science undergraduate program is to prepare future generations of computer professionals for long-term careers in research, technical development, and applications. Baccalaureate graduates, ready for immediate employment, are trainable for most computer science positions in government and a wide range of industries. Outstanding graduates interested in highly technical careers, research, and/or academia, should be prepared to further their education in graduate school.

The primary computer science departmental emphasis is on computer program design, analysis and implementation, with both a theoretical foundation and a practical component.

Program Outcomes for Undergraduate Programs
The program enables students to achieve, by the time of graduation:
a. An ability to apply knowledge of computing and mathematics appropriate to computer science.
b. An ability to analyze a problem, and identify and define the computing requirements appropriate to its solution.
c. An ability to design, implement, and evaluate a computer-based system, process, component, or program to meet desired needs.
d. An ability to function effectively on teams to accomplish a common goal.
e. An understanding of professional, ethical, and social responsibilities.
f. An ability to communicate effectively.
g. An ability to analyze the impact of computing on individuals, organizations, and society, including ethical, legal, security, and global policy issues.
h. Recognition of the need for and an ability to engage in continuing professional development.
i. An ability to use current techniques, skills, and tools necessary for computing practice.
j. An ability to apply mathematical foundations, algorithmic principles, computer science theory in the modeling and design of computer-based systems in a way that demonstrates comprehension of the trade-offs involved in design choices.
k. An ability to apply design and development principles in the construction of software systems of varying complexity.

Admission to the Major
Students intending to major in computer science should declare a computer science pre-major when applying for admission to the university.

Computer Science majors and pre-majors have priority when registering in all Computer Science courses. Students who declare the computer science pre-major or major are responsible for satisfying major requirements in effect at the time of their declaration. When students have completed the required pre-major courses, they must petition to change from pre-major to major status. New students cannot be accepted into the computer science major unless they have successfully completed the computer science preparation for the major courses.

Courses required for the pre-major or major, lower- or upper-division, inside or outside of the Department of Computer Science, must be taken for letter grades.

Undergraduate Program

Computer Engineering Major
This major is offered jointly by the Department of Computer Science and the Department of Electrical and Computer Engineering. For information about this major see page 13.

Bachelor of Science—Computer Science

Note: Schedules should be planned to meet both General Education and major requirements. Detailed descriptions of these requirements are presented in the College of Engineering Announcement and General Education booklet. A minimum of 184 units is required for graduation.

Admission to the full BS major is contingent upon the prior completion of the courses listed in the preparation for the major with at least a 2.75 cumulative grade point average.

Preparation for the major—B.S.

Required: Mathematics 3A-B-C and 3A-B; Computer Science 16, 24, 32, 40, 48, 56 and 64; and Probability and Statistics 120A.

Students with no previous programming background should take CMPSC 8 before taking CMPSC 16. CMPSC 8 is not included in the list of preparation for the major courses but may be counted as a free elective.

Students applying for major status in the BS program who have completed more than 105 units will not be considered for a change of major/change of college unless they can demonstrate that they will be able to complete all of the degree requirements for the proposed program without exceeding 215 units.

Students may petition to enter the computer science pre-major at any time Option A below has been met, or they may petition to enter the full major when Option B has been met.

Option A: Satisfactory completion at UCSB of at least four 4-unit courses required for the computer science preparation for the major, including at least two computer science courses, with a University of California grade point average of at least 3.0 in all the preparation for the major courses taken.

Option B: Satisfactory completion of all the preparation for the major requirements with a University of California grade point average of at least 2.75.

Please note: Pre-major status does not guarantee admission to major status. To be admitted to the major, the student must complete the pre-major courses with a minimum grade point average of 2.75. All courses required for the preparation for the major must be taken for a letter grade. No exceptions will be made to the minimum 2.75 GPA rule.

Upper-division major
The following courses are required: Computer Science 111 or 140, 130A-B, 138, 154, 160, 162, 170; Electrical and Computer Engineering 152A; and Probability and Statistics 120B. In addition, at least 20 units of major field electives are required. Prior approval of these electives must be obtained from the faculty advisor. In addition, the following courses are required: Engineering 101, Physics 1, 2, 3, 3L and at least 8 units of science electives. Lists of approved major field electives and science electives are available in the computer science office and on the web at: www.cs.ucsb.edu/undergraduate

Bachelor of Arts—Computer Science

The College of Letters and Science offers a bachelor of arts degree in computer science, with emphases in computational biology, computational economics, and computational geography. For information about this major, refer to the College of Letters and Science section of the UCSB General Catalog.

Computer Science Courses

LOWER DIVISION

1. Seminar on the Field of Computer Science
(1) FRANKLIN
Overviews the potential of, and opportunities available from, the field of computer science. Topics include an overview of how computers work and the interesting ways in which computers can be applied to solve important and high-impact technological, social, and cutting-edge research problems.

5AA-ZZ. Introduction to Computer Programming
(4) FRANKLIN
Not open for credit to students who have completed Computer Science 10 or Engineering 3.

Introduction to programming and the organization of computers. Basic programming concepts, algorithms, data and control structures, debugging, program design, documentation, structured programming.

8. Introduction to Computer Science
(4) CONRAD, FRANKLIN
Not open for credit to students who have completed Computer Science 5, Computer Science 10, Computer Science 16, or Engineering 3.

Introduction to computer program development for students with little to no programming experience. Basic programming concepts, variables and expressions, data and control structures, algorithms, debugging, program design, and documentation.

10. Computer Programming
(4) SU
Prerequisite: Mathematics 3A.

Students with no prior programming background are encouraged to take Computer Science 5AA before 10.

Introduction to programming and computers. Basic programming concepts: algorithms, data and control structures, debugging, program design, documentation, structured programming, object oriented programming.

11AA-ZZ. Programming Language Laboratory
(1) FRANKLIN
Different sections may be repeated. Sections not always offered.

Recommended preparation: knowledge of at least one programming language.

A self-paced course to allow a student who already possesses a working knowledge of at least one programming language an opportunity to learn other languages of interest.

12. Programming Methods in C
(4) FRANKLIN

16 • COLLEGE OF ENGINEERING: COMPUTER SCIENCE
16. Problem Solving with Computers I (4) FRANKLIN, COLLETTE
Prerequisite: Math 3A
Recommended Preparation: Students with no experience with computer programming are encouraged to take Computer Science 5 or 8 before Computer Science 16.
Not open for credit to students who have completed Computer Science 10.
Fundamental building blocks for solving problems using computers. Topics include basic computer organization and programming constructs: memory CPU, binary arithmetic, variables, expressions, statements, conditionals, iteration, functions, parameters, recursion, primitive and composite data types, and basic operating system and debugging tool.

20. Programming Methods (4) AGRAWAL
Prerequisite: Computer Science 10 and Mathematics 3B
Programming techniques as follows: specification, representation, and manipulation of basic data structures such as stacks, queues, lists, trees, sets, arrays, searching and sorting techniques; predicate logic and program correctness; induction and recursion; running time analysis. Students write several medium-sized object-oriented programs.

24. Problem Solving with Computers II (4) FRANKLIN, COLLETTE
Prerequisite: Computer Science 16 or Engineering 3; and Mathematics 3B
Not open for credit to students who have completed Computer Science 12 or 20.
Repeat Comments: Course counts as legal repeat of Computer Science 12.
Intermediate building blocks for solving problems using computers. Topics include object-oriented design and development, algorithms for manipulating these data structures and their runtime analyses. Data structures introduced include stacks, queues, lists, trees, and sets.

30. Introduction to Computer Systems (4) ZHENG
Prerequisite: Engineering 3 or Computer Science SAA-ZZ or 10; and, Mathematics 3C
Not open for credit to students who have completed ECE 15 or 15B.
Basic computer organization, assembly language programming, Gates, combinational circuits, flip-flops and the design and analysis of sequential circuits.

32. Object-Oriented Design and Implementation (4) HOLLERER
Prerequisite: Computer Science 24
Not open for credit to students who have completed Computer Science 29.
Repeat Comments: Computer Science 32 is a legal repeat for Computer Science 60.
Advanced topics in object-oriented computing. Topics include encapsulation, data hiding, inheritance, polymorphism, compilation, linking and loading, memory management, and debugging; recent advances in design and development tools, practices, libraries, and operating system support.

40. Foundations of Computer Science (4) SU
Prerequisites: Computer Science 10 or 12; and Mathematics 3C
Propositional predicate logic, set theory, functions and relations, counting, mathematical induction and recursion (generating functions).

48. Computer Science Project (4) CAPPELLO
Prerequisite: Computer Science 32
Team-based project development. Topics include software engineering and professional development practices, interface design, advanced library support; techniques for team-oriented design and development, testing and test-driven development, and software reliability and robustness. Students present and demonstrate their final projects.

50. Programming Project (4) CAPPELLO
Prerequisites: Computer Science 10 and 20.
Reduced credit of 2 units will be given to students who have completed Computer Science 12.
Syntax and semantics of C and C++. Introduction to basic UNIX utilities and tools. Students complete several small projects that exercise their understanding of topics presented in class.

64. Computer Organization and Logic Design (4) ZHENG, FRANKLIN
Prerequisite: Engineering 3 or Computer Science 8 or Computer Science 16; and Mathematics 3C
Not open for credit to students who have completed ECE 15 or ECE 15B or Computer Science 30.
Repeat Comments: Course counts as a legal repeat of Computer Science 39.
Assembly language programming and advanced computer organization; Digital logic design topics including gates, combinational circuits, flip-flops, and the design and analysis of sequential circuits.

65AA-ZZ. Undergraduate Seminar in Computer Science (1-4) STAFF
Prerequisites: Open to pre-computer science and pre-computer engineering majors only; consent of instructor.
Seminars on introductory topics in computer science. These seminars provide an overview of the history, technology, applications, and impact in various areas of computer science, including, A. Foundations, B. Software Systems, C. Programming languages and software engineering, D. Information management, E. Artificial intelligence, F. Networking, G. Security, H. Scientific computing, I. Intelligent and interactive systems, J. History, N. General.

UPPER DIVISION

111. Introduction to Computational Science (4) PETZOLD
Prerequisites: Mathematics 5B; and, Computer Science 12 or 60.
Not open for credit to students who have completed Computer Science 110A.
Introduction to computational science, emphasizing basic numerical algorithms and the informed use of mathematical software. Matrix computation, systems of linear and nonlinear equations, interpolation and zero finding, differential equations, numerical integration. Students learn and use the Matlab language.

123. Overview of Computer Systems: Hardware and Software (4) EL ABBADI
Prerequisites: Computer Science 20 and 60.
Not open for credit to students who have completed Computer Science 30 or Computer Science 170.
Basic computer architecture: CPU, memory, I/O. Basic operating systems concepts: processes, synchronization, memory management, virtual memory, file systems.

130A. Data Structures and Algorithms I (4) GONZALEZ
Prerequisites: Computer Science 20, 40 and 60; PSTAT 120 or ECE 139; open to computer science, computer engineering, and electrical engineering majors only.
The study of data structures and their applications. Correctness proofs and techniques for the design of correct programs. Internal and external searching. Hashing and height balanced trees. Analysis of sorting algorithms. Memory management. Graph traversal techniques and their applications.

130B. Data Structures and Algorithms II (4) GONZALEZ
Prerequisite: Computer Science 130A.
Design and analysis of computer algorithms. Correctness proofs and solutions of recurrence relations. Design techniques: divide and conquer, greedy strategies, dynamic programming, branch and bound, backtracking, and local search. Applications of techniques to problems from several disciplines. NP-completeness.

138. Automata and Formal Languages (4) EGECCIOGLU
Prerequisite: Computer Science 40; open to computer science and computer engineering majors only.
Not open for credit to students who have completed Computer Science 136.
Formal languages; finite automata and regular expressions; properties of regular languages; pushdown automata and context-free grammars; properties of context-free languages; introduction to computability and unsolvability. Introduction to Turing machines and computational complexity.

140. Parallel Scientific Computing (4) GILBERT
Prerequisites: Mathematics 5B and Computer Science 20; and, Computer Science 12 or 60.
Not open for credit to students who have completed Computer Science 110B.
Fundamentals of high performance computing and parallel algorithm design for numerical computation. Topics include parallel architecture and clusters, parallel programming with message-passing libraries and threads, program parallelization methodologies, parallel performance evaluation and optimization, parallel numerical algorithms and applications with different performance trade-offs.

153A. Hardware/Software Interface (4) KRINTZ
Prerequisite: Computer Science 130A with a minimum grade of C-.
Same course as ECE 153A.
The study of the structures employed at the interface of hardware and software in modern computing systems. Introduction to the design and implementation of simple computer architectures, assembly language programming, and software engineering. Topics include processor architecture, assembly language, compiler-compiler techniques for the design of compilers, and computer architecture and hardware.

154. Computer Architecture (4) SHERWOOD, CHONG
Prerequisite: ECE 152A.
Not open for credit to students who have received credit for ECE 154.
Introduction to the architecture of computer systems. Topics include: central processing units, memory systems, channels and controllers, peripheral devices, interrupt systems, software versus hardware trade-offs.

160. Translation of Programming Languages (4) SHERWOOD, BULTAN
Prerequisites: Computer Science 30 or 123; Computer Science 130A or Computer Science 138; open to computer science and computer engineering majors only.
Study of the structure of compilers. Topics include: lexical analysis, syntax analysis including LL and LR parsers; type checking, run-time environments; intermediate code generation, and compiler-compiler construction tools.

162. Programming Languages (4) KRINTZ
Prerequisite: Computer Science 130A; open to computer science and computer engineering majors
only. Concepts of programming languages: scopes, parameter passing, storage management, control flow, exception handling; encapsulation and modularization mechanism; reusability through genericity and inheritance; type systems; procedural, object-oriented, functional, and logic programming languages.

165A. Artificial Intelligence
(4) TURK
Prerequisite: Computer Science 130A.
Introduction to the field of artificial intelligence which attempts to understand and build intelligent systems. Topics include AI programming languages, search, knowledge representation and reasoning, planning, perception, and intelligent agents.

165B. Machine Learning
(4) SMITH
Prerequisite: Computer Science 130A.
Covers the most important techniques of machine learning (ML) and includes discussions of: well-posed learning problems; artificial neural networks; concept learning and general to specific ordering; decision tree learning; genetic algorithms; Bayesian learning; analytical learning; and others.

167. Introduction to Bioinformatics
(4) SINGH
Prerequisite: Computer Science 130B.
Not open to students who have completed Computer Science 190.

170. Operating Systems
(4) AGRAWAL
Prerequisite: Computer Science 130A and, Computer Science 154 or ECE 154 (may be taken concurrently); open to computer science, computer engineering or electrical engineering majors only.
Basic concepts of operating systems. The notion of a process; interprocess communication and synchronization, input-output, file systems, memory management.

171. Distributed Systems
(4) EL ABBADI
Prerequisite: Computer Science 170.
Not open for credit to students who have completed ECE 151.
Distributed systems architecture, distributed programming, message passing, remote procedure calls, group communication, naming and membership problems, asynchrony, logical time, consistency, fault-tolerance, and recovery.

172. Software Engineering
(4) BULTAN
Prerequisites: Computer Science 130A; open to computer science majors only.
Not open for credit to students who have completed Computer Science 189A.
Recommended preparation: Computer Science 189A.

174A. Fundamentals of Database Systems
(4) SU
Prerequisite: Computer Science 130A.
Database system architectures, relational data model, relational algebra, relational calculus, SQL, QBE, query processing, integrity constraints (key constraints, functional integrity), database design, ER and object-oriented data model, functional dependencies, lossless join and dependency preserving decompositions, Boyce-Codd and Third Normal Forms.

174B. Design and Implementation Techniques of Database Systems
(4) SU
Prerequisite: Computer Science 130B.
Queries and processing, optimizer, cost models, execution plans, reordering rules, access methods, spatial indexing, transactions, ACID properties, concurrency control, serializability, two-phase locking, timestamping, logging, checkpointing, transaction abort and commit, crash recovery; distributed databases.

176A. Introduction to Computer Communication Networks
(4) ALMEROTH, HELDING
Prerequisites: PSTAT 120A or ECE 139; open to computer science, computer engineering, and electrical engineering majors only.
Not open for credit to students who have completed Computer Science 176 or ECE 155 or ECE 155A.
Recommended preparation: PSTAT 120B.
Basic concepts in networking, the OSI model, error detection codes, flow control, routing, medium access control, and high-speed networks.

176B. Network Computing
(4) ZHAO, VIGNA
Prerequisite: Computer Science 176A.
Not open for credit to students who have completed ECE 155B or 194W.
Focus on networking technologies used in the Internet. The OSI model is used as a guide for exploring and understanding how the Internet works. Topics include: naming packets in the network, socket programming, and implementing application-layer protocols.

176C. Advanced Topics in Internet Computing
(4) HELDING, ZHENG
Prerequisite: Computer Science 176B.
General overview of wireless and mobile networking, multimedia, security, multicast, quality of service, IPv6, and web caching. During the second half of the course, one or more of the above topics are studied in greater detail.

177. Computer Security
(4) KEMMERER
Prerequisite: Computer Science 170 (may be taken concurrently).
Introduction to the basics of computer security and privacy. Analysis of technical difficulties of producing secure computer information systems that provide guaranteed controlled sharing. Examination and critique of current systems, methods, certification.

178. Introduction to Cryptography
(4) FIOCCOLO
Prerequisites: Computer Science 10 and PSTAT 120A or 121A or equivalent courses.
An introduction to the basic concepts and techniques of cryptography and cryptanalysis. Topics include: the Shannon Theory, classical systems, the Enigma machine, the data encryption standard, public key systems, digital signatures, file security.

180. Computer Graphics
(4) WANG
Prerequisite: Computer Science 130B or consent of instructor.
Overview of OpenGL graphics standard, OpenGL state machine, other 3D graphics libraries, 3D graphics pipeline, 3D transformations and clipping, color model, shading model, shadow algorithms, texturing, curves and curved surfaces, graphics hardware, interaction, and rendering techniques.

181B. Introduction to Computer Vision
(4) WANG, TURK
Prerequisite: Upper-division standing.
Same course as ECE 181B.
Overview of computer vision problems and techniques for analyzing the content images and video. Topics include image formation, edge detection, image segmentation, pattern recognition, texture analysis, optical flow, shape representation and recovery techniques, issues in object recognition, and case studies of practical vision systems.

182. Multimedia Computing
(4) ALMEROTH
Prerequisite: Computer Science 176B.
Not open for credit to students who have completed ECE 160.
Topics include streaming media, conferencing, webcasting, digital libraries, multimedia system architectures, standards (including JPEG and MPEG), and multimedia storage and retrieval. A key emphasis is on using the Internet for delivery of multimedia data.

185. Human-Computer Interaction
(4) HOLLERER
Prerequisite: open to computer science, computer engineering, and electrical engineering majors.
Recommended preparation: proficiency in the Java or C++ programming language, some experience with user interface programming.
The study of human-computer interaction enables system architects to design useful, efficient, and enjoyable computer interfaces. This course teaches the theory, design guidelines, programming practices, and evaluation procedures behind effective human interaction with computers.

186. Theory of Computation
(4) IBARRA
Prerequisite: Computer Science 130; open to computer science majors only.
Not open for credit to students who have completed Mathematics 150A.
Turing machines; computability and unsolvability; computational complexity; intractability and NP-completeness.

189A. Senior Computer Systems Project
(4) BULTAN
Prerequisite: senior standing in Computer Engineering, Electrical Engineering, or Computer Science; consent of instructor.
Not open for credit to students who have completed Computer Science 172.
Student groups design a significant computer-based project. Groups work independently with interaction among groups via interface specifications and informal meetings.

189B. Senior Computer Systems Project
(4) GONZALEZ
Prerequisite: CMPSC 172 or CMPSC 189A; Senior standing in computer engineering, computer science, or electrical engineering; consent of instructor.
Not open for credit to students who have completed ECE 189A or ECE 189B.
Student groups design a significant computer-based project. Multiple groups may cooperate toward one large project. Each group works independently; interaction among groups is via interface specifications and informal meetings. Project for course may be different from that in first course.

190AA-ZZ. Special Topics in Computer Science
(4) STAFF
Prerequisite: consent of instructor.
May be repeated with consent of the department chair.
Courses provide for the study of topics of current interest in computer science.

192. Projects in Computer Science
(4) STAFF
Prerequisite: consent of instructor.
Students must have a minimum 3.0 GPA. May be repeated with consent of the department chair but only 4 units may be applied to the major.
Projects in computer science for advanced undergraduate students.

193. Internship in Industry
(1-4) STAFF
Prerequisites: consent of instructor and department
chair. Not more than 4 units per quarter; may not be used as a field elective and may not be applied to scientific electives. May be repeated with faculty/chair approval to a maximum of 4 units.

Special projects for selected students. Offered in conjunction with selected industrial and research firms under direct faculty supervision. Prior departmental approval required. Written proposal and final report required.

196. Undergraduate Research (2-4) STAFF
Prerequisites: upper-division standing, consent of the instructor.
Must have a minimum 3.0 grade-point average for the preceding three quarters. May be repeated for up to 12 units. No more than 4 units may be applied to departmental electives.

Research opportunities for undergraduate students. Students will be expected to give regular oral presentations, actively participate in a weekly seminar, and prepare at least one written report on their research.

199. Independent Studies in Computer Science (1-4) STAFF
Prerequisites: upper-division standing; must have completed at least two upper-division courses in computer science.
Must have a minimum 3.0 grade-point average for the preceding three quarters. May be repeated with consent of chair. Students are limited to 5 units per quarter and 30 units total in all 199/199 courses combined.

Independent study in computer science for advanced students.

GRADUATE COURSES

209. Logic and Applications in Computer Science (4) SU
Propositional logic, first order logic, completeness, compactness, incompleteness, undecidability; selected topics from finite model theory, theorem proving, logic programming, program verification, databases, computational complexity.

211A. Matrix Analysis and Computation (4) STAFF
Prerequisite: consent of instructor.
Same course as ECE 210A, ME 210A, Mathematics 206A, Chemical Engineering 211A, and Geology 251A. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language.

Graduate level-matrix theory with introduction to matrix computations. SVD’s, pseudoinverses, variations, characterization of eigenvalues, perturbation theory, direct and iterative methods for matrix computations.

211B. Numerical Simulation (4) PETZOLD
Prerequisite: consent of instructor.
Same course as ECE 210B, ME 210B, Mathematics 206B, Chemical Engineering 211B, and Geology 251B. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language.

211C. Numerical Solution of Partial Differential Equations—Finite Difference Methods (4) STAFF
Prerequisite: consent of instructor.
Same course as ECE 210C, ME 210C, Mathematics 206C, Chemical Engineering 211C, and Geology 251C. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language.

Finite difference methods for hyperbolic, parabolic, and elliptic PDEs, with application to problems in science and engineering. Convergence, consistency, order and stability of finite difference methods; Dissipation and dispersion; Finite volume methods; Software design and adaptivity.

211D. Numerical Solution of Partial Differential Equations—Finite Element Methods (4) STAFF
Prerequisite: consent of instructor.
Same course as ECE 210D, ME 210D, Mathematics 206D, Chemical Engineering 211D, and Geology 251D. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language.

216. Level Set Methods (4) GIBOU
Prerequisite: Computer Science 211C, or Chemical Engineering 211C, or ECE 210C, or ME 210C.
Same course as Chemical Engineering 226, ECE 226, and ME 216.
Mathematical description of the level set method and design of the numerical methods used in its implementations (ENO-WENO, Godunov, Lax-Friedrich, etc.). Introduction to Fluid Method. Applications in CFD, Materials Sciences, Computer Vision and Computer Graphics.

220. Theory of Computation and Complexity (4) IBARRA
Prerequisite: Computer Science 186.
Topics include: models of computation; time and space complexity classes (e.g., P, NP, Co-NP, and PSPACE), efficient reducibilities, complete problems; lower bounds; the polynomial hierarchy.

225. Information Theory (4) VAN DAM
Prerequisites: ECE 140 or PSTAT 120A-B.
Same course as ECE 205A.
Entropy, mutual information, and Shannon's coding theorems; lossless source coding, Huffman, Shannon-Fano-Elias, and arithmetic codes; Channel capacity; rate-distortion theory, and lossy source coding; source-channel coding, algorithmic complexity and information; applications of information theory in various fields.

230. Approximations, NP-Completeness and Algorithms (4) GONZALEZ
Prerequisites: Computer Science 130A-B; Computer Science 130A-B.
Epsilon approximations, PTAS and FPTAS, efficient reducibilities, complete problems; polynomial transformations, Turing reductions, strong NP-completeness, NP-hardness and inapproximability results. Topics in algorithms include: amortized analysis, advanced graph algorithms and data structures.

231. Topics in Combinatorial Algorithms (4) SURI
Prerequisite: Computer Science 130B.
Advanced topics in algorithm design, including network flows, matchings in graphs, linear and integer programming.

234. Randomized Algorithms (4) EGECUIGLE
Prerequisite: Computer Science 186.
Randomized algorithms and applications: Las Vegas and Monte Carlo type algorithms, randomized algorithms for graph problems, matchings, data structures, problems from computational geometry, number theory and primality testing, distributed algorithms, hashing and fingerprinting, random generation, Markov chains and rapid mixing.

235. Computational Geometry (4) SURI
Prerequisites: Computer Science 130A-B.
Algorithms and lower bound techniques in computational geometry; decision tree models of computation; geometric searching; point location and range search; convex hull and maxima of a point set; proximity algorithms; geometric intersections.

240A. Applied Parallel Computing (4) GILBERT
Prerequisites: Computer Science 154 and 160.
Interdisciplinary introduction to applied parallel computing on modern supercomputers. Topics include application-oriented architectural issues, MPI, parallel MATLAB, and parallel numerical algorithms. A course project emphasizes understanding the realities and myths of what is possible on the world's fastest machines.

240B. Parallel Computing and Parallelization (4) YANG
Prerequisites: Computer Science 130A and 160.
Parallel programming: representation of parallelism, program dependence analysis, loop transformation; program and data partitioning, locality optimization; task scheduling and load balancing; parallelizing compilers and run-time support.

254. Advanced Computer Architecture (4) SHERWOOD
Prerequisite: Computer Science 154 or ECE 154.
Advanced instruction set architectures, pipelining, dynamic scheduling, branch prediction, superscalar issue, out-of-order execution, memory-hierarchy design, advanced cache architectures, and prefetching. Several real designs are dissected and simulators are developed for performing quantitative evaluations of design decisions.

260. Advanced Topics in Translation (4) STAFF
Prerequisites: Computer Science 160 and 162.
Theoretical aspects of translation. Topics include: data flow analysis; control flow analysis; interprocedural analysis; optimization; type systems.

263. Modern Programming Languages and Their Implementation (4) KRINTZ
Prerequisites: Computer Science 154, 160, and 162.
Recommended preparation: Computer Science 260.
Topics central to modern programming languages and their implementation: garbage collection; memory system performance; characteristics and optimization of object-oriented languages; type systems and type inference; run-time compilation.

265. Advanced Topics in Machine Intelligence (4) KEMMERER
Prerequisites: Computer Science 165A.
May be repeated for credit.
Topics covered include advanced programming techniques for representing and reasoning about complex objects and various applications of such techniques, including expert systems, natural language processors, image understanding systems, and machine learning.

266. Formal Specification and Verification (4) REMER
Prerequisites: Computer Science 130A-B; Computer Science 186.
Introduction to existing specification and verification systems, and the underlying theory and techniques of verifying algorithms with respect to specifications. This subject can be considered as the combination of specification and verification techniques, programming language semantics, and formal abstraction.

267. Automated Verification (4) BULTAN
Prerequisites: Computer Science 130A-B and 138.
Covers automated verification algorithms and tools. Topics include: temporal logics, fixpoint characterizations of temporal properties, model checking, symbolic verification, explicit-state verification, verification using automated theorem provers, automated abstraction.

270. Operating Systems (4) WOLSKI
Prerequisite: Computer Science 170.
Develop an understanding of operating systems...
and operating systems research at both a conceptual level and from an engineering perspective. Fundamental design principles, culled primarily from the research literature, motivate an analysis of previous and current systems. This analysis is further validated through empirical investigation.

271. Advanced Topics in Distributed Systems
   (4) EL ABBADI
   Prerequisite: Computer Science 170.
   Course covers the fundamental problems in distributed systems and the various tools used to solve them. Of primary interest is the issue of fault-tolerance. Topics include event ordering, clocks, global states, agreement, fault tolerance, and peer-to-peer systems.

272. Software Engineering
   (4) BULDIN
   Prerequisite: Computer Science 172.
   Principles of software engineering disciplines emphasizing requirements analysis, specification design, coding, testing and correctness proofs, maintenance, and management. Students will use a number of software engineering tools.

273. Data and Knowledge Bases
   (4) SU
   Prerequisite: Computer Science 186.
   The focus is on the study of relational and post-relational data models and their query languages of different styles (algebraic, calculus, and deductive): complexity, expressive power, optimization, and database design.

274. Advanced Topics in Database Systems
   (4) AGRAWAL, EL ABBADI
   Prerequisite: Computer Science 170.
   Topics include: data models, semantics, data integrity; database design; serializability theory, concurrency control, recovery, distributed databases.

276. Advanced Topics in Networking
   (4) BULDIN, ZHAO
   Prerequisite: Computer Science 176A or 176B.
   Focuses on advanced topics in networking. Topics may include, but are not limited to: Internet analysis, routing techniques, multimedia, approaches for network performance enhancements, and communication over new technologies.

279. Advanced Topics in Security
   (4) VIGNA
   Prerequisite: Computer Science 177.

280. Computer Graphics
   (4) HOLLERER
   Prerequisite: Computer Science 180.
   Special topics in computer graphics including: curves and curved surfaces, visual perception of colors and color models; shading models; shadow generation; texture mapping; solid textures; stereographics; helmet-mounted display; graphics hardware/architecture; solid modeling, physically-based modeling, fractals and graphs, volume rendering; scientific visualization.

281B. Advanced Topics in Computer Vision
   (4) WANG, TURK
   Requirement as ECE 281B.
   Advanced topics in computer vision: image sequence analysis, spatio-temporal filtering, camera calibration and hand-eye coordination, robot navigation, shape representation, physically-based modeling, regularization theory, multi-sensory fusion, biological models, expert vision systems, and other topics selected from recent research papers.

284. Mobile Computing
   (4) BULDIN
   Prerequisite: Computer Science 176A or 176B.
   Recommended preparation: Computer Science 276.
   Focuses on mobile computing. Topics may include, but are not limited to: mobile network characteristics, types of mobile networks, challenges and solutions in mobile computing, and power conservation techniques.

596. Directed Research
   (2-12) STAFF
   Research, either experimental or theoretical, may be undertaken by properly qualified graduate students under the direction of a faculty member.

597. Individual Studies for M.S.
   Comprehensive Examinations and Ph.D. Examinations
   (1-12) STAFF
   No unit credit allowed toward advanced degree. Enrollment limited to 24 units per examination. Maximum of 12 units per quarter. Instructor is normally student's major professor or chair of doctoral committee. S/U grading.
   Individual studies for M.S. comprehensive examination and Ph.D. examinations.

598. Master's Thesis Research and Preparation
   (1-12) STAFF
   Prerequisite: consent of graduate advisor.
   For research underlying the thesis and writing of the thesis.

599. Ph.D. Dissertation Research and Preparation
   (1-12) STAFF
   Prerequisite: consent of chair of student's doctoral committee.
   Research and preparation of dissertation.

Electrical and Computer Engineering

Department of Electrical and Computer Engineering, Building 380, Room 101;
Telephone (805) 893-2269 or (805) 893-3821
Web site: www.ece.ucsb.edu

Chair: Jerry Gibson
Vice Chair: Joao Hespanha

Faculty
Kauatst Banerjee, Ph.D., UC Berkeley, Professor (high performance VLSI and mixed signal system-on-chip designs and their design automation methods; single electron transistors; 3D and optoelectronic integration)
Daniel J. Blumenthal, Ph.D., University of Colorado at Boulder, Professor (fiber-optic networks, wavelength and subcarrier division multiplexing, photonic packet switching, signal processing in semiconductor optical devices, wavelength conversion, microwave photonics)
John E. Bowers, Ph.D., Stanford University, Professor (high-speed photonic and electronic devices and integrated circuits, fiber optic communication, semiconductors, laser physics and mode-locking phenomena, compound semiconductor materials and processing)
Forrest D. Brewer, Ph.D., University of Illinois at Urbana-Champaign, Professor (VLSI and computer system design automation, theory of design and design representations, symbolic techniques in high level synthesis)
Elliott Brown, Ph.D., California Institute of Technology, Professor (RF system modeling and design; solid state and biomedical ultrasonics; thermal management of solid state power devices)
Steven E. Butner, Ph.D., Stanford University, Professor (computer architecture, VLSI design of CMOS and gallium-arsenide ICs with emphasis on distributed organizations and fault-tolerant structures)

Shivkumar Chandrasekaran, Ph.D., Yale University, Professor (numerical analysis, numerical linear algebra, scientific computation)

Kwang-Ting (Tim) Cheng, Ph.D., UC Berkeley, Professor (design automation, VLSI testing, design synthesis, design verification, algorithms)

Larry A. Coldren, Ph.D., Stanford University, Kavli Professor of Optoelectronics and Sensors, Director of Optoelectronics Technology Center (semiconductor integrated optoelectronics, vertical-cavity lasers, widely-tunable lasers, optical fiber communication, growth and planar processing techniques) *1

Nadir Dagli, Ph.D., Massachusetts Institute of Technology, Professor (design, fabrication, and modeling of photonic integrated circuits, ultrafast electrooptic modulators, solid state microwave and millimeter wave devices; experimental study of ballistic transport in quantum confined structures) *1

Steven P. DenBaars, Ph.D., University of Southern California, Professor (metalorganic vapor phase epitaxy, optoelectronic materials, compound semiconductors, indium phosphide and gallium nitride, photonic devices) *1

Jerry Gibson, Ph.D., Southern Methodist University, Professor (digital signal processing, data, speech, image and video compression, and communications via multi-use networks, data embedding, adaptive filtering)

Arthur C. Gossard, Ph.D., UC Berkeley, Professor (epitaxial crystal growth, artificially structured materials, semiconductor structures for optical and electronic devices, quantum confinement structures) *1

Joao Hespanha, Ph.D., Yale University, Professor (hybrid and switched systems, supervisory control, control of computer networks, probabilistic games, the use of vision in feedback control)

Evelyn Hu, Ph.D., Columbia University, Professor (high-resolution fabrication techniques for semiconductor device structures, process-related materials damage, contact/ interface studies, superconductivity) *1

Ronald Itis, Ph.D., UC San Diego, Professor (digital spread spectrum communications, spectral estimation and adaptive filtering)

Herbert Kroemer, Dr. rer. nat., University of Göttingen, Donald W. Whittier Professor in Electrical Engineering, 2000 Physics Nobel Laureate (general solid-state and device physics, heterostructures, tunneling, polar beam epitaxy, compound semiconductor materials and devices, superconductivity) *1

Hua Lee, Ph.D., UC Santa Barbara, Professor (image system optimization, high-performance image formation algorithms, synthetic-aperture radar and sonar systems, acoustic microscopy, microwave nondestructive evaluation, dynamic vision systems)

Michael Liebling, Ph.D., École Polytechnique Fédérale de Lausanne, Assistant Professor (image processing, optical microscopy, In Vivo biological imaging)

Upamanyu Madhow, Ph.D., University of Illinois, Professor (spread-spectrum and multiple-access communications, space-time coding, and internet protocols)

B.S. Manjunath, Ph.D., University of Southern California, Professor (image processing, computer vision, pattern recognition, neural networks, learning algorithms, content based search in multimedia databases)

Malgorzata Marek-Sadowska, Ph.D., Technical University of Warsaw, Poland, Professor (design automation, computer-aided design, integrated circuit layout, logic synthesis)

P. Michael Melliar-Smith, Ph.D., University of Cambridge, Professor (fault tolerance, formal specification and verification, distributed systems, communication networks and protocols, asynchronous systems)

Umesh Mishra, Ph.D., Cornell University, Professor (high-speed transistors, digital semiconductor device physics, quantum electronics, wide band gap materials and devices, design and fabrication of millimeter-wave devices, in situ processing and integration techniques)

Behrooz Parhame, Ph.D., UC Los Angeles, Professor (parallel architectures and algorithms, computer arithmetic, computer design, dependable and fault-tolerant computing)

Pierre M. Petroff, Ph.D., UC Berkeley, Professor (self assembling nanostructures in semiconductors and ferromagnetic materials, spectroscopy of nanostructures, nanostructure devices, semiconductor device reliability) *1

Lawrence Raben, Ph.D., Massachusetts Institute of Technology, Professor (digital signal processing: intelligent human-machine interaction, digital signal processing, speech processing and recognition, telecommunications)

Volkan Rodoplu, Ph.D., Stanford University, Associate Professor (wireless networks, energy-efficient and device-adaptive communications)

Mark J.W. Rodwell, Ph.D., Stanford University, Professor, Director of Compound Semiconductor Research Laboratories, Director of National Nanofabrication Users Network (heterojunction bipolar transistors, high frequency integrated circuit design, electronics beyond 100 GHz)

Kenneth Rose, Ph.D., California Institute of Technology, Professor, Co-Director of Center for Information Processing Research (information theory, source and channel coding, imaging, communications, pattern recognition)

John J. Shynk, Ph.D., Stanford University, Professor (adaptive filtering, array processing, wireless communications, blind equalization, neural networks)

Roy Smith, Ph.D., California Institute of Technology, Professor (robust control with an emphasis on the modeling, identification, and control of uncertain systems, applications and experimental work including process control, flexible structures, automotive systems, semiconductor manufacturing, levitated magnetic bearings and dynamic aeromaneuvering of interplanetary spacecraft)

Andrew Teel, Ph.D., UC Berkeley, Professor (control design and analysis for nonlinear dynamical systems, input-output methods, actuator nonlinearities, applications to aerospace problems)

Luke Theogarajan, Ph.D., Massachusetts Institute of Technology, Assistant Professor (low-power analog VLSI, biomimetic nanosystems, neural prostheses, biosensors, block co-polymer synthesis, self-assembly, and microfabrication)

Li C. Wang, Ph.D., University of Texas, Austin, Associate Professor (design verification, testing, computer-aided design of microprocessors)

Pochi Yeh, Ph.D., California Institute of Technology, Professor (phase conjugation, nonlinear optics, dynamic holography, optical computing, optical interconnection, neural networks, and image processing)

Robert York, Ph.D., Cornell University, Professor (high-power/high-frequency devices and circuits, quasi-optics, antennas, electromagnetic theory, nonlinear circuits and dynamics, microwave photonics)

Patrick Yue, Ph.D., Stanford University, Associate Professor (high-speed CMOS IC design, cell-based RF CAD methodology and integrated biomedical sensors)

Emeriti Faculty

Jorge R. Fontana, Ph.D., Stanford University, Professor Emeritus (quantum electronics, particularly lasers, interaction with charged particles)

Allen Gersho, Ph.D., Cornell University, Professor, Director of Center for Information Processing Research (speech, audio, image, and video compression, quantization and signal compression techniques, and speech processing)

Glenn R. Heidbreder, D. Eng., Yale University, Professor Emeritus (communication theory, signal processing in radar and digital communication systems; digital image processing)

Petar V. Kokotovic, Ph.D., USSR Academy of Sciences, Professor, Director of Center for Control Engineering and Computation, Director of Center for Robust Nonlinear Control of Aeroengines (sensitivity analysis, singular perturbations, large-scale systems, non-linear systems, adaptive control, automotive and jet engine control)

Stephen I. Long, Ph.D., Cornell University, Professor (semiconductor devices and integrated circuits for high speed digital and RF analog applications)

George L. Matthaei, Ph.D., Stanford University, Professor Emeritus (circuit design techniques for passive and active microwave, millimeter-wave and optical integrated circuits, circuit problems of high-speed digital integrated circuits)

James L. Merz, Ph.D., Harvard University, Professor Emeritus (optical properties of semiconductors, including guided-wave and integrated optical devices, semiconductor lasers, optoelectronic devices, native defects in semiconductors, low-dimensional quantum structures) *1

Sanjit K. Mitra, Ph.D., UC Berkeley, Professor (digital signal and image processing, computer-aided design and optimization)

Venkatesh Narayanamurti, Ph.D.,
Cornell University, Professor Emeritus (transport, semiconductor heterostructures, nanostructures, scanning tunneling microscopy and ballistic electron emission microscopy, phonon physics)

Philip F. Orduz, Ph. D., Yale University, Professor Emeritus (general device physics, solar cells, charge-coupled devices)

Ian B. Rhodes, Ph.D., Stanford University, Professor (mathematical system theory and its applications with emphasis on stochastic control, communication, and optimization problems, especially those involving decentralized information structures or parallel computational structures)

John G. Skalnik, D. Eng., Yale University, Professor Emeritus (solar cells, general device technology, effects of non-ideal structures)

Glen Wade, Ph.D., Stanford University, Professor Emeritus (optical, microwave, and acoustical systems theory and experiments, with emphasis on acoustic imaging; computer processing; enhancement of images; computer image reconstruction)

Roger C. Wood, Ph.D., UC Los Angeles, Professor Emeritus (computer system modeling, design, and analysis, computer architecture, and instructional use of computers) *2

*1 Joint appointment with the Department of Materials.

*2 Joint appointment with the Department of Computer Science.

Affiliated Faculty

David Awschalom, Ph.D. (Physics)

Elizabeth Belding, Ph.D. (Computer Science)

Francesco Bullo, Ph.D. (Mechanical Engineering)

Francis Doyle, Ph.D., (Chemical Engineering)

Oscar Ibarra, Ph.D., (Computer Science)

Mustafa Khammash, Ph.D. (Mechanical Engineering)

Chandra Krintz, Ph.D. (Computer Science)

Eric McFarland, Ph.D., (Chemical Engineering)

Shuji Nakamura, Ph.D. (Materials)

Bradley E. Paden, Ph.D. (Mechanical Engineering)

Tim Sherwood, Ph.D. (Computer Science)

**E**lectrical and Computer Engineering is a broad field encompassing many diverse areas such as computers and digital systems, control, communications, computer engineering, electronics, signal processing, electromagnetics, electro-optics, physics and fabrication of electronic and photonics devices. As in most areas of engineering, knowledge of mathematics and the natural sciences is combined with engineering fundamentals and applied to the theory, design, analysis, and implementation of devices and systems for the benefit of society.

The Department of Electrical and Computer Engineering offers programs leading to the degrees of bachelor of science in electrical engineering or bachelor of science in computer engineering. (See please the “Computer Engineering” section for further information.) The undergraduate curriculum in electrical engineering is designed to provide students with a solid background in mathematics, physical sciences, and traditional electrical engineering topics as presented above. A wide range of program options, including computer engineering: microwaves; communications, control, and signal processing; and semiconductor devices and applications, is offered. The department’s Electrical Engineering undergraduate program is accredited by the Engineering Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012 – telephone: (410) 347-7700. It is one of the degrees recognized in all fifty states as leading to eligibility for registration as a professional engineer.

Graduate studies leading to the M.S. and Ph.D. degrees in Electrical and Computer Engineering are offered in three major areas of specialization: computer engineering; communications, control, and signal processing; and electronics and photonics.

Our department offers educational opportunities at an advanced level, leading at the M.S. level to increased career opportunities in the foregoing positions, and at the Ph.D. level to careers in research and teaching and positions of professional leadership.

Students who complete a major in electrical engineering may be eligible to pursue a California teaching credential. Interested students should consult the credential advisor in the Graduate School of Education.

Students who complete a major in electrical engineering must complete a course in engineering ethics. Required of all undergraduates.

\*We expect our graduates to make positive contributions to society in fields including, but not limited to, engineering.

Program Outcomes

1.Acquired strong basic knowledge and skills in the fundamental areas of mathematics, science, and electrical engineering that are required to support specialized professional training at the advanced level and to provide necessary breadth to the student's overall program of studies. This provides the basis for lifelong learning.

2. Experienced in-depth training in state-of-the-art specialty areas in electrical engineering. This is implemented through our senior electives. Students are required to take two sequences of at least two courses each at the senior level.

3. Benefited from imaginative and highly supportive laboratory experiences where appropriate throughout the program. The laboratory experience will be closely integrated with coursework and will make use of up-to-date instrumentation and computing facilities. Students should experience both hardware-oriented and simulation-oriented exercises.

4. Experienced design-oriented challenges that exercise and integrate skills and knowledge acquired in several courses. These may include design of components or subsystems with performance specifications. Graduates should be able to demonstrate an ability to design and conduct experiments as well as analyze the results.

5. Learned to function well in teams. Also, students must develop communication skills, written and oral, both through team and classroom experiences. Skills including written reports, webpage preparation, and public presentations are required.

6. Completed a well-rounded and balanced education through required studies in selected areas of fine arts, humanities, and social sciences. This provides for the ability to understand the impact of engineering solutions in a global and societal context. A course in engineering ethics is also required of all undergraduates.
Undergraduate Program
Note: Schedules should be planned to meet both General Education and major require-
ments. Detailed descriptions of these require-
ments are presented in the College of Engineer-
ing Announcement and General Education
booklet.
A minimum of 193 units is required for gradu-
ation.

Bachelor of Science—Electrical Engineering
Preparation for the major
All undergraduate majors in the department are required to meet a set of minimum unit and
grade-point requirements and a set of General
Education requirements which are common
to all undergraduate majors in the College of
Engineering. In addition, required prepara-
tion for the major consists of the following
lower-division courses (or their equivalents
if taken elsewhere): Engineering 3; Electrical
and Computer Engineering 2A-B-C and 15A;
Chemistry 1A-B or 2A-B, 1AL-BL or 2AC-BC;
Mathematics 3A-B-C and 5A-B-C; Physics 1, 2,
3, 4, 5, 3L, 4L, 5L; and Computer Science 16 and
24. Qualified students may substitute Physics
21-25 for Physics 1-3 after obtaining permission
from the Physics Department.
The department academic advisor can sug-
gest a recommended study plan for electrical
engineering freshmen and sophomores. Each
student is assigned a departmental faculty
advisor who must be consulted in planning the
junior and senior year programs.

Upper-division major
The upper-division requirements consist of a set
of required courses and a minimum of 32 units
(8 classes) of additional departmental elective
courses selected from a wide variety of special-
ized courses. All departmental elective programs
must contain at least two sequences, each con-
sisting of two or more related courses. Required
upper-division courses for the major are: Elec-
trical and Computer Engineering 130A-B, 132,
134, 137A-B, 139, 152A; and Engineering 101.
The required 32 units (8 courses) of de-
partmental electives are taken primarily in the
senior year, and they permit students to
develop depth in specialty areas of their choice.
A student’s elective course program must be
approved by a departmental faculty advisor.
The advisor will check the program to ensure
satisfaction of the departmental requirements.
A wide variety of elective programs will be
considered acceptable.
Three matters should be noted: (1) students
who fail to attain a grade-point average of
at least 2.0 in the major may be denied the
privilege of continuing in the major, (2) a large
majority of electrical and computer engineer-
ing courses have prerequisites which must be
completed successfully. Successful completion
of prerequisite courses means receiving a grade
of C- or better in prerequisite courses except
for Mathematics 3A-B-C and Mathematics 5A
and 5B which require a grade of C or better to
apply these courses as prerequisites, (3) courses
required for the pre-major or major, inside
or outside of the Department of Electrical
Engineering, cannot be taken for the passed/not
passed grading option. They must be taken for
letter grades.

Bachelor of Science—Computer Engineering
This major is offered jointly by the Depart-
ment of Computer Science and the Department
of Electrical and Computer Engineering. For
information about this major, see page 13.

Electrical and Computer Engineering Courses
Many of the ECE courses are restricted to ECE
majors only. Please check the quarterly Schedule
of Classes. Instructor and quarter offered are
subject to change.

LOWER DIVISION
1. Ten Puzzling Problems in Computer Engineering
   (1) PARHAM
   Prerequisite: open to pre-computer engineering only.
   Seminar, 1 hour.
   Gaining familiarity with, and motivation to study,
   the field of computer engineering, through puzzle-like
   problems that represent a range of challenges facing
   computer engineers in their daily problem-solving
   efforts and at the frontiers of research.
2A. Circuits, Devices, and Systems
   (5) YORK
   Prerequisites: Mathematics 3A-B-C with a minimum
   grade of C and, Mathematics 5A with a minimum
   grade of C (may be taken concurrently); Physics 3 or
   23 (may be taken concurrently); open to electrical
   engineering, computer engineering, and pre-computer
   engineering majors only. Lecture, 3 hours; laboratory,
   4 hours.
   Introduction to basic circuit analysis. KCL, KVL,
   nodal analysis, superposition, independent and
   dependent sources; diodes and I-V characteristics;
   basic op-amp circuits; first-order transient analysis;
   AC analysis and phasors. Introduction to the use of test
   instruments.
2B. Circuits, Devices, and Systems
   (5) YORK
   Prerequisites: ECE 2A with a grade of C- or better;
   open to electrical engineering, computer engineering,
   and pre-computer engineering majors only. Lecture,
   3 hours; laboratory, 4 hours.
   Second order circuits. Laplace transform and
   solution of steady state and transient circuit problems
   in the s-domain; Bode plots; Fourier series and
   transforms; filters. Transistor as a switch; load lines;
   simple logic gates; latches and flip-flops.
2C. Circuits, Devices, and Systems
   (5) YORK
   Prerequisites: ECE 2B with a grade of C or better (may
   be taken concurrently); open to electrical engineering,
   computer engineering, and pre-computer engineering
   majors only. Lecture, 3 hours; laboratory, 4 hours.
   Two-port network parameters; small-signal models
   of nonlinear devices; transistor amplifier circuits;
   frequency response of amplifiers; non-ideal op-amps;
   modulation, bandwidth, signals; Fourier analysis.
4. Design Project for Freshmen
   (4) STAFF
   Prerequisites: Mathematics 3A-B-C and Physics 1 with
   minimum grade of C; Engineering 3 with a minimum
   grade of C-; Lecture, 3 hours; laboratory, 3 hours.
   This first course on design gives an intuitive
   introduction to engineering design. Learn how to take
   an idea of a system and convert it to a working model.
   Use hardware and software for building a system.
15A. Fundamentals of Logic Design
   (3) MARSEK-SADOWSKA
   Prerequisites: ECE 2A with a minimum grade of C;
   open to electrical engineering, computer engineering,
   and pre-computer engineering majors only.
   Not open for credit to students who have completed
   ECE 15E. Lecture, 3 hours; discussion, 1 hour.
   Boolean algebra, logic of propositions, minterm
   and maxterm expansions, Karnaugh maps, Quine-
   McCluskey methods, multi-level circuits, combina-
   tional circuit design and simulation, multiplexers, decoders,
   programmable logic devices.
15B. Computer Organization
   (3) STAFF
   Prerequisites: ECE 15A with a minimum grade of C;
   open to electrical engineering, computer engineering,
   and pre-computer engineering majors only.
   Not open for credit to students who have completed
   Computer Science 30 or ECE 15. Lecture, 3 hours;
   discussion, 1 hour.
   Basic memory and processor organization,
   instruction set architecture, assembly language
   programming, number systems, arithmetic, data
   transfer and control flow instructions, procedures,
   memory management, program execution.
94AA- ZZ. Group Studies in Electrical and Computer Engineering
   (1-4) STAFF
   Prerequisite: consent of instructor.
   Group studies intended for small number of
   advanced students who share an interest in a topic not
   included in the regular departmental curriculum.

UPPER DIVISION
121A-B. The Practice of Science
   (3-4) HU, AWSCHALOM
   Prerequisites: consent of instructor (for 121A): ECE
   121A or Physics 121A; consent of instructor (for
   121B).
   Same course as Physics 121A-B. Lecture, 3 hours
   (for 121A); Lecture, 4 hours (for 121B).
   Provides experience in pursuing careers within
   science and engineering through discussions with
   researchers, lecturers on ethics, funding, intellectual
   property, and commercial innovation. Students prepare
   a focused research project that is pursued in the
   second quarter of the course.
124A. VLSI Principles
   (4) BANERJEE
   Prerequisites: ECE 132 (may be taken concurrently)
   and ECE 152A with a minimum grade of C- in both.
   Lecture, 3 hours; laboratory, 3 hours.
   Introduction to CMOS digital VLSI design:
   CMOS devices and manufacturing technology;
   transistor level design of static and dynamic logic
   gates and components and interconnections; circuit
   characterization: delay, noise margins, and power
   dissipation; combinational and sequential circuits;
   arithmetic operations and algorithms.
124B. Integrated Circuit Design and Fabrication
   (4) BOWERS
   Prerequisite: ECE 132 with a minimum grade of C-.
   Lecture, 4 hours; laboratory, 3 hours.
   Theory, fabrication, and characterization of solid
   state devices including P-N junctions, capacitors,
   bipolar and MOS devices. Devices are fabricated
   using modern VLSI processing techniques including
   lithography, oxidation, diffusion, and evaporation.
   Physics and performance of processing steps are
   discussed and analyzed.
124C. Integrated Circuit Design and Fabrication
   (4) BOWERS
   Prerequisites: ECE 124B and ECE 137A with a
   minimum grade of C- in all. Lecture, 4 hours;
   laboratory, 3 hours.
   Design, simulation, fabrication, and
   characterization of NMOS integrated circuits. Circuit
   design and layout is performed using commercial
   layout software. Circuits are fabricated using modern
   VLSI processing techniques. Circuit and discrete device
   electrical performance are analyzed.
124D. VLSI Architecture and Design
   (4) BREWER
   Prerequisite: ECE 124A with a minimum grade of C-.
Lecture, 3 hours; laboratory, 2 hours.

Practical issues in VLSI circuit design, path minimizations, clocking and timing standards, electrical packaging for high-speed and high-performance design. On-chip noise and crosstalk, clock and power distribution, architectural and circuit design constraints, reliability, non-clocked, locked and self-timed logic gates, clocked storage elements; high-speed components, PLLs and DLLs; clock and power distribution; memory systems; signaling and IO design; low-power design.

130A. Signal Analysis and Processing
(4) MADHOW
Prerequisites: Mathematics 5A and ECE 2B with a minimum grade of C- in both. Open to EE and computer engineering majors only. Lecture, 3 hours. Discussion, 2 hours.

130B. Signal Analysis and Processing
(4) CHANDRASKARAN
Prerequisites: ECE 130A with a grade of C- or better; open to EE and computer engineering majors only. Lecture, 3 hours. Discussion, 2 hours.

Analysis of discrete time linear systems in the time and frequency domains. 2 transforms. Discrete Fourier transforms. Sampling and aliasing.

130C. Signal Analysis and Processing
(4) CHANDRASKARAN
Prerequisites: ECE 130A-B with a minimum grade of C- in both. Lecture, 3 hours. Discussion, 2 hours.

Basic techniques for the analysis of linear models in electrical engineering: Gaussian elimination, vector spaces and linear equations, orthogonality, determinants, eigenvalues and eigenvectors, systems of linear differential equations, positive definite matrices, singular value decomposition.

132. Introduction to Solid State Electronic Devices
(4) MISHRA
Prerequisites: Physics 4 or 24 with a minimum grade of C-; Mathematics 5A with a minimum grade of C; and ECE 2B-B (may be taken concurrently) with a minimum grade of C- in both; open to computer engineering majors only. Lecture, 3 hours. Discussion, 2 hours.

Electrons and holes in semiconductors; doping (P and N); state occupation statistics, transport properties of electrons and holes; P-N junction diodes; I-V, C-V, N); state occupation statistics, transport properties of C- in both; open to EE majors only. Lecture, 3 hours; laboratory, 3 hours.

Analysis and design of single stage and multistage transistor circuits including biasing, gain, impedances and maximum signal levels.

137B. Circuits and Electronics II
(4) RODWELL
Prerequisites: ECE 2C and 3A with a minimum grade of C- in both; open to EE majors only. Lecture, 3 hours; laboratory, 3 hours.

Analysis and design of single stage and multistage transistor circuits at low and high frequencies. Transient response. Analysis and design of feedback circuits. Stability criteria.

139. Probability and Statistics
(4) ILTS
Prerequisites: Open to Electrical Engineering, Computer Engineering and pre-Computer Engineering majors only. Lecture, 3 hours, discussion, 2 hours.

Fundamentals of probability, conditional probability, Bayes rule, random variables, functions of random variables, expectation, and high-order moments, Markov chains, hypothesis testing.

140. Random Processes for Engineering
(4) ILTS
Prerequisites: ECE 130A-B and 139 each with a minimum grade of C- in both; open to EE majors only. Lecture, 3 hours; discussion, 2 hours.

Random processes, characteristic functions, central limit theorem, spectral analysis, linear systems with random inputs, representation of bandlimited processes, Poisson process, simple queueing systems.

141. Introduction To Nanoelectro-mechanical and Microelectromechanical Systems(NEMS/MEMS)
(3) PENNATUR, TURNER
Prerequisites: ME 158A, ME 151A (may be concurrent); or ECE 130A and 137A with a minimum grade of C- in both. Lecture, 3 hours. Discussion, 2 hours.

Single course as ME 151A. Lecture, 2 hours; laboratory, 6 hours.

Introduction to nano- and microtechnology. Scaling laws and nanoscale physics are stressed. Individual subjects at the nanoscale including materials, mechanics, photonics, electronics, and fluidics will be described, with an emphasis on differences of behavior at the nanoscale and real-world examples.

141B. Semiconductor Processing and Device Characterization with Laboratory
(4) PENNATUR
Prerequisites: ME 141A or ECE 141A; and, Chemistry 18-B. Same course as ME 141B. Lecture, 2 hours; laboratory, 6 hours.

Lectures and laboratory on semiconductor processing for MEMS. Description and analysis for key semiconductors and equipment used for MEMS. Design and fabrication of MEMS capacitor-actuator and accelerometers; includes a description of MEMS characterization tools.

141C. Introduction to Microfluidics and BioMEMS
(3) MEINHARDT
Prerequisites: ME 141A or ECE 141A; open to ME and EE majors only. Lecture, 3 hours.

Introduces physical phenomena associated with microscale/nanoscale fluid mechanics, microfluids, and bioMEMS. Analytical methods and numerical simulation tools are used for analysis of microfluids.

144. Electromagnetic Fields and Waves
(4) YORK
Prerequisites: ECE 134 with a minimum grade of C-. Lecture, 3 hours; laboratory, 3 hours.

Waves on transmission lines, Maxwell's equations, skin effect, propagation and reflection of electromagnetic waves, microwave integrated circuit principles, metal and dielectric waveguides, resonant cavities, antennas. Microwave and optical device examples and experience with modern microwave and CAD software.
of control systems.

148. Applications of Signal Analysis and Processing
(4) LEE
Prerequisites: ECE 130A-B with a minimum grade of C-
in both. Lecture, 3 hours; discussion, 2 hours.
A sequence of engineering applications of signal analysis and processing techniques; in communications, image processing, analog and digital filter design, signal detection and parameter estimation, holography and tomography, Fourier optics, and microwave and acoustic sensing.

149. Active and Passive Network Synthesis
(4) ILTIS
Prerequisite: Upper-division standing; open to EE majors only.
Designed for juniors to take right after ECE 130AB. Combines the areas of electronics and network theory in the subject of passive and active network design. Topics include passive synthesis, optimization techniques, approximations to ideal filters, distributed networks, sensitivity and the modern design techniques, and applications of active filters.

151. Distributed Systems
(4) MILLAR-SMITH
Prerequisite: Computer Science 170 with a minimum grade of C-
Not open for credit to students who have completed Computer Science 171. Lecture, 3 hours; discussion, 1 hour.
Distributed systems architecture, distributed programming techniques, message passing, remote procedure calls, group communication and membership, naming, asynchrony, causality, consistency, fault-tolerance and recovery, resource management, scheduling, monitoring, testing and debugging.

152A. Digital Design Principles
(5) ROODPLU
Prerequisites: ECE 15 or 15A or Computer Science 30 with a minimum grade of C- in each course, open to electrical engineering, computer engineering, and computer science majors only. Lecture, 3 hours; laboratory, 6 hours.
Design of synchronous digital systems: timing diagrams, propagation delay, latches and flip-flops, shift registers and counters, Mealy/Moore finite state machines, Verilog, 2-phase clocking, timing analysis, CMOS implementation, S-RAM, RAM-based designs, ASM charts, state minimization.

152B. Digital Design Methodologies
(5) CHENG
Prerequisites: ECE 152A with a minimum grade of C-
open to EE, computer engineering, and computer science majors only. Lecture, 3 hours; discussion, 6 hours.
Design methodologies of digital systems, the register and processor levels. Design of functional subsystems, including arithmetic processors, hardwired and microprogrammed control units, memory systems, and bussing systems. System organization including communication, input/output systems, and multiple CPU systems.

153A. Hardware/Software Interface
(4) STAFF
Prerequisite: Computer Science 130A with a minimum grade of C-
Same course as Computer Science 153A.
The study of the structures employed at the interface of hardware and software in modern computing systems. Instruction set architecture (ISA) design trade-offs, operating system and hardware support for input/output devices (memory-mapping, interrupts, device drivers). Operating system and real-time system scheduling of tasks. Low level software and program support infrastructures (virtualization, compilation, optimization, emulation/simulation, debugging).

153B. Sensor and Peripheral Interface Design
(4) MILLIA
Prerequisites: ECE 152B and 153A with a minimum grade of C-
in both. Lecture, 3 hours; laboratory, 3 hours.
Hardware description languages; field-programmable logic and ASIC design techniques. Mixed-signal techniques: A/D and D/A converter interfaces; video and audio signal acquisition, processing and generation, communication and network interfaces.

154. Introduction to Computer Architecture
(4) PARRISH
Prerequisite: ECE 152A with a minimum grade of C-
open to EE, computer engineering, and computer science majors only.
Not open for credit to students who have completed Computer Science 154. Lecture, 3 hours; discussion, 1 hour.

155A. Introduction to Computer Networks
(4) MOSER
Prerequisite: ECE 154 with a minimum grade of C-
and, Computer Science 12 or 60 with a minimum grade of C-
Not open for credit to students who have completed Computer Science 176 or 176A, or ECE 155. Lecture, 3 hours; discussion, 1 hour.
Topics in this course include network architectures, protocols, wired and wireless networks, transmission media, multiplexing, switching, framing, error detection and correction, flow control, routing, congestion control, TCP/IP, DNS, email, World Wide Web, network security, socket programming in C/C++.

155B. Network Computing
(4) MOSER
Prerequisite: ECE 155A with a minimum grade of C-
and, Computer Science 51A or 10 or 11A with a minimum grade of C-
Not open for credit to students who have completed Computer Science 176B or ECE 194W. Lecture, 3 hours; discussion, 1 hour.
Topics in this course include client/server computing, threads, Java applets, Java sockets, Java RMI, Java servlets, Java Server Pages, Java Database Connectivity. Enterprise Java Beans, Hypertext Markup Language, extensible Markup Language, Web Services, programming networked applications in Java.

156A. Digital Design with VHDL and Synthesis
(4) WANG
Prerequisite: ECE 152A with a minimum grade of C-
Lecture, 3 hours; laboratory, 3 hours.
Introduction to VHDL basic elements. VHDL simulation concepts. VHDL concurrent statements with examples and applications. VHDL subprograms, packages, libraries and design units. Writing VHDL for synthesis. Writing VHDL for finite state machines. Design case study.

156B. Computer-Aided Design of VLSI Circuits
(4) WANG
Prerequisite: ECE 156A with a minimum grade of C-
Lecture, 3 hours; laboratory, 3 hours.
Introduction to computer-aided simulation and synthesis tools for VLSI. VLSI system design flow, role of CAD tools, layout synthesis, circuit simulation, logic simulation, logic synthesis, behavior synthesis and test synthesis.

158. Digital Signal Processing
(4) GIBSON
Prerequisites: ECE 130A-B with a minimum grade of C-
in both. Lecture, 3 hours; laboratory, 3 hours.
Digital signals and systems. Convolution, z-transforms, discrete Fourier transforms, digital filters.

160. Multimedia Systems
(4) MILLAR-SMITH
Prerequisites: upper-division standing; open to EE, computer engineering, computer science, and creative studies majors only. Lecture, 3 hours; laboratory, 3 hours.
Introduction to multimedia and applications, including WWW, image/video databases and video streaming. Covers media content analysis, media data organization and indexing (image/video databases), and media data distribution and interaction (video-on-demand and interactive TV).

162A. The Quantum Description of Electronic Materials
(4) BOWERS
Prerequisites: ECE 130A-B and 134 with a minimum grade of C-
in all; open to EE and materials majors only.

162B. Fundamentals of the Solid State
(4) COLOREN
Prerequisites: ECE 162A with a minimum grade of C-
open to EE and materials majors only.
Same course as Materials 162B. Lecture, 3 hours; discussion, 1 hour.

162C. Optoelectronic Materials and Devices
(4) COLOREN
Prerequisites: ECE 162A-B with a minimum grade of C-
open to electrical engineering and materials majors only. Lecture, 3 hours; discussion, 1 hour.

178. Introduction to Digital Image and Video Processing
(4) MILLAR-SMITH
Prerequisites: open to EE, computer engineering, and computer science majors with upper-division standing. Lecture, 3 hours; discussion, 1 hour.
Basic concepts in image and video processing. Topics include image formation and sampling, image transforms, image enhancement, and image and video compression including JPEG and MPEG coding standards.

181A. Introduction to Robotics: Robot Mechanics
(4) PADELLA
Prerequisite: open to EE, computer engineering, and computer science majors with upper-division standing. Lecture, 3 hours; discussion, 1 hour.
Recommended preparation: ME 16. Lecture, 3 hours; laboratory, 3 hours.

181B. Introduction to Computer Vision
(4) MUNUATH
Prerequisite: Upper-division standing.
Same course as Computer Science 181B. Lecture, 3 hours; laboratory, 3 hours.
Overview of computer vision problems and techniques for analyzing the content of images and video. Topics include image formation, edge detection, image segmentation, pattern recognition, texture analysis, optical flow, stereo vision, shape representation and recovery techniques, issues in object recognition, and case studies of practical vision systems.

181C. Introduction to Robotics: Robot Control
(4) PADELLA
Prerequisite: ECE 2A-B-C with a minimum grade
183. Nonlinear Phenomena  
Prerequisite: Physics 10SA or ME 163 or upper-division standing in EE. Not open for credit to students who have completed ECE 163C. Lecture, 3 hours; discussion, 1 hour. An introduction to nonlinear phenomena. Flows and bifurcations in one and two dimensions, chaos, fractals, strange attractors. Applications to physics, engineering, chemistry, and biology.

188A. Senior Electrical Engineering Project  
Prerequisites: completion of at least 4 upper-division EE courses with a GPA of 3.0 or higher; open to EE and computer engineering, majors only; consent of instructor.

188B. Senior Electrical Engineering Project  
Prerequisites: ECE 188A with a minimum grade of C-; electrical engineering and computer engineering majors only.

189A-B. Senior Computer Systems Project  
Prerequisites: consent of instructor; senior standing in computer engineering, computer science, or EE. Not open for credit to students who have completed Computer Science 189.

192. Projects in Electrical and Computer Engineering  
Prerequisites: consent of instructor. Discussion, 2 hours; laboratory, 6 hours.

193. Internship in Industry  
Prerequisite: consent of department. Must have a 3.0 grade-point-average. May not be used as departmental electives. May be repeated to a maximum of 12 units. Field, 1-8 hours.

194AA-ZZ. Special Topics in Electrical and Computer Engineering  
Prerequisites: consent of instructor. Variable hours. Group studies intended for small number of advanced students who share an interest in a topic not included in the regular departmental curriculum. Topics covered include (check with department for quarters offered): A. Circuits

AA. Micro-Electro-Mechanical Systems  
B. Systems Theory  
BB. Computer Engineering  
C. Communication Systems  
D. Control Systems  
E. Signal Processing  
F. Solid State Physics  
G. Fields and Waves  
H. Quantum Electronics  
I. Microwave Electronics  
J. Switching Theory  
K. Digital Systems Design  
L. Computer Architecture  
M. Computer Graphics  
N. Pattern Recognition  
O. Microprocessors and Microprocessor-based Systems  
P. Simulation  
Q. Imaging Systems and Image Processing  
R. General  
S. Speech  
T. Robot Control  
U. Optoelectronics  
V. Scientific Computation  
W. Computer Network  
X. Distributed Computation  
Y. Numerical Differential Equations  
Z. Nanotechnology

196. Undergraduate Research  
Prerequisite: upper-division standing; consent of instructor.

Research opportunities for undergraduate students. Students will be expected to give regular oral presentations, actively participate in a weekly seminar, and prepare at least one written report on their research.

197. Independent Studies in Electrical and Computer Engineering  
Prerequisite: consent of instructor.

Directed individual study, normally experimental.

198. Graduate Research Project in Electrical and Computer Engineering  
Prerequisite: consent of instructor.

Students are limited to five units per quarter and 30 units total in all 98/99/198/199/199DC/199RA courses combined. Directed individual study, normally experimental.

GRADUATE COURSES

201A. Electromagnetic Theory I  
Prerequisite: ECE 144. Lecture, 4 hours. Basic concepts in electromagnetic theory, energy power, plane waves, guided waves, dielectric metallic waveguides, radiation, uniqueness, image theory, reciprocity, duality, equivalence principle, induction theorem.

205A. Information Theory  
Prerequisites: ECE 140 or equivalent, or PSTA 120A-B. Same course as Computer Science 225. Lecture, 4 hours. Entropy, mutual information, and Shannon's coding theorems; lossless source coding, Huffman, Shannon-Fano-Elias, and arithmetic codes; channel capacity; rate-distortion theory, and lossy source coding, source-channel coding, algorithmic complexity and information; applications of information theory in various fields.

207. Research Projects or Independent Studies  
Prerequisite: consent of instructor. Variable hours. Graduate research projects or independent studies to be arranged between students and staff members. See M.S. degree requirements, plans 1 and 2, regarding number of units which may be used for M.S. degree.

210A. Matrix Analysis and Computation  
Prerequisite: ECE 162A or 162B.

210B. Numerical Simulation  
Prerequisite: consent of instructor.

Graduate level-matrix theory with introduction to matrix computations. SVD’s, pseudoinverses, variational characterization of eigenvalues; perturbation theory, direct and iterative methods for matrix computations.

210C. Numerical Solution of Partial Differential Equations—Finite Difference Methods  
Prerequisite: consent of instructor.

210D. Numerical Solution of Partial Differential Equations—Finite Element Methods  
Prerequisite: consent of instructor.

Same course as Computer Science 211D, Mathematics 206D, ME 210D, Chemical Engineering 211D and Geology 251D. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language. Lecture, 4 hours.

211A. Engineering Quantum Mechanics I  
Prerequisite: consent of instructor.

Same course as Chemical Engineering 211D, Mathematics 206D, ME 210D, Chemical Engineering 211D and Geology 251D. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language. Lecture, 4 hours.

211B. Engineering Quantum Mechanics II  
Prerequisite: consent of instructor.

Same course as Materials 211A, Engineering Quantum Mechanics 211A.

213A. Electromagnetic Theory II  
Prerequisite: consent of instructor.

Same course as Computer Science 230, Mathematics 206A, ME 210A, Chemical Engineering 211A, and Geology 251A. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language. Lecture, 4 hours.

214. Advanced Engineering Electromagnetics  
Prerequisite: consent of instructor.

Advanced topics in electromagnetic theory, energy power, plane waves, guided waves, dielectric metallic waveguides, radiation, uniqueness, image theory, reciprocity, duality, equivalence principle, induction theorem.

215. Solid State Physics  
Prerequisites: consent of instructor.

Advanced topics in solid state physics, including: solid state structure, band theory, electronic properties of solids, magnetic properties of solids, superconductivity, semiconductors, and lasers.

216. Quantum Mechanics  
Prerequisites: consent of instructor.

Advanced topics in quantum mechanics, including: wave mechanics, perturbation theory, density matrices, and applications to solid state physics and quantum electronics.
Same course as Materials 206A. Lecture, 4 hours.

215B. Fundamentals of Electronic Solids II
(4) BROWN
Prerequisite: ECE 162A or 162B.
Same course as Materials 206B. Lecture, 4 hours.
Phonons, electron scattering, electronic transport, selected optical properties, heterostructures, effective mass, quantum wells, two-dimensional electron gas, quantum wires, deep levels, crystal binding.

216B. Defects in Semiconductors
(4) PETROFF
Prerequisite: ECE 162A-B.
Same course as Materials 216. Lecture, 3 hours.

217. Molecular Beam Epitaxy and Band Gap Engineering
(3) GOSSARD
Prerequisite: ECE 162A-B and 213.
Same course as Materials 217. Lecture, 3 hours.
Fundamentals and recent research developments in the growth and properties of thin crystalline films of electronic and optical materials by the process of molecular beam epitaxy. Artificially structured materials with quantized electron confinement and artificially engineered electronic band structure properties.

218A. Communication Electronics
(4) LONG
Prerequisite: ECE 137A-B or equivalent.
Analog communication circuits 1 MHz to 1 GHz with emphasis on receivers. S-parameter design techniques, nonlinear components, distortion, amplifier design and characterization, system level analysis.

218B. Communication Electronics
(4) RODWELL
Prerequisite: ECE 218A.
Analog communication circuits 1 MHz to 1 GHz with emphasis on receivers. Design and evaluation of RF components: mixers, oscillators, PLL, IF amplifier, FM demodulator, frequency synthesis.

218C. High Speed Bipolar Mixed Signal and Communication IC Design
(4) RODWELL
Prerequisite: ECE 137A-B or equivalent, graduate standing.

219. CMOS & RF INTEGRATED CIRCUIT DESIGN
(4) YUE
Prerequisite: ECE 137A and 137B.
Recommended Preparation: ECE 145A/218A and ECE 145B/218B.
Covers the design and analysis of radio-frequency integrated systems at the transistor level using state-of-the-art CMOS technology. Focuses on system-level trade-offs in transistor design, practical RF circuit techniques, and physical understanding for device parasitics.

220A. Semiconductor Device Processing
(4) STAFF
Prerequisite: ECE 132 or equivalent.
Same course as Materials 215A. Lecture, 3 hours; discussion, 1 hour.
Intensive theoretical and laboratory instruction in solid-state device integrated circuit fabrication. Topics include 1) semiconductor material properties and characterization; 2) phase diagrams; 3) diffusion; 4) thermal oxidation; 5) vacuum processes; 6) thin-film deposition; 7) scanning electron microscopy. Both germanium arsenide and silicon technologies are presented.

220B-C. Semiconductor Device Processing
(4-4) HU
Prerequisite: ECE 220A.
Same course as Materials 215B-C, Lecture, 3 hours; discussion 1 hour.
Continued theoretical and laboratory instruction in the fundamentals, the design, the fabrication, and the characterization of junction and field-effect devices. Topics will include bipolar characterization, design, fabrication, and testing. The laboratory effort initiated in ECE 220A will be continued in these two quarters.

221A. Semiconductor Device Physics I
(4) MISHRA
Prerequisite: ECE 132 and 216A-B. Lecture, 4 hours.
Band diagrams of P-N junctions and heterojunctions; current flow by drift and diffusion; bipolar transistors, recombination and generation. Shockley barriers; heterostructures.

221B. Semiconductor Device Physics II
(4) MISHRA
Prerequisite: ECE 215A and 221A. Lecture, 4 hours.
Modulation of Gunn and the electronic properties of ECE 221A: field effect transistors, quantum wells and superlattices; tunneling, avalanche breakdown; physical limitations of bipolar and field effect transistors; two-dimensional current flow problems.

224A. VLSI Project Design
(4) BREWER
Prerequisite: ECE 124A or equivalent and ECE 124D/256D.
Design, planning and layout of a CMOS/Mixed-Signal VLSI Integrated Circuit for fabrication, characterization and test. Layout rules, topological, and physical issues in the design of integrated systems. Student teams plan, design and test a VLSI project.

224B. VLSI Project Testing
(4) BUTNER
Prerequisite: ECE 224A. Lecture, 2 hours; laboratory, 2 hours.
Test equipment and testing techniques. Methods for diagnosing design problems. Students perform laboratory testing of their fabricated designs from ECE 224A.

225. High Speed Digital Integrated Circuit Design
(4) BANERJEE
Prerequisite: ECE 124A or 137A. Lecture, 4 hours.
Advanced digital VLSI design. CMOS scaling, nanoscale issues, design methodology, thermal management, interconnects, reliability, non-clocked, clocked and self-timed logic gates; clocked storage elements; high-speed components, PLLs and DLLs; clock and power distribution, memory systems, signaling and I/O design; low-power design.

226. Level Set Methods
(4) BOWERS
Prerequisite: Computer Science 211C or Chemical Engineering 211C or ECE 210C or ME 210C.
Same course as Chemical Engineering 226, Computer Science 216, and ME 216.
Mathematical description of the level set method and design of the numerical methods used in its implementations (ENO-WENO, Godunov, Lax-Friedrich, etc.). Introduction to the Ghost Fluid Method. Applications in CFD. Materials Sciences, Computer Vision and Computer Graphics.

227A. Semiconductor Lasers I
(4) COLDREN
Prerequisite: ECE 162A-B or 144. Lecture, 4 hours.
Review of semiconductor physics, growth technology, and materials properties; double-heterostructure and quantum-well laser structures; carrier and photon rate equations; light vs. current characteristics; scattering and transmission matrixes; compound cavity, distributed Bragg reflector, and distributed feedback lasers.

227B. Semiconductor Lasers II
(4) COLDREN
Prerequisite: ECE 227A and 215A. Lecture, 4 hours.
Gain and spontaneous emission vs. injection current in semiconductors; nonradiative recombination; strain induced effects; dynamic characteristics of lasers including differential and large signal analysis of the rate equations; relative intensity noise and linewidth; carrier transport and feedback effects.

227C. Photonic Integrated Circuits
(4) COLOREN
Prerequisite: ECE 227A-B. Lecture, 4 hours.
Perturbation and coupled-mode analysis, DBR lasers revisited, directional couplers; modal excitation. Dielectric waveguide analysis techniques; waveguide radiation losses. Photonic integrated circuit examples, including tunable lasers with in-line gratings and contra- and co-directional couplers; ring lasers; numerical analysis techniques.

228A. Fiber Optic Communications
(4) BOWERS
Prerequisite: ECE 216A-B-C, 135, 144. Lecture, 4 hours.
Optical fiber structures and guided modes. Effect of dispersion, attenuation and fiber, nonlinearities. Basic transmission design including loss and rise time budgets. Optical transmission system essentials and requirements. Introduction to WDM and TDM components and technologies.

228B. Fiber Optic Components and Systems
(4) BOWERS
Prerequisite: ECE 228A. Lecture, 4 hours.
Photodetector design and receiver characteristics. Optical transmitters, optical amplifiers, optical isolators, optical switches, wavelength converters, regenerators, optical multiplexers, and demultiplexers. Advanced transmission link design and performance including bit error rate and signal to noise ratio and fiber transmission impairments.

228C. Optical Networks
(4) BOWERS
Prerequisite: ECE 228B. Lecture, 4 hours.
Introduction to optical network architectures including long-haul, wide-area, metro and access networks. First generation networks including SONET and Gigabit Ethernet. Second generation networks including optical circuit switched network concepts, control plane, protection switching, routing wavelength assignment, and network management and control.

229. Hybrid Systems
(4) HESPANHA
Prerequisite: graduate standing in mechanical engineering, chemical engineering, electrical and computer engineering, or computer science. Recommended preparation: ECE 147A or similar course.
Introduction to systems that combine continuous dynamics with discrete logic. Topics include a modeling framework that combines elements from automata and differential equations, simulation tools, analysis and design techniques for hybrid systems and applications of hybrid control systems.

230A-B. Linear Systems I, II
(4-4) HESPANHA, BANERJEE
Prerequisite: ME 210A (for 230A); ECE 140; and, ECE 230A or ME 243A, and ME 210A (for 230B).

232. Introductory Robust Control with Applications
(4) SMITH, KHAMMASH
Prerequisite: ECE 230A or ME 255A, and ECE 230B or ME 243B (may be taken concurrently).
Same course as ME 256. Robust Control theory; uncertainty modeling; stability of systems in the presence of norm-bounded perturbations; induced norm performance problems;
structured singular value analysis; H-infinity control theory; model reduction; computer simulation based design projects and practical problems.

234. Modeling, Identification, and Validation for Control

Prerequisite: ECE 230A. Lecture, 2 hours.

Parameter and non-parametric models, open and closed-loop identification, bias and variance effects, model order selection, probing signal design, subspace identification, closed-loop probing, autotuning, model validation, interactive identification and design.

235. Stochastic Processes in Engineering

(4) LITIS

Prerequisites: ECE 140; graduate standing. Lecture, 4 hours.

A first-year graduate course in stochastic processes, including: review of basic probability, Gaussian, Poisson, and Wiener processes; wide-sense stationary processes; covariance function and power spectral density, linear systems driven by random inputs; basic Wiener and Kalman filter theory.

236. Nonlinear Control Systems

(4) TEEL

Same course as ME 236. Lecture, 4 hours.

Analysis and design of nonlinear control systems. Focus on Lyapunov stability theory, with sufficient time devoted to contrasts between linear and nonlinear systems, input-output stability and the describing function method.

237. Nonlinear Control Design

(4) TEEL

Prerequisite: ECE 236 or ME 236. Lecture, 4 hours.

238. Advanced Control Design Laboratory

(4) SMITH

Prerequisites: ECE 230A, and, ECE 232A or ECE 237 or ME 237 or ECE 249 or ME 270A or Chemical Engineering 252. Lecture, 2 hours; laboratory, 6 hours.

A laboratory course requiring students to design and implement advanced control systems on a physical experiment. Experiments from any engineering or scientific discipline are chosen by the student.

240A. Optimal Estimation and Filtering

(4) SHYNYK

Prerequisites: ECE 140 and 210A. Lecture, 4 hours.

241. Multimedia Compression

(4) GIBSON

Prerequisites: ECE 140 or 225, and ECE 158.

Not open for credit to students who have completed MAT 221. Lecture, 4 hours.

Covers the principle standards of speech, audio, still image and video compression with emphasis on system performance, key underlying algorithms and technologies, current applications and the projected future evolution of the standards.

242. Digital Signal Compression

(4) ROSE

Prerequisites: ECE 140 or 235; and ECE 146B. Lecture, 3 hours.

Principles and techniques of signal compression systems. Basic quantization theory, linear prediction, predictive coding, transform and subband coding, entropy coding, and vector quantization. Techniques and algorithms for efficient trade-offs between fidelity, bit-rate, and complexity. Applications to speech, audio, image and video compression.

243A. Digital Communication Theory

(4) SHYNYK

Prerequisite: ECE 146B. Lecture, 4 hours.

Review of probability and random waveforms, optimum receiver principles, efficient signaling, bounds on error probability, convolutional coding, channel capacity, emphasis on geometric approach to signal description.

243B. Advanced Digital Communication Theory

(4) SHYNYK

Prerequisite: ECE 243A. Lecture, 4 hours.

Bandlimited channels and optimum receiver for ISI channels; linear, decision-feedback, blind, and adaptive equalization; multichannel and multicarrier systems; spread-spectrum and frequency hopping; fading multipath channels and diversity techniques; multiuser communications.

245. Adaptive Filter Theory

(4) SHYNYK

Prerequisites: ECE 140, 158, and 210A (may be taken concurrently). Lecture, 4 hours.

247. System Identification

(4) STAFF

Prerequisite: ECE 230A. Lecture, 4 hours.

248. Kalman and Adaptive Filtering

(4) STAFF

Prerequisites: ECE 210A, 230A and 235 (may be taken concurrently). Lecture, 4 hours.

249. Adaptive Control Systems

(4) KOKOTOVIC

Prerequisites: ECE 236 and 247. Lecture, 4 hours.

250. Wireless Communication and Networking

(4) ROODPLU

Prerequisites: ECE 155A and 146A. Lecture, 4 hours.

Overview of wireless medium, physical layer operation (spread spectrum, UWB, OFDM, adaptive modulation, MIMO channel), cellular planning, mobility management, energy-efficient networking, GSM, CDMA, wireless LANs, ad hoc networks, wireless geolocation systems.

252. Computer Arithmetic

(4) PARHIAM

Prerequisites: ECE 152A-B. Lecture, 4 hours.

253. Embedded System Design

(4) BREWER

Lecture, 4 hours.

Design and application of embedded computing systems, particular attention paid to computation system design in highly constrained environments. System synthesis and modeling techniques including partitioning, scheduling, control and data flow analysis and functional representation. Embedded project design.

254A. Advanced Computer Architecture: Supercomputers

(4) MELLARI-SMITH

Prerequisite: ECE 154. Lecture, 4 hours.

254B. Advanced Computer Architecture: Parallel Processing

(4) PARHIAM

Prerequisite: ECE 254A. Lecture, 4 hours.

254C. Advanced Computer Architecture: Distributed Systems

(4) MELLARI-SMITH

Prerequisite: ECE 254A.

255A. VLSI Testing Techniques

(4) CHENG

Prerequisites: ECE 152A, knowledge of C language, data structures and algorithms. Lecture, 4 hours.

Concepts, algorithms and design techniques for VLSI testing. Fault modeling, fault simulation, automatic test generation, design for testability, built-in self test, testability analysis, delay testing and synthesis for testability.

255B. VLSI Design Validation

(4) WANG

Prerequisites: ECE 255A, knowledge of C language, data structures and algorithms; consent of instructor. Lecture, 4 hours.

Theories and concepts in verification. Verification tools and methodologies. Functional verification, equivalence checking, symbolic simulation, error modeling, verification coverage, silicon debug, on-chip validation, test and verification.

256A. Introduction to Design Automation

(4) MAREK-SADOWSKA

Prerequisites: ECE 124A or ECE 224A; knowledge of C language, Algorithms and Data Structures, equivalent to Computer Science 130A-B. Lecture, 3 hours; laboratory, 2 hours.

Overview of physical level design automation. Partitioning, placement, routing and structured design of VLSI and PC-board structures. Techniques will include graph theoretic algorithms, integer linear programming, force-directed and simulated annealing heuristics.

256B. Logic Design Automation

(4) BREWER

Prerequisites: ECE 256A. Lecture, 3 hours; laboratory, 2 hours.

CAD algorithms for VLSI logic and module level design. Special attention paid to timing, area, and power trade-offs. Cell design systems and associated lab with state of the art VLSI design tools. (W).

256C. Advanced VLSI Architecture and Design

(4) STAFF

Prerequisite: ECE 124A or equivalent or ECE 256A or 256B
Large scale VLSI design with attention to performance constraints in real-world designs. Topics include circuit modeling, communication parasitics, architecture optimization, and packaging. Large scale project will be fabricated using silicon compilation.

256D. Algorithmic Logic Synthesis (4) MAREK GADOMSKA
Prerequisite: ECE 258A. Lecture, 4 hours.
Companion course for ECE 256B. Algorithmic extension of logic synthesis and techniques. Topics covered include: two and multilevel minimization, technology mapping, logic partitioning, and testable logic.

257A. Fault Tolerant Computing (4) PARIAMI
Prerequisites: ECE 152A-B. Lecture, 3 hours.

258A. Advanced Digital Signal Processing (4) STAFF
Prerequisite: ECE 158. Lecture, 4 hours.
Digital filter design, discrete random signals, effects of finite word length arithmetic, fast Fourier transform and applications, power spectrum estimation.

258B. Multirate Digital Signal Processing (4) STAFF
Prerequisites: ECE 158 and ECE 258A. Lecture, 4 hours.
Multirate digital filter theory, polyphase decomposition, decimator and interpolator design, efficient implementations, orthogonal transforms, wavelet transform, analysis and synthesis filter banks, quadrature mirror filter banks, transmultiplexer, subband decomposition, applications.

258C. VLSI Digital Signal Processing Systems (4) STAFF
Prerequisites: ECE 158 and ECE 258A. Lecture, 4 hours.
Characteristics and representations of signal processing programs, iteration bound, pipelining and parallel processing, retiming and unfolding transformations, fast convolution algorithms, algorithmic strength reductions in filters and transforms. (offered every even-numbered year)

259A. Digital Speech Processing (4) RABINER
Prerequisite: ECE 158 and ECE 242. Lecture, 4 hours.

259B. Fundamentals of Speech Recognition (4) RABINER
Prerequisite: ECE 158 and ECE 242. Lecture, 4 hours.
Course covers the fundamental design principles of automatic speech recognition systems, including speech detection, time alignment and normalization (including dynamic time warping methods), distortion measures, the Hidden Markov Model (HMM), grammar networks, and the use of Finite State Network representations. (Offered alternate years.)

260A. Principles of Quantum Electronics (4) YEH
Prerequisite: ECE 144A or 162C. Lecture, 4 hours.
Emphasis on lasers, masers, and molecules. Interaction between radiation and quantized systems. Stimulated emission devices. Optical resonators. Lasers. (Offered alternate years)

267. Confined Electrons and Photons in Semiconductor Structures (3) PETROFF
Prerequisite: Materials 162A-B or ECE 162A-B. Same course as Materials 267. Lecture, 3 hours.
The properties of 1D, 2D and 3D confined electrons in semiconductor are reviewed. Properties of photons in microwave and photonic crystals are introduced. Applications of photonic crystals to light extraction and modifications of the emitter properties are developed.

270. Noncooperative Game Theory (4) HESPANHA
Prerequisite: ECE 210A. Lecture, 4 hours.
Formulation of problems as mathematical games and provides the basic tools to solve them. Covers both static and dynamic games. Intended for graduate students (but is not restricted to) in communications, controls, signal processing, and computer science.

271A. Principles of Optimization (4) CHANDRABEKKAR
Prerequisite: ECE 210A (may be taken concurrently). Lecture, 4 hours.

271B. Numerical Optimization Methods (4) STAFF
Prerequisite: ECE 210A. Lecture, 4 hours.

271C. Optimal Control of Dynamic Systems (4) RABINER

277B. Pattern Recognition (4) ROSE
Prerequisites: ECE 130C and 140. Lecture, 4 hours.
Principles and design of pattern recognition systems. Statistical, linear, and neural network models; maximum likelihood and Viterbi decoding.)

278A. Digital Image Processing (4) MANJUNATH
Prerequisite: ECE 158 or ECE 178. Lecture, 3 hours; laboratory, 3 hours.
Two-dimensional signals and systems. Two-dimensional Fourier and z-transforms. Discrete Fourier transform, fast Fourier transform. Image processing basics, image enhancement and restoration. Special image processing software available for laboratory experimentation.

278B. Imaging Systems (4) STAFF
Prerequisites: ECE 158 and 178. Lecture, 4 hours.
Generalized holography, backward techniques, resolution limit, X-ray tomography, diffraction tomography, NMR imaging, synthetic-aperture radar, active sonar imaging, acoustic microscopy, imaging algorithms, motion estimation and tracking.

279. Computer System Performance Evaluation (4) STAFF
Prerequisite: ECE 140, ECE 154, and Computer Science 170.

281B. Advanced Topics in Computer Vision (4) MANJUNATH
Prerequisite: ECE 181B. Lecture, 3 hours.
Same course as Computer Science 281B. Advanced topics in computer vision: image sequence analysis, spatiotemporal filtering, camera calibration and hand-eye coordination, robot navigation, shape representation, physically-based modeling, multi-sensory fusion, biological models, expert vision systems, and other topics selected from recent research papers.

282. Error Correcting Codes (4) ROSE
Prerequisite: ECE 130C or 140. Lecture, 3 hours.
Principles and techniques for combating channel errors in data transmission or storage. Introduction to Galois fields. Linear block codes (particularly Hamming, BCH, Reed-Solomon). Convolution codes. Encoding and decoding algorithms (including spectral methods, maximum likelihood and Viterbi decoding.)

290. Ethics in Academic and Industrial Research (2) SMITH
Prerequisite: consent of instructor. Lecture, 2 hours.
Case study/analysis format addressing ethical issues in research conduct: mentoring, authorship, scholarship, copyright, misconduct, fraud, falsification, mentor/protege relationships, confidentiality, patents, consulting, conflicts of interest, funding and control of research, reviewing and editing, sexual relationships in the workplace.

293. Internship in Industry (1-6) STAFF
Prerequisite: consent of department.
May be repeated to a maximum of 6 units. Variable hours.
Special projects for selected students. Offered in conjunction with engineering practice in selected industrial and research firms, under direct faculty supervision.

295. Group Studies: Controls, Dynamical Systems, and Computation (1-12) STAFF
Same course as Chemical Engineering 295, Computer Science 592, and ME 295. Seminar, 1 hour.
A series of weekly lectures given by university staff and outside experts in the fields of control systems, dynamical systems, and computation.

493. Internship in Industry (1-12) STAFF
Prerequisite: Graduate student standing, open to EE and computer engineering majors only.
Special projects for vocal EE and computer engineering majors. Offered in conjunction with engineering practice in selected industrial and research firms, under direct faculty supervision.

502. Teaching of Electrical and Computer Engineering (1-3) STAFF
Open to electrical and computer engineering teaching assistants only. No unit credit allowed toward advanced degree. Variable hours.
Prerequisites: consent of instructor and graduate status. May be repeated for credit if there is no duplication of course content. Seminar, 1-5 hours. Instruction in these courses may be carried out by lecture, or by laboratory, or by a combination of these. These courses provide a study of topics of current interest in various areas of electrical and computer engineering. Special topics are coded as follows (check with department for quarters offered):
Chair & Associate Dean for Undergraduate Studies: Glenn E. Beltz  
Associate Dean for Technology Management Programs: Gary S. Hansen

Faculty
* Kevin C. Almeroth, Ph.D., Georgia Institute of Technology, Professor  
* Glenn E. Beltz, Ph.D., Harvard, Professor  
* John E. Bowers, Ph.D., Stanford University, Professor  
* Steven P. DenBaars, Ph.D., University of Southern California, Professor  
* Edward N. Dodson, Ph.D., Stanford University, Lecturer  
* Gary S. Hansen, Ph.D., University of Michigan, Associate Professor  
* Keith T. Kedward, Ph.D., University of Wales, Professor  
* David Seibold, Ph.D., Michigan State University, Professor  
* Technology Management Program faculty

The Engineering Sciences program at UCSB serves as a focal point for the cross-disciplinary educational environment that prevails in each of our five degree-granting undergraduate programs (chemical engineering, computer engineering, computer science, electrical engineering, and mechanical engineering). The courses offered in this “department” are designed to cultivate well-educated, innovative engineers and scientists with excellent management and entrepreneurial skills and attitudes oriented to new technologies.

One of the missions of the Engineering Sciences program is to provide coursework commonly needed across other educational programs in the College of Engineering. For example, courses in computer programming, computation, ethics, engineering writing, engineering economics, computer science communication to the public, and even an aeronautics-inspired art course are offered.

Engineering Sciences Courses

LOWER DIVISION

3. Introduction to Matlab and C Programming
   (3) STAFF  
   Prerequisites: Open to chemical engineering, electrical engineering, and mechanical engineering majors only.
   General philosophy of programming for engineering majors, with introductions to Matlab, the C programming language, and the Linux operating system.

10H. Engineering Honors Seminar
   (1) BELTZ, TIRRELL, MISHRA, HANSEN  
   Prerequisites: enrollment in College of Engineering Honors Program; lower-division standing.
   An interdisciplinary examination of selected topics, texts, theories, and/or methods in engineering. Particular course focus is determined by the instructor(s) each time the course is offered.

99. Introduction to Research
   (1-3) STAFF  
   Prerequisite: Consent of instructor.
   May be repeated for credit to a maximum of 6 units. Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined. Directed study to be arranged with individual faculty members. Course offers exceptional students an opportunity to participate in a research group.

UPPER DIVISION

100. Engineering Economic Analysis
   (3) DODSON  
   Prerequisite: Upper-division standing in Engineering.
   Integration of economics into the evaluation of engineering projects; economic considerations in engineering project management and decision-making.

101. Ethics in Engineering
   (3) STAFF  
   Prerequisite: senior standing in engineering.

102AA-ZZ. Special Topics in Engineering, Business, and Society
   (1-4) STAFF  
   Prerequisites: Upper-division standing.
   May be repeated for credit if there is no duplication of course content.
   A series of weekly lectures given by university staff and outside experts in all fields of new technology management.

103. Advanced Engineering Writing
   (4) STAFF  
   Prerequisites: Writing 50 or 50E; upper-division standing.
   Practice in the forms of communication—contractual reports, proposals, conference papers, oral presentations, business plans—that engineers and entrepreneurial engineers will encounter in professional careers. Focus is on research methods, developing a clear and persuasive writing style, and electronic document preparation.

160. Science for the Public
   (1-4) STAFF  
   Prerequisite: consent of instructor.
   Same course as Physics 160K. Open to graduate students in science and engineering disciplines and to undergraduate science and engineering majors. May be repeated for credit to a maximum of 12 units, but only 4 units may be applied to the major.
   Provides experience in communicating science and technology to nonspecialists. The major components of the course are field work in mentoring, a biweekly seminar, presentations to precollege students and to adult nonscientists, and end-of-term research papers.

177. Art and Science of Aerospace Culture
   (4) STAFF  
   Prerequisites: upper-division standing; consent of instructor.
   Same course as Art Studio 177.
   Interdisciplinary course/practice for artists, academics, engineers, and designers interested in exploring the technological aesthetic, cultural, and political aspects of the space side of the aerospace complex. Design history, space complex aesthetics, cinema interactions, images/telecommunications, human spaceflight history, reduced/alternating gravity experimentation, space systems design/utilization.

182. Introduction to Health Care and Biomedical Technology
   (3) KOHL
   Prerequisite: upper-division standing.
   Same course as MCD 182.
   Course offered in conjunction with Sansum-Santa Barbara Clinic and Cottage Hospitals and involves a series of lecture/discussions dealing with various aspects of health delivery and modern biotechnology. Students spend time working with a physician or medical research scholar.

185A. The Art of the CEO: Business Skills for Future Leaders
   (4) HANSEN
   Prerequisites: Writing 2 or 2E, and Writing 50 or 50E or 109AA-ZZ; senior standing.

Engineering Sciences

Engineering Sciences, Office of the Associate Dean for Undergraduate Studies, Harold Frank Hall, Room 1006; Telephone (805) 893-2809  
Web site: www.engr.ucsb.edu/current_undergraduates/engr_sci/
An introductory business course in strategic thinking, negotiations, marketing, finance and modeling skills that prepare engineering, science and non-technical students for successful entry into business. Class uses case studies, lectures, and computer simulation.

185B. New Venture Creation: Entrepreneurship
(4) HANSEN
Prerequisite: Writing 2 or 2E, and, Writing 50 or 50E or 109AA-ZZ; senior standing.
Overview of the new venture creation process. Analysis of new business opportunities, development of new business value propositions, team building, venture financing, new venture planning, managing and protecting intellectual property, business formation, and other topics relevant to the entrepreneurial process.

185C. Business Planning for New Technology Ventures
(4) HANSEN
Prerequisite: Engineering 185A; and, Engineering 185B or 185D; senior standing.
Analysis and creation of a business plan for a new business venture including demand forecasting, financial modeling, selling of the new business idea, and other issues for current business conditions.

185D. New Product Development
(4) BOWERS
Prerequisite: senior standing.
New product development requires technical and non-technical business persons to work across disciplines. Instruction is provided in a wide range of topics concerning customer driven product innovation. Students learn new product development processes, tools, techniques and organizational structures.

185F. Business Skills: Asia: New Opportunities for Technology Businesses
(4) STAFF
Prerequisite: Upper-division standing.
Use analytical frameworks for assessing technology business environments and sustainability within Asia. Establish historical context; governmental structures, policy and influence; capability investments and yield by local and foreign companies; operating models in leveraging Asian economies’ resources and related experiences.

191AA-ZZ. Professional Seminar in New Technology Management
(2) STAFF
Prerequisite: Upper-division standing.
May be repeated for credit if there is no duplication of course content.
Courses provide for the study of topics of current interest in the areas of entrepreneurship, business, engineering management, ethics, social, political, and other issues related to the successful practice of engineering.

192A. Entrepreneurial Opportunities in Healthcare and Life Sciences
(2) STAFF
Prerequisite: senior standing.
Not open for credit to students who have completed Engineering 191F.
Expert guest lecturers address current products and services. Students address the identification of market opportunities with an appreciation of the needs and requirements of the healthcare industry.

192B. Designing Solutions for Healthcare and Life Sciences Opportunities
(2) STAFF
Prerequisite: senior standing.
Students identify specific solutions for business opportunities in the healthcare industry considering technological and market feasibility. Interaction with healthcare professionals and industry executives.

192C. Critical Issues in Early Stage Healthcare and Life Science Companies
(2) STAFF
Prerequisite: senior standing.
Course includes visiting speakers and field visits to facilitate learning about the critical issues in early stage, life science related companies.

193A. Entrepreneurial Opportunities in IT and Telecom
(2) STAFF
Prerequisite: Upper-division standing.
This course is intended for students with an interest in the identification of new products and services in the IT and Telecom environment. The course involves interaction with industry professionals and executives.

193B. Designing Solutions for IT and Telecom
(2) STAFF
Prerequisite: Upper-division standing.
Students design specific solutions for business opportunities in the IT and Telecom industry considering technological and market feasibility.

193C. Critical Issues in Early Stage IT and Telecom Companies
(2) STAFF
Prerequisite: Upper-division standing.
Course includes visiting speakers and field visits to facilitate learning about the critical issues in early stage, Telecom related companies.

199. Independent Studies in Engineering
(1-5) STAFF
Prerequisite: Upper-division standing; consent of instructor.
Students must have a minimum 3.0 GPA for the preceding three quarters. May be repeated for credit to a maximum of 10 units.
Directed individual study.

GRADUATE COURSES

202AA-ZZ. Special Topics in Engineering, Business and Society
(1) STAFF
Prerequisite: graduate standing.
May be repeated for credit if there is no duplication of course content.
A series of weekly lectures given by university staff and outside experts in all fields of new technology management.

285A. The Art of the CEO: Business Skills for Future Leaders
(4) HANSEN
An introductory business course in strategic thinking, negotiations, marketing, finance and modeling skills that prepare engineering, science and non-technical students for successful entry into business. Uses case studies, lectures, and computer simulation.

285B. New Venture Creation: Entrepreneurship
(4) HANSEN
Overview of the new venture creation process. Analysis of new business opportunities, development of new business value propositions, team building, venture financing, new venture planning, managing and protecting intellectual property, business formation, and other topics relevant to the entrepreneurial process.

285C. Business Planning for New Technology Ventures
(4) HANSEN
Prerequisites: Engineering 285A; and, Engineering 285B or 285D.
Analysis and creation of a business plan for a new business venture including demand forecasting, financial modeling, selling of the new business idea and other issues for current business conditions.

285D. New Product Development
(4) BOWERS
New product development requires technical and non-technical business persons to work across disciplines. Instruction is provided in a wide range of topics concerning customer driven product innovation. Students learn new product development processes, tools, techniques and organizational structures.

285E. Managing for Innovation
(4) SEIBOLD
Prerequisite: graduate standing.
Examination of communication and key management functions: envisioning and strategic planning; creating high performance teams; establishing appraisal/reward systems; innovation and organizational change. Emphasis on leading innovative technical people; leadership that fosters entrepreneurship and intrapreneurship; new forms of organizing.

285F. Business Skills: Asia: New Opportunities for Technology Businesses
(4) STAFF
Prerequisite: graduate standing.
Students use analytical frameworks for assessing technology business environments and sustainability within Asia. Establish historical context; governmental structures, policy and influence; capability investments and yield by local and foreign companies; operating models in leveraging Asian economies’ resources and related experiences.

291AA-ZZ. Professional Seminar in New Technology Management
(2) STAFF
May be repeated for credit if there is no duplication of course content.
Courses provide for the study of topics of current interest in the areas of entrepreneurship, business, engineering management, ethics, social, political, and other issue related to the successful practice of engineering.

292A. Entrepreneurial Opportunities in Health Care and Life Sciences
(2) STAFF
Expert guest lecturers address current products and services. Students address the identification of market opportunities with an appreciation of the needs and requirement of the healthcare industry.

292B. Designing Solutions for Healthcare and Life Sciences Opportunities
(3) STAFF
Students identify specific solutions for business opportunities in the healthcare industry considering technological and market feasibility. Interaction with healthcare professionals and industry executives.

292C. Critical Issues in Early Stage Healthcare and Life Science Companies
(2) STAFF
Course includes visiting speakers and field visits to facilitate learning about the critical issues in early stage, life-science related companies.

293A. Entrepreneurial Opportunities in IT and Telecom
(2) STAFF
Prerequisite: graduate standing.
Intended for students with an interest in the identification of new products and services in the IT and Telecom environment. The course involves interaction with industry professionals and executives.

293B. Designing Solutions for IT and Telecom
(2) STAFF
Prerequisite: graduate standing.
Students design specific solutions for business opportunities in the IT and Telecom industry considering technological and market feasibility.

293C. Critical Issues in Early Stage IT and Telecom Companies
(2) STAFF
Prerequisite: graduate standing.
Course includes visiting speakers and field visits to facilitate learning about the critical issues in early stage, Telecom related companies.

Faculty
Guillermo C. Bazan, Ph.D., Massachusetts
Institute of Technology, Professor (polymer synthesis, photophysics) *5
Michael Chabinyc, Ph.D., Stanford University, Professor (organic semiconductors, thin film electronics, energy conversion using photovoltaics, characterization of thin films of polymers, x-ray scattering from polymers) *2
David R. Clarke, Ph.D., University of Cambridge, Professor (electrical ceramics, thermal barrier coatings, piezospectroscopy, mechanics of microelectronics) *2
Larry A. Coldren, Ph.D., Stanford University, Kavli Professor in Optoelectronics and Sensors, Director of Optoelectronics Technology Center (semiconductor integrated optics, optoelectronics, molecular beam epitaxy, microfabrication) *1
Steven P. DenBaas, Ph.D., University of Southern California, Professor (metalorganic chemical vapor deposition (MOCVD) of semiconductors, IR to blue lasers and LEDs, high power electronic materials and devices) *1
Anthony Evans, Ph.D., Imperial College, London, Professor, Director of Center for Multifunctional Materials and Structures (thermostructural materials, ultralight structures, multifunctional materials and devices, actuating structures) *2
Arthur C. Gossard, Ph.D., UC Berkeley, Professor (epitaxial growth, artificially synthesized semiconductor microstructures, semiconductor devices) *1
Craig Hawker, Ph.D., University of Cambridge, Professor, Director of Materials Research Laboratory (synthetic polymer chemistry, nonotechnology, materials science) *5
Alan J. Heeger, Ph.D., UC Berkeley, Professor, Director of Institute for Polymers and Organic Solids, 2000 Chemistry Nobel Laureate (condensed-matter physics, conducting polymers) *4
Evelyn Hu, Ph.D., Columbia University, Professor, Director of Institute for Quantum Engineering, Science, and Technology, Scientific Co-Director of California NanoSystems Institute (high-resolution fabrication techniques for semiconductors, device structures, process-related materials damage, contact/interface studies, superconductivity) *1
Jacob N. Israelachvili, Ph.D., University of Cambridge, Professor (adhesion, friction surface forces, colloids, biosurface interactions) *3
Edward J. Kramer, Ph.D., Carnegie Mellon University, Professor (fracture and diffusion in polymers; polymer surfaces, interfaces, and thin films) *3
Herbert Kroemer, Dr. rer. nat., University of Göttingen, Donald W. Whittier Professor of Electrical Engineering, 2000 Physics Nobel Laureate (device physics, molecular beam epitaxy, heterojunctions, compound semiconductors) *1
Frederick F. Lange, Ph.D., Pennsylvania State University, ALCOA Professor of Materials (processing, ceramics, microstructure, mechanical properties)
Carlos G. Levi, Ph.D., University of Illinois at Urbana-Champaign, Professor (materials processing, and microstructure evolution, coatings, composites, functional inorganic) *2
Noel C. MacDonald, Ph.D., UC Berkeley, Kavli Professor in MEMS Technology (microelectromechanical systems, applied physics, nano-fabrication, electron optics, materials, mechanics, surface analysis) *2
Robert M. McMeeking, Ph.D., Brown University, Professor (mechanics of materials, fracture mechanics, plasticity, computational mechanics, process modeling) *2
Frederick F. Milstein, Ph.D., UC Los Angeles, Professor (crystal mechanics, bonding, defects, mechanical properties) *2
Shuji Nakamura, Ph.D., University of Tokushima, Cree Professor of Solid State Lighting and Displays (gallium nitride, blue lasers, white LEDs, solid state illumination, bulk GaN substrates)
G. Robert Odette, Ph.D., Massachusetts Institute of Technology, Professor (fundamental deformation and fracture, materials in extreme environments, structural reliability, and high-performance composites) *2
Chris Palmstrom, Ph.D., University of Leeds, Professor (atomic level control of interfacial phenomena, in-situ STM, surface and thin film analysis, metallization of semiconductors, dissimilar materials epitaxial growth, molecular beam and chemical beam epitaxial growth of metallic compounds) *1
Pierre M. Petroff, Ph.D., UC Berkeley, Professor (semiconductor interfaces, defects physics, epitaxy of self assembled quantum structures, quantum dots and nanomagnets, spectroscopy of semiconductor nanostructures) *1
Philip A. Pincus, Ph.D., UC Berkeley, Professor (theoretical aspects of self-assembled biomolecular structures, membranes, polymers, and colloids) *4
Cyrus R. Safinya, Ph.D., Massachusetts Institute of Technology, Professor (biophysics, supramolecular assemblies of biological molecules, non-viral gene delivery systems)
Omar A. Saleh, Ph.D., Princeton University, Assistant Professor (single-molecule biophysics, motor proteins, DNA-protein interactions)
Ram Seshadri, Ph.D., Indian Institute of Science, Professor (inorganic materials, preparation and magnetism of bulk solids and nanoparticles, patterned materials)
Hyonguk (Tom) Soh, Ph.D., Stanford, Associate Professor (directed evolution of biological molecules, supramolecular assemblies, integrated biosensors) *2
Nicola A. Spaldin, Ph.D., UC Berkeley, Professor (computational electronic and magnetic materials)
James S. Speck, Sc.D., Massachusetts Institute of Technology, Professor (nitrile semiconductors, III-V semiconductors, ferroelectric and high-K films, microstructural evolution, extended defects, transmission electron microscopy, x-ray diffraction)
Susanne Stegger, Ph.D., University of Stuttgart, Professor (functional oxide thin films, structure-property relationships, scanning transmission electron microscopy and spectroscopy)
Galen Stucky, Ph.D., Iowa State University, Professor (biomaterials, composites, materials synthesis, electro-optical materials catalysis) *5
Matthew V. Tirrell, Ph.D., University of Massachusetts, Aullil Professor (bioengineering, polymer science and engineering) *3
Chris Van de Walle, Ph.D., Stanford University, Professor (novel electronic materials, wide-band-gap semiconductors, oxides)
Claude Weisbuch, Ph.D., Universite Paris VII, Ecole Polytechnique-Palaiseau, Professor (semiconductor physics: fundamental and applied optical studies of quantized electronic structures and photonic-controlled structures; electron spin resonance in semiconductors, optical semiconductor microcavities, photonic bandgap materials)
Fred Wudl, Ph.D., UC Los Angeles, Professor (optical and electro-optical properties of conjugated polymers, organic chemistry of fullerenes, and design and preparation of self-mending polymers)
Francis W. Zok, Ph.D., McMaster University, Professor (mechanical and thermal properties of materials and structures)
Emeriti Faculty
Anthony K. Cheetham, Ph.D., Oxford University, Professor, Catalysis, optical materials, X-ray, neutron diffraction) *5
James L. Merz, Ph.D., Harvard University, Professor Emeritus *1
*1 Joint appointment with the Department of Electrical and Computer Engineering.
*2 Joint appointment with the Department of Mechanical Engineering.
*3 Joint appointment with the Department of Chemical Engineering.
*4 Joint appointment with the Department of Physics.
*5 Joint appointment with the Department of Chemistry and Biochemistry
Affiliated Faculty
Glenn H. Fredrickson, Ph.D. (Chemical Engineering)
James S. Langer, Ph.D. (Physics)
L. Gary Leal, Ph.D. (Chemical Engineering)
Glenn E. Lucas, Ph.D. (Chemical Engineering, Mechanical Engineering)
John McGugue, Ph.D.
Joseph A. N. Zasadzinski, Ph.D. (Chemical Engineering)

The Department of Materials was conceptualized and built under two basic guidelines: to educate graduate students in advanced materials and to introduce them to novel ways of doing research in a collaborative, multidisciplinary environment. Advancing materials technology today—either by creating new materials or improving the properties of existing ones—requires a synthesis of expertise from the classic materials fields of metallurgy, ceramics, and polymer science, and such fundamental disciplines as applied mechanics, chemistry, biology, and solid-state physics. Since no individual has the necessary breadth and depth of knowledge in all these areas, solving advanced materials problems demands the integrated efforts of scientists and engineers with different backgrounds and skills in a research team. The department has effectively transferred the research team concept, which is the operating mode of the high technology industry, into an academic environment. The department has major research groups working on a wide range of advanced inorganic
and organic materials, including advanced structural alloys, ceramics and polymers; high performance composites; thermal barrier coatings and engineered surfaces; organic, inorganic and hybrid semiconductor and photonic material systems; catalysis and porous materials; magnetic, ferroelectric and multiferroic materials; biomaterials and bio-surfaces, including biomedically relevant systems; colloids, gels and other complex fluids; lasers, LEDs and optoelectronic devices; packaging systems; micro-scale engineered systems, including MEMS. The groups are typically multidisciplinary involving faculty, postdoctoral researchers and graduate students working on the synthesis and processing, structural characterization, property evaluation, microstructure-property relationships and mathematical models relating micromechanisms to macroscopic behavior. The department has close collaborations with, and a number of faculty have joint appointments in, the Departments of Mechanical Engineering (mechanics and design), Chemical Engineering (fluids and environmental effects), Electrical and Computer Engineering (electronic devices), Physics, Chemistry and Biochemistry, and the BMES Program.

Materials Courses

LOWER DIVISION

10. Materials in Society, the Stuff of Dreams
(4) GOSSARD
Not open to engineering, pre-computer science, or computer science majors. Lecture, 3 hours; discussion, 1 hour. A survey of new technological substances and materials, the scientific methods used in their development, and their relation to society and the economy. Emphasis on uses of new materials in the human body, electronics, optics, sports, transportation, and infrastructure.

UPPER DIVISION

100A. Structure and Properties I
(3) STAFF
Prerequisites: Chemistry 1A-B; Physics 4; and, Mathematics 5A-B-C. Lecture, 3 hours.

100B. Structure and Properties II
(3) STAFF
Prerequisite: Materials 100A.
Not open for credit to students who have completed Materials 101. Lecture, 3 hours.

100C. Fundamentals of Structural Evolution
(3) STAFF
Prerequisites: Materials 100A or ECE 132; and, Materials 100B or Chemical Engineering 185 or ME 180. Lecture, 3 hours.
An introduction to the thermodynamic and kinetic principles governing structural evolution in materials: Phase equilibria, diffusion and structural transformations. Metastable structures in materials. Self-assembling systems. Structural control through processing and/or imposed fields. Environmental effects on structure and properties.

101. Introduction to the Structure and Properties of Materials
(3) STAFF
Prerequisite: upper-division standing. Not open for credit to students who have completed Materials 110AB.

135. Biophysics and Biomolecular Materials
(3) STAFF
Prerequisites: Physics 5 or 6C or 25. Same course as Physics 135.
Structure and function of cellular molecules (lipids, nucleic acids, proteins, and carbohydrates). Genetic engineering techniques of molecular biology. Biomolecular materials and biomedical applications (e.g., bio-sensors, drug delivery systems, gene carrier systems).

160. Introduction to Polymer Science
(3) KRAMER
Prerequisite: Chemistry 109A-B. Same course as Chemical Engineering 160.
Introductory course covering synthesis, characterization, structure, and mechanical properties of polymers. The course is taught from a materials perspective and includes polymer thermodynamics, chain architecture, measurement and control of molecular weight as well as crystallization and glass transitions.

162A. The Quantum Description of Electronic Materials
(4) HU
Prerequisites: ECE 130A-B and 134 with a minimum grade of C- in all, open to EE and materials majors only.
Same course as ECE 162A.

162B. Fundamentals of the Solid State
(4) COLEBROOK
Prerequisites: ECE 162A with a minimum grade of C-; open to EE and materials majors only.
Same course as ECE 162B.

185. Materials in Engineering
(3) LEVI, ODETTE
Prerequisite: Materials 100B or 101.
Same course as ME 185. Lecture, 3 hours.
Introduces the student to the main families of materials and the principles behind their development, selection, and behavior. Discusses the generic properties of metals, ceramics, polymers, and composites more relevant to structural applications. The relationship of properties to structure and processing is emphasized in every case.

186. Manufacturing and Materials
(3) LEVI
Prerequisites: ME 15 and 151C; and, Materials 100B or 101.
Same course as ME 186. Lecture, 3 hours.
Introduction to the fundamentals of common manufacturing processes and their interplay with the structure and properties of materials as they are transformed into products. Emphasis on process understanding and the key physical concepts and basic mathematical relationships involved in each of the processes discussed.

GRADUATE COURSES

200A. Thermodynamic Foundation of Materials
(4) KRAMER
Lecture, 4 hours.
The microscopic statistical mechanical foundations of the macroscopic thermodynamics of materials, with applications to ideal and non-ideal gases, electrons and photons in solids, multicomponent solutions, phase equilibria in single and multicomponent systems, and capillarity.

208B. Electronic and Atomic Structure of Materials
(4) VAN DE WALLAE
Lecture, 4 hours.

200C. Structure Evolution
(4) LEVI
Lecture, 4 hours.

201. Thermodynamics and Phase Equilibria
(3) STAFF
Prerequisite: consent of instructor.
Same course as ME 262. Lecture, 3 hours.
Advanced thermodynamics with emphasis on phase equilibria, properties of solutions, and multicomponent systems.

203. Transition Metal Oxides
(3) CHEETHAM
Same course as Chemistry 267. Lecture, 3 hours.
Introduction to transition metal oxides. Ligand field theory. Structural basis of magnetism.

204. Introduction to Magnetism and Magnetic Materials
(3) SPALDING

205. Wide-Band Gap Materials and Devices
(3) NAKAMURA
Lecture, 3 hours.
Optical and electrical properties of GaN, ZnSe, SiC, and diamond-based semiconductor materials. Theory and practical application of wide-band gap materials in devices. Materials growth techniques of MOCVD, CVD, and MBE are discussed. Applications of these materials in blue lasers, LEDs (UV, blue, green, and white) are emphasized.

206A. Fundamentals of Electronic Solids I
(4) KROEMER, PETROFF
Prerequisite: ECE 162A-B.
Same course as ECE 215A.

206B. Fundamentals of Electronic Solids II
(4) GOSSARD
Prerequisite: ECE 162A-B.
Same course as ECE 215B.
Phonons, electron scattering, electronic transport, selected optical properties, heterostructures, effective mass, quantum wells, two-dimensional electron gas, quantum wires, deep levels, and crystal binding.
207. Mechanics of Materials (3) STAFF
Same course as Mechanical Engineering 219. Lecture, 3 hours.
Matrices and tensors, stress deformation and flow, compatibility conditions, constitutive equations, field equations and boundary conditions for solids and fluids, applications in solid and fluid mechanics.

208. Crystallography and Structure Determination (3) STAFF
Prerequisite: consent of instructor.
Not open for credit to students who have completed Materials 209B. Lecture, 3 hours.
Topics in structure determination: structure factors, intensity data collection, electron diffraction, X-ray, neutron diffraction methods, atom positions in crystal lattices, X-ray powder diffraction, computer simulation methods, crystallography and applications.

209A. Crystallography and Diffraction Fundamentals (3) SPECK
Diffraction theory: Fourier transformation, schrodinger equation, Maxwell's equations, kinematical theory, Fresnel diffraction, Fraunhofer diffraction, scattering of x-rays, electrons and neutrons by isolated atoms and assemblies of atoms, pair correlation and radial distribution functions. Symmetry operations, point groups, space groups.

209B. X-Ray Diffraction II: Advanced Methods (3) SPECK
Prerequisite: consent of instructor. Lecture, 3 hours.

209BL X-Ray Diffraction I: Principles and Practice (3) SHEHAB
Laboratory, 3 hours.
Exposes students to practical aspects of powder and single crystal x-ray diffraction, including the determination and refinement of crystal structures.

209C. Electron Microscopy II: Crystalline Materials (3) STAFF
Prerequisite: consent of instructor. Lecture, 3 hours.
Electron microscopy to study defect structures, elasticity and inelastic electron scattering, point defects and impurity complexes. Dynamic analysis of dislocation structure. Image contrast and electron microscopy. (3) CLARK

209CL. Electron Microscopy I: Principles and Practice (4) STEMMER
Recommended preparation: students should show a need for TEM in their research. Part of the course involves analysis of student's own samples. Students encouraged to enroll in MATR 209C before or after MATRL 209CL. Lecture, 2.5 hours; laboratory, 3 hours. Laboratory course with lecture component. Topics include: TEM alignment, basic functions, electron diffraction and reciprocal space, basic imaging, bright field and dark field, diffraction contrast, quantitative analysis of defects, HREM image simulation. Course also involves TEM sample preparation.

211A. Engineering Quantum Mechanics I (4) STAFF
Prerequisites: ECE 162A-B. Students must have some knowledge of linear algebra. Same course as ECE 211A. Lecture, 4 hours.
Wave-particle duality; bound states; uncertainty relations; expectation values and operators; variational principle; eigenfunction expansions; perturbation theory I. Treatment matches needs and background of ECE and materials students emphasizing solid state or quantum electronics.

211B. Engineering Quantum Mechanics II (4) STAFF
Prerequisites: ECE 211A or Materials 211A, or ECE 215A or Materials 206A. Same course as ECE 211B. Lecture, 4 hours.
Continuation of Materials 211A; symmetry and degeneracy; electrons in crystal defects; momentum; perturbation theory II; transition probabilities; quantized fields and radiative transitions; magnetic fields; electron spin; indistinguishable particles.

214. Advanced Topics in Equilibrium Statistical Mechanics (3) STAFF
Same course as Chemical Engineering 214B. Not open for credit to students who have completed Chemical Engineering 214. Recommended preparation: a course in physical chemistry. Lecture, 3 hours.
Application of the principles of statistical mechanics and thermodynamics to treat classical fluid systems at equilibrium. Topics include fluid state theory, computer simulation methods, critical phenomena and scaling principles, interfacial statistical mechanics, and electrolyte theory.

215A. Semiconductor Device Processing (4) STAFF
Prerequisites: ECE 162A-B, and 213. Lecture, 3 hours; discussion, 1 hour. Intensive theoretical and laboratory instruction in solid-state device and integrated circuit fabrication. Topics include 1) semiconductor material properties and characterization; 2) phase diagrams; 3) diffusion; 4) thermal oxidation; 5) vacuum processes; 6) thin-film deposition; 7) scanning electron microscopy. Both gallium arsenide and silicon technologies are presented. Howie Whelan equations, dispersion surface.

215B-C. Semiconductor Device Processing (4-4) GOSSARD, HU
Prerequisites: Materials 215A, and 209B. Same course as ECE 220B-C. Lecture, 3 hours, discussion, 1 hour. Continued theoretical and laboratory instruction in the fundamentals, the design, the fabrication, and the characterization of junction and field-effect devices. Topics will include bipolar characterization, design, fabrication, and testing. The laboratory effort initiated in Materials 215A will be continued in these two quarters.

216. Defects in Semiconductors (3) STAFF
Prerequisites: ECE 162A-B. Same course as ECE 216B. Lecture, 3 hours.

217. Molecular Beam Epitaxy and Band Gap Engineering (3) GOSSARD
Prerequisites: ECE 162A-B, and 213. Same course as ECE 217. Lecture, 3 hours. Fundamentals and recent research developments in the growth and properties of thin crystalline films of electronic and optical materials by the process of molecular beam epitaxy. Artificially structured materials with quantized electron confinement and artificially engineered electronic band structure properties. (normally offered alternate years)

218. Introduction to Inorganic Materials (3) CHEETHAM
Prerequisite: Chemistry 274.
Same course as Chemistry 277.
Structures of inorganic materials: close-packing, linking of simple polyhedral units. Factors that control structure: ionic radii, covalency, ligand field effects, metal-metal bonding, electron/atom ratios. Structure-property relationships in e.g. spinels, garnets, perovskites, rutiles, fluorides, zeolites, B-aluminas, graphites, common inorganic glasses.

219. Phase Transformations (3) STAFF
Prerequisite: consent of instructor. Lecture, 3 hours.
Introduction to the unified concepts underlying phase transformations in solids, metals, ceramics, polymers, and electronic materials. Includes the thermodynamics, kinetics, crystallography and microstructural characteristics of displacive and diffusionless transformations. Role of elasticity, compositional, configurational, electrical, magnetic and gradient energy contributions.

220. Mechanical Behavior of Materials (3) ZOK, GOETTE
Prerequisites: Materials 207; consent of instructor.

221. Introduction to Structural Materials (3) ZOK
Not open for credit to students who have completed Materials 220. Lecture, 3 hours.
Introduction to structure-property relations in engineering materials, including polymers, metals, and ceramics. Elastic, plastic, and creep deformation. Fracture processes. Strengthening and toughening mechanisms.

222A. Colloids and Interfaces I (3) ISAELACHVILI
Prerequisite: consent of instructor.
Same course as Chemical Engineering 222A and BMSE 222A. Lecture, 3 hours.
Introduction to the various intermolecular interactions in solutions and colloidal systems: Van der Waals, electrostatic, hydrophilic, solvation, H-bonding. Introduction to colloidal systems: particles, micelles, polymers, etc. Surfaces: wetting, contact angles, surface tension, etc.

222B. Colloids and Interfaces II (3) STAFF
Prerequisite: consent of instructor. Lecture, 3 hours.

224. Optical and Luminescent Materials (3) CLARKE
Lecture, 2 hours.
Description of the principles underlying the optical and luminescent behavior of materials illustrated with applications drawn from phosphors, optical fibers, optical memories, and electro-optical components and immuno-assay techniques. Fundamental concepts of absorption and emission, and their relation to electronic structure and crystal properties.

225. Introduction to Electronic Materials (3) SPALDIN
Prerequisite: Materials 100A and 100C or equivalent.
Not open for credit to students who have completed Materials 162B or ECE 162B. Lecture, 3 hours.

226. Electrical and Functional Crystals and Ceramics (3) CLARKE
Lecture, 3 hours.
Description of the principles underlying the behavior of functional crystals and ceramics, focusing on dielectrics, piezoelectrics, ferroelectrics to linear and nonlinear materials. Fundamental concepts, tensorial and mathematical description of functional behavior; point defects, and applications.

227. Metal-Organic Chemical Vapor Deposition (3) DENBAARS
Lecture, 3 hours.
Electronic and optical properties of thin films
228. Computational Materials (3) CLARKE
Lecture, 3 hours.
Basic computational techniques and their application to simulating the behavior of materials. Techniques include finite difference methods, Monte Carlo, molecular dynamics, cellular automata, and simulated annealing. (normally offered alternate years)

230. Elasticity and Plasticity (3) MCMEEKING
Prerequisites: Materials 207 or ME 219
Same course as ME 230.

234. Fracture Mechanics (3) STAFF
Prerequisites: Materials 207.
Same course as ME 275. Lecture, 3 hours.

238A. Rheology of Polymeric Liquids (3) EROKHIN
Same course as Chemical Engineering 238B.
An introduction to molecular and microscale theories for the viscoelastic behavior of complex fluids: suspensions, colloidal dispersions, liquid crystals, dilute polymer solutions.

238B. Rheology of Polymeric Liquids (3) STAFF
Same course as Chemical Engineering 238B.
Continuation of Materials 238A. Emphasis of the second term is on concentrated systems and polymeric liquids, reptation theory and extensions of reptation theories to complex architectures in the linear viscoelastic regime. Nonlinear Rheology for polymers.

240. Finite Element Structural Analysis (3) STAFF
Prerequisites: Materials 207 or equivalent.
Same course as ME 271. Lecture, 3 hours.

251A. Processing of Inorganic Materials (3) LANGE
Prerequisite: consent of instructor.
Same course as Chemical Engineering 219A. Not open for credit to students who have completed Nuclear Engineering 219A. Lecture, 3 hours.
Fundamental concepts are presented for the synthesis of inorganic materials (zeolites, mesoporous materials, and epitaxial films) via chemical routes, and the processing of powders to form engineering shapes. Core techniques are fundamentals for manipulating the forces between particles that control rheological properties, particle packing and the plastic/elastic transition.

251B. Densification and Microstructural Control (3) LANGE
Prerequisite: consent of instructor.
Same course as Chemical Engineering 219B. Lecture, 3 hours.

253. Liquid Crystal Materials (4) SAFINYA
Prerequisite: consent of instructor. Lecture, 3 hours; laboratory, 2 hours.
Thermotropic and lyotropic liquid crystal (LCs). Classification and phase transitions. LCs in display technologies. Laboratory experimentation using X-ray diffraction and polarized optical microscopy to characterize LC phases.

261. Composite Materials (3) ZOK
Prerequisite: consent of instructor.
Same course as ME 265. Lecture, 3 hours.

262. Structural Ceramics (3) STAFF
Prerequisite: consent of instructor.
Same course as Chemical Engineering 262.
Lecture, 3 hours.

263. Thin Films and Multilayers (3) EVANS
Lecture, 3 hours.

265. Nanophase and Nanoparticulate Materials (3) SESHAADI
Prerequisite: Materials 218 or equivalent. Lecture, 2.5 hours.
Course introduces graduate student to nanophase and nanoparticle inorganic materials and their applications. Emphasis on how the properties of materials change when their size is diminished. The manner in which nanomaterials (particularly nanoparticulate materials) bridge the world of molecules with the world of solids is shown. Preparation, characterization, and applications of nanomaterials is an integral part of the course.

267. Confined Electrons and Photons in Semiconductor Structures (3) PRECHT
Prerequisites: Materials 162A-B or ECE 162A-B.
Lecture, 3 hours.

273. Experiments in Macromolecular Materials (3) STAFF
Prerequisite: consent of instructor. Lecture, 3 hours.

274. Solid State Inorganic Materials (3) STAFF
Prerequisites: Chemistry 173A-B or equivalent.
Optical properties and uses of solid state materials.

276A. Biomolecular Materials I: Structure and Function (3) SAFINYA
Prerequisite: consent of instructor. Lecture, 3 hours.
Introduction to the synthesis, physical characterization, and application to the synthesis of biological macromolecules. Biochemistry and drug delivery systems. Tissue engineering. Protein synthesis using recombinant nucleic acid methods: advanced materials development. (normally offered alternate years)

276B. Biomolecular Materials II: Applications (3) SAFINYA
Prerequisite: Physics 135 or Materials 276A.
Lecture, 3 hours.
Interactions and self assembly in biomolecular materials. Chemical and drug delivery systems. Tissue engineering. Protein synthesis using recombinant nucleic acid methods: advanced materials development. (normally offered alternate years)

277. Synthesis of Biomolecular Materials (3) STAFF
Prerequisite: consent of instructor. Lecture, 3 hours.

278. Interactions in Biomolecular Complexes (3) SAFINYA
Prerequisite: consent of instructor. Lecture, 3 hours.
Focuses on the interactions, structures, and functional properties of complexes comprised of supramolecular assemblies of biological molecules. Systems include lipid membranes, lipid-DNA complexes, and assemblies of proteins of the cell cytoskeleton.

280. Defects in Semiconductors (3) BAZAN
Introduction to the science and engineering of organic semiconductors. A connection is made between the two main classes of related materials: small molecules and conjugated polymers. Electronic structure is presented together with techniques for energy level measurements and the theory of charge carrier transport. Optical properties, including emission, energy transfer and electron transfer, are discussed within the context of optically amplified biosensors. Applications in field effect transistors, light emitting diodes and solar cells are reviewed.
Mechanical Engineering

Department of Mechanical Engineering, Engineering II, Room 2355; Telephone (805) 893-2430
Web site: www.me.ucsb.edu

Chair: Kimberly Turner
Vice Chairs: Francesco Bullo and Jeffrey M. Moehlis

Faculty
Bassam Bamieh, Ph.D., Rice University, Professor (control systems design with applications to fluid flow problems)
Glenn E. Beltz, Ph.D., Harvard, Professor (solid mechanics, materials, aeronautics, engineering education)
Ted D. Bennett, Ph.D., UC Berkeley, Associate Professor (thermal science, laser processing)
David Bothman, B.S., UC San Diego, Lecturer
Francesco Bullo, Ph.D., California Institute of Technology, Professor (motion planning and coordination, control systems, distributed and adaptive algorithms)
David R. Clarke, Ph.D., University of Cambridge, Professor (electrical ceramics, thermal barrier coatings, piezoelectroscopy, mechanics of microelectronics) *3
Anthony G. Evans, Ph.D., Imperial College, London, Professor, Director of Center for Multifunctional Materials and Structures (thermstructural materials, ultralight structures, multifunctional materials and devices, actuating structures) *3
Frederic Gibou, Ph.D., University of California, Los Angeles, Associate Professor (computational science and engineering) *2
Gary S. Hansen, Ph.D., University of Michigan, Associate Professor (technology management program)
George Homys, Ph.D., University of Illinois, Professor (hydrodynamic stability, thermal convection, thin film hydrodynamics, flow in microgeometries and in porous media, polymer fluid mechanics)
Keith T. Kedward, Ph.D., Rice University, Professor (design of composite systems)
Mustafa Khammash, Ph.D., Rice University, Professor (robust analysis and synthesis of control systems and controls in biological systems)
Rouslan Krechetnikov, Ph.D., Moscow Institute of Physics & Technology, Assistant Professor (fluid mechanics, complex fluid interfaces, analytical mechanics, dynamical systems, stability theory, applied mathematics)
Stephen Lagutta, M.S., University of California, Los Angeles, Lecturer (biomedical engineering design)
Carlos Levi, Ph.D., University of Illinois at Urbana-Champaign, Professor (conceptual design, synthesis and evolution in service of structural and inorganic materials, especially for high temperature applications) *3
Glenn E. Lucas, Ph.D., Massachusetts Institute of Technology, Professor (mechanical properties of structural materials, environmental effects, structural reliability) *1
Eric F. Matthes, Ph.D., California Institute of Technology, Professor (heat transfer, fluid mechanics, rheology)
Robert M. McMeeking, Ph.D., Brown University, Professor (mechanics of materials, fracture mechanics, plasticity, computational mechanics) *3
Eckart Meiburg, Ph.D., University of Karlsruhe, Professor (computational fluid dynamics, fluid mechanics)
Carl D. Meinhart, Ph.D., University of Illinois at Urbana-Champaign, Professor (wall turbulence, microfluidics, flows in complex geometries)
Igor Mezić, Ph.D., California Institute of Technology, Professor (applied mechanics, non-linear dynamics, fluid mechanics, applied mathematics)
Frederick Milstein, Ph.D., UC Los Angeles, Professor (mechanical properties of materials) *3
Jeffrey M. Moehlis, Ph.D., University of California, Berkeley, Associate Professor (nonlinear dynamics, fluid mechanics, biological dynamics, applied mathematics)
G. Robert Odette, Ph.D., Massachusetts Institute of Technology, Professor (deformation and fracture, high performance materials for use in severe environments) *3
Bradley E. Paden, Ph.D., UC Berkeley, Professor (control theory, kinematics, robotics)
Sumita Pennathur, Ph.D., Stanford University, Assistant Professor (application of microfabrication techniques and micro/nanoscale flow phenomena)
Linda R. Petzold, Ph.D., University of Illinois at Urbana–Champaign, Professor, Director of Computational Science and Engineering Graduate Emphasis (computational science and engineering; systems biology) *2
Hyongsok Tom Soh, Ph.D., Stanford University, Associate Professor (microelectromechanical systems, integrated biosensors, multi-functional biomaterials)
Theofanis G. Theofanous, Ph.D., University of Minnesota, Professor, Director of Center for Risk Studies and Safety (nuclear and chemical plant safety, multiphase flow, thermal hydraulics) *1
Kimberly L. Turner, Ph.D., Cornell University, Professor (microelectromechanical systems, dynamics, solid mechanics, measurement and characterization of microsystems motion and device parameters)
Megan Valentine, Ph.D., Harvard University, Assistant Professor (single-molecule biophysics, cell mechanics, motor proteins, biomaterials)
Henry T. Yang, Ph.D., Cornell University, Professor (aerospace structures, structural dynamics and stability, transonic flutter and aeroelasticity, intelligent manufacturing systems)
Walter W. Yuen, Ph.D., UC Berkeley, Professor (thermal science, radiation heat transfer, heat transfer with phase change, combustion)

Emeriti Faculty
John C. Bruch, Jr., Ph.D., Stanford University, Professor Emeritus (applied mathematics, numerical solutions and analysis)
Roy S. Hickman, Ph.D., UC Berkeley, Professor Emeritus (fluid mechanics, physical gas dynamics, computer-aided design)

Frederick A. Leckie, Ph.D., Stanford University, Professor Emeritus (mechanics of materials, engineering design)

Wilbert J. Lick, Ph.D., Rensselaer Polytechnic Institute, Professor (oceanography and limnology, applied mathematics)

Noel C. MacDonald, Ph.D., UC Berkeley, Kavli Professor in MEMS Technology (microelectromechanical systems, applied physics, materials, mechanics, nanofabrication) *3

Ekkehard P. Marschall, Dr. Ing., Technische Hochschule Hannover, Professor Emeritus (thermodynamics, heat and mass transfer, desalination, energy conversion, experimental techniques)

Stephen R. McLean, Ph.D., University of Washington, Professor (fluid mechanics, physical oceanography, sediment transport)

Thomas P. Mitchell, Ph.D., California Institute of Technology, Professor Emeritus (theoretical and applied mechanics)

Marshall Tulin, M.S., Massachusetts Institute of Technology, Professor Emeritus, Ocean Engineering Laboratory Director (hydrodynamics, aerodynamics, turbulence, cavitation phenomena, drag reduction in turbulent flows)

James P. Vanyo, Ph.D., UC Los Angeles, Professor Emeritus (rotating nongrid bodies, fluid dynamics)

1 Joint appointment with the Department of Chemical Engineering.
2 Joint appointment with the Department of Computer Science.
3 Joint appointment with the Department of Materials.

Affiliated Faculty

Paul J. Atzberger (Mathematics)
Hector Ceniceros (Mathematics)
Patricia Holden (Bren School of Environmental Science and Management)
Arturo Keller (Bren School of Environmental Science and Management)
Gary Leal (Chemical Engineering)
Sally Maclntyre (Ecology, Evolution & Marine Biology)

The undergraduate program in mechanical engineering is accredited by the Engineering Accreditation Commission of ABET, 111 Market Street, Suite 1050, Baltimore, MD, 21202-4012 – telephone: (410) 347-7700. We offer a balanced curriculum of theory and application, involving: preparation in basic science, math, computing and writing; a comprehensive set of engineering science and laboratory courses; and a series of engineering design courses starting in the freshman year and concluding with a three course sequence in the senior year. Our students gain hands-on expertise with state-of-the-art tools of computational design, analysis, and manufacturing that are increasingly used in industry, government, and academic institutions. In addition, the Department has a 15-unit elective program that allows students to gain depth in specific areas of interest, while maintaining appropriate breadth in the basic stem areas of the discipline. All students participate in a widely recognized design project program which includes projects sponsored by industry, UCSB researchers, as well as intercollegiate design competitions. The project program has been expanded to emphasize entrepreneurial product-oriented projects.

Mission Statement

We offer an education that prepares our students to become leaders of the engineering profession and one which empowers them to engage in a lifetime of learning and achievement.

Educational Objectives for the Undergraduate Program

It is the objective of the Mechanical Engineering Program to produce graduates who:

• Successfully practice in either the traditional or the emerging technologies comprising mechanical engineering;
• Are successful in a range of engineering graduate programs including those in mechanical, environmental and materials engineering;
• Have a solid background in the fundamentals of engineering allowing them to pass the Fundamentals of Engineering examination;
• Are active in professional societies.

In order to achieve these objectives, the Department of Mechanical Engineering is engaged in a very ambitious effort to lead the discipline in new directions that will be critical to the success of 21st century technologies. While maintaining strong ties to stem areas of the discipline, we are developing completely new cross-cutting fields of science and engineering related to topics such as: microscale engineering and microelectrical-micromechanical systems; dynamics and controls and related areas of sensors, actuators and instrumentation; advanced composite materials and smart structures; computation, simulation and information science; advanced energy and transportation systems; and environmental monitoring, modeling and remediation.

Program Outcomes

Upon graduation, students in the mechanical engineering B.S. degree program:

1. Should possess a solid foundation in, and be able to apply the principles of, mathematics, science, and engineering to solve problems and have the ability to learn new skills relevant to his/her chosen career.
2. Have the ability to conduct and analyze data from experiments in dynamics, fluid dynamics, thermal science and materials, and should have been exposed to experimental design in at least one of these areas.
3. Should have experienced the use of current software in problem solving and design.
4. Should demonstrate the ability to design useful products, systems, and processes.
5. Should be able to work effectively on teams.
6. Should have an understanding of professional and ethical responsibilities.
7. Should be able to write lab reports and design reports and give effective oral presentations.
8. Should have the broad background in the humanities and the social sciences, which provides an awareness of contemporary issues and facilitates an understanding of the global and societal impact of engineering problems and solutions.
9. Should be a member of the American Society of Mechanical Engineers.

Undergraduate Program

Bachelor of Science—Mechanical Engineering

Note: Schedules should be planned to meet both General Education and major requirements. Detailed descriptions of these requirements are presented in the College of Engineering Announcement and General Education booklet. A minimum of 190 units is required for graduation.

Preparation for the major

All undergraduate majors in the department are required to meet a set of minimum unit and grade-point requirements and a set of General Education requirements which are common to all undergraduate majors in the College of Engineering. In addition, required preparation for the major consists of the following lower-division courses (or their equivalents if taken elsewhere): Engineering 3; Mechanical Engineering 6, 10, 14, 15, 16, 17; Chemistry 1A-B or 2A-B, 1AL-Bl or 2AC-BC; Mathematics 3A-C, 5A-B-C; Physics 1, 2, 3, 4, and 3L, 4L.

Students who are not Mechanical Engineering majors may be permitted to take lower division mechanical engineering courses, subject to meeting prerequisites and grade-point average requirements, availability of space, and consent of the instructor.

Upper-division major

The following 70 units are required: Materials 101; Mechanical Engineering 104, 105, 140A, 151A-B-C, 152A-B, 153, 154, 155A, 156A-B, 163, 189A-B-C, and 15 units of departmental electives.

The mechanical engineering elective courses allow students to acquire more in-depth knowledge in one of several areas of specialization, such as those related to: the environment; design and manufacturing; thermal and fluid sciences; structures, mechanics, and materials; and dynamics and controls. A student’s specific elective course selection is subject to the approval of the department advisor.

Courses required for the pre-major or major, inside or outside of the Department of Mechanical Engineering, cannot be taken for the passed/not passed grading option. They must be taken for letter grades.

Research Opportunities

Upper-division undergraduates have opportunities to work in a research environment with faculty members who are conducting current research in the various fields of mechanical engineering. Students interested in pursuing undergraduate research projects should contact individual faculty members in the department.

Mechanical Engineering Courses
LOWER DIVISION

6. Basic Electrical and Electronic Circuits
(4) KHAMMASH, SOH
Prerequisite: Physics 3-5L; Mathematics 2C; open to ME majors only.
Not open for credit to students who have completed ECE 2A or 2B, or ECE 6A or 6B.
Introduction to basic electrical circuits and electronics. Includes Kirchhoff’s laws, phasor analysis, circuit elements, operational amplifiers, and transistor circuits.

(4) LAGUETTE
Prerequisite: ME majors only.
Introduction to engineering graphics, CAD, and freehand sketching. Develop CAD proficiency using advanced 3-D software. Graphical presentation of design: views, sections, dimensioning, and tolerancing.

11. Introductory Concepts in Mechanical Engineering
(1) BOTHMAN, FIELDS, EVANS, BELTZ
Prerequisite: lower-division standing.
The theme question of this course is “What do mechanical engineers do?” Survey of mechanical and environmental engineering applications. Lectures by mechanical engineering faculty and practicing engineers.

12. Manufacturing Processes
(1) STAFF
Prerequisite: ME majors only.
Processes used to convert raw material into finished objects. Overview of manufacturing processes including: casting, forging, machining, presswork, plastic and composite processing. Videos, demonstrations, and tours illustrate modern industrial practice. Selection of appropriate processes.

125. Introduction to Machine Shop
(1) BOTHMAN
Prerequisite: ME majors only.
Basic machine shop skills course. Students learn to work safely in a machine shop. Students are introduced to the use of hand tools, the lathe, the milling machine, drill press, saws, and precision measuring tools. Students apply these skills by completing a project.

14. Statics
(4) BELTZ, MILSTEIN, TURNER
Prerequisite: Physics 1 and Mathematics 3B; open to ME majors only.
Introduction to applied mechanics. Forces, moments, couples, and resultants; vector algebra; construction of free body diagrams; equilibrium in 2- and 3-dimensional analysis; analysis of frames, machines, trusses and beams; distributed forces; friction.

15. Strength of Materials
(4) BELTZ, MILSTEIN, KEDWARD, LAGUETTE
Prerequisite: ME 14; open to mechanical engineering majors only.
Hooke’s law and properties of structural materials. Methods of sections and virtual work and energy methods. Design applications to engineering structures, problems of tension, torsion, flexure and combined loading. Design beyond the elastic limit.

(4) TURNER, BAMIEN
Prerequisites: Physics 2; ME 14; and, Mathematics 5C; (may be taken concurrently); open to ME majors only.
Not open for credit to students who have completed ME 163A.

17. Mathematics of Engineering
(3) MOEHLIS, HOCHSTRASSER
Prerequisite: Engineering 2; Mathematics 5B (may be taken concurrently); open to ME majors only.
Introduction to basic numerical and analytical methods, with implementation using MATLAB. Topics include root finding, linear algebraic equations, introduction to matrix algebra, determinants, inverses and eigenvalues, curve fitting and interpolation, and numerical differentiation and integration. (S, M)

95. Introduction to Mechanical Engineering
(1-4) STAFF
Prerequisite: consent of instructor.
May be repeated for credit to a maximum of 6 units. Participation in projects in the laboratory or machine shop. Projects may be student- or faculty-originated depending upon student interest and consent of faculty member.

97. Mechanical Engineering Design Project
(1-4) STAFF
Prerequisite: consent of instructor.
May be repeated for maximum of 12 units, variable hour.
Course offers students opportunity to work on established departmental design projects. P/NP grading, does not satisfy technical elective requirement.

99. Introduction to Research
(1-3) STAFF
Prerequisite: consent of instructor.
May be repeated for maximum of 6 units, variable hour.
Directed study to be arranged with individual faculty members. Course offers exceptional students an opportunity to participate in a research group.

UPPER DIVISION

100. Professional Seminar
(1) STAFF
Prerequisite: undergraduate standing.
May be repeated for up to 3 units. May not be used as a departmental elective.
A series of weekly lectures given by university staff and outside experts in all fields of mechanical and environmental engineering.

104. Sensors, Actuators and Computer Interfacing
(3) BAMIEN, PADEN
Prerequisites: ME 6; open to ME majors only.
Interfacing of mechanical and electrical systems and mechatronics. Basic introduction to sensors, actuators and computer interfacing and control. Transducers and measurement devices, actuators, A/D and D/A conversion, signal conditioning and filtering. Practical skills developed in weekly lab exercises.

105. Mechanical Engineering Laboratory
(4) BENNETT, MATTHYS, VALENTINE
Prerequisite: ME 151B, 152B, 163; and, Materials 101 or 100B.
Introduction to fundamental engineering laboratory measurement techniques and report writing skills. Experiments from thermosciences, fluid mechanics, mechanics of materials, science and environmental engineering. Introduction to modern data acquisition and analysis techniques. (S, M)

106A. Advanced Mechanical Engineering Laboratory
(3) KHAMMASH, BAMIEN
Prerequisite: ME 155A.
An advanced lab course with experiments in dynamical systems and feedback control design. Students will troubleshoot, and perform detailed, multi-session experiments.

106B. Mechanics, Materials and Structures Laboratory
(3) ZOK, EVANS
Prerequisites: ME 15; ME 154; ME 156A; and, Materials 100B or 101.
Experiments on mechanical behavior of materials and structures. Assessment of analytical and finite element methods for mechanical design, with applications to optimization of lightweight structures.

106C. Advanced Thermo/Fluids Laboratory
(3) BENNETT
Prerequisite: ME 105 and 151A-B, ME 151C (may be concurrent) and ME 152A-B.
Perform thermo-fluid experiments that emphasize elements of thermodynamics, heat transfer, and fluid mechanics. This laboratory course stresses critical thinking skills required to construct and perform experiments independently, and to investigate physical phenomena experimentally.

110. Aerodynamics and Aeronautical Engineering
(3) BELTZ, MEINHART
Prerequisite: ME 14 and 152A.
Concepts from aerodynamics, including lift and drag analysis for airfoils as well as aircraft sizing/scaling issues. Structural mechanics concepts are applied to practical aircraft design. Intended for students considering a career in aeronautical engineering.

112. Energy Conversion
(3) MATTHYS
Prerequisite: ME 151C and 152; or, Chemical Engineering 110B and 120A.
Overview of energy usage and production from prehistoric to present times (technical, environmental, and societal issues). Technical analysis of the modern means of energy (fossil, nuclear, hydro, wind, solar, geothermal, biomass, etc.) operating principles, hardware, engineering issues, environmental impact, etc.

114. Water Supply and Pollution Control
(3) STAFF
Prerequisite: ME 152A or Chemical Engineering 120A.

119. Introduction to Coastal Engineering
(3) STAFF
Prerequisite: ME 152A.
Quantitative description of waves and tides: refraction, shoaling. Nearshore circulation. Sediment characteristics and transport; equilibrium beach profile; shoreline protection.

124. Advanced Topics in Transport Phenomena and Safety
(3) THEOFANOUS
Prerequisite: Chemical Engineering 120A-B-C, or ME 151A-B and ME 152A.

125AA-ZZ. Special Topics in Mechanical Engineering
(3) STAFF
Prerequisite: Consent of instructor.
May be repeated for credit to a maximum of 12 units provided letter designations are different. Students are advised to consult their faculty advisor before making their course selection.

Individual courses each concentrating on one area in the following subjects: applied mechanics, fluid mechanics, materials science, mechanics of solids and structures, ocean and coastal engineering, robotics, theoretical mechanics, thermal sciences, and recent developments in mechanical engineering.

128. Design of Biomedical Devices
(3) LAGUETTE
Prerequisite: Mechanical Engineering 10, 14, 15, 16, and 153; or open to ME majors only.
Introductory course addresses the challenges of biomedical device design, prototyping and testing, material considerations, regulatory requirements, design control, human factors, and ethics.

134. Advanced Thermal Science
(3) MATTHYS, YUEN, HOMSY
Prerequisite: ME 151C.
This class will address advanced topics in fluid mechanics, heat transfer, and thermodynamics. Topics of interest may include combustion, phase change,
136. Introduction to Multichip Flows
(3) THEOFANOUS
Prerequisites: Chemical Engineering 120A-B-C or ME 151C and 152A.
Same course as Chemical Engineering 136.
Development from basic concepts and techniques of fluid mechanics and heat transfer, to local behavior in multiphase flows. Key multiphase phenomena, related physics. Extension of local conservation principles to usable formulations in multiphase flows. Modelling approaches. Practical examples.

138. Risk Assessment and Management
(3) THEOFANOUS
Prerequisites: ME 151B and 152A, or Chemical Engineering 120A-B-C.
Same course as Chemical Engineering 138.

140A. Numerical Analysis in Engineering
(3) HOMSY, MOELIS, GIROU, MEIBURG
Prerequisites: ME 17 or Chemical Engineering 132A; or ME and Chemical Engineering majors only.
Numerical analysis and analytical solutions of problems described by linear and nonlinear differential equations with an emphasis on MATLAB. First and second order differential equations; systems of differential equations; linear algebraic equations, matrices and eigenvalues; boundary value problems; finite differences. (F)

140B. Theoretical Analysis in Mechanical Engineering
(3) MEIBURG, GIROU, MEIBURG
Prerequisites: ME 140A; open to ME and Chemical Engineering majors only.
Analysis of engineering problems formulated in terms of partial differential equations. Solutions of these mathematical models by means of analytical and numerical methods. Physical interpretation of the results.

141A. Introduction to MicroElectroMechanical Systems (MEMS)
(3) TURNER, PENNATHUR
Prerequisites: ME 104 and 163; or, ECE 130A and 137A, with a minimum grade of C-in both.
Same course as ECE 141A.
Analysis of MEMS actuators and displacement sensors with emphasis on the analysis of capacitor-based sensing and actuation. Analysis and design of operational models and circuits for capacitor sensors including feedback concepts. Vibration analysis of MEMS structures including wave equations for 'string' and bar structures. MEMS scaling concepts.

141B. MEMS: Semiconductor Processing and Device Characterization with Laboratory
(4) TURNER, PENNATHUR
Prerequisites: ME 141A or ECE 141A; and, Chemistry 18-8L.
Same course as ECE 141B.
Lectures and laboratory on semiconductor processing for MEMS. Description and analysis of key semiconductor and equipment used for MEMS. Design and fabrication of MEMS capacitor-actuator and accelerometers, includes a description of MEMS characterization tools.

141C. Introduction to Microfluidics and BioMEMS
(3) MEINHART
Prerequisite: ME 141A or ECE 141A, open to ME and EE majors only.
Same course as ECE 141C.
Introduces physical phenomena associated with microscale/nanoscale fluid mechanics, microfluidics, and bioMEMS. Analytical methods and numerical simulation tools for analysis of microfluids. (F)

151A. Thermosciences 1
(4) MATTHYS
Prerequisite: Physics 2; ME 14; and, Mathematics SC.
Basic concepts in thermodynamics, system analysis, energy, thermodynamic laws, and cycles. (F)

151B. Thermosciences 2
(4) MATTHYS
Prerequisite: ME 151A and 152A.
Introduction to heat transfer processes, steady and unsteady state conduction, multidimensional analysis. Introduction to convective heat transfer. (W)

151C. Thermosciences 3
(3) HOMSY, MATTHYS
Prerequisites: ME 151B and 152B; open to ME majors only.
Convective heat transfer, external and internal flow, forced and free convection, phase change, heat exchangers. Introduction to radiant heat transfer.

152A. Fluid Mechanics
(4) HOMSY, MATTHYS
Prerequisite: Mathematics SC and ME 16.
Introduction to the fundamental concepts in fluid mechanics and basic fluid properties. Basic equations of fluid flow. Dimensional analysis and similarity. Hydrodynamics. (F)

152B. Fluid Mechanics
(3) MEINHART, PENNATHUR
Prerequisites: ME 152A, open to ME majors only.
Incompressible viscous flow. Boundary-layer theory. Introductory considerations for one-dimensional compressible flow.

153. Introduction to Mechanical Engineering Design
(3) BELIZ, TURNER, KENNEDY, LAGUETTE
Prerequisites: ME 10 and 16; open to ME majors only.

154. Design and Analysis of Structures
(3) MCMEKING, KENNEDY, SHUGAR
Prerequisites: ME 15 and 16; open to ME majors only.
Introductory course in structural analysis and design. The theories of matrix structural analysis and finite element analysis for the solution of analytical and design problems in structures are emphasized. Lecture material includes structural theory compatibility method, slope deflection method, displacement method and force method. Topics include applications to bars, beams, trusses, frames, and solids.

155A. Control System Design
(3) BARMAN, ASTROM, BULLO
Prerequisite: ME 17; ME 140A (may be taken concurrently) and ME 163.
The discipline of control and its application. Dynamics and feedback. The mathematical models: transfer functions and state space descriptions. Simple control design (PID). Assessment of a control problem, specification, fundamental limitations, codesign of system and control.

155B. Control System Design
(3) PADE
Prerequisite: ME 155A.
Dynamic system modeling using state-space methods, controllability and observability, state-space methods for control design including pole placement and linear quadratic regulator methods. Observers and observer-based feedback controllers. Sampled-data and digital control. Laboratory exercises using MATLAB for simulation and control design.

156A. Mechanical Engineering Design I - (3) TURNER, LUCAS, EVANS
Prerequisite: ME 151C (may be concurrent), 152B, 153 and 154; and, MATLAB 101 or 100B; open to ME majors only.
The rational selection of engineering materials, and the utilization of Ashby-charts, stress, strain, strength, and fatigue failure consideration as applied to the design of machine elements. Lectures also support the development of system design concepts using assigned projects and involves the preparation of engineering reports and drawings.

156B. Mechanical Engineering Design II
(3) KENNEDY
Prerequisites: ME 156A; open to ME majors only.
Machine elements including gears, bearings, and shafts. Joint design and analysis: bolts, rivets, adhesive bonding and welding. Machine dynamics and fatigue. Design for reliability and certification standards. Topics covered are applied in practical design projects.

158. Computer Aided Design and Manufacturing
(3) BOOTHMAN
Prerequisites: ME 10 and 156A; open to ME majors only.
Engineering applications using advanced 3-D CAD software for plastic part designs and tooling. Topics include an overview of design for injection molded plastic parts, material selections and electronic tooling design via CAD and CNC system software. Emphasis is put into final design projects that are designed to be functional, manufacturable, and esthetically pleasing.

162. Introduction to Elasticity
(3) MCMEKING, BULLO
Prerequisites: ME 15 and 140A.

(3) MEIC, BULLO
Prerequisites: ME 16; open to ME majors only.
Not open for credit to students who have completed ME 163B.
Topics relating to vibration in mechanical systems; exact and approximate methods of analysis, matrix methods, generalized coordinates and Lagrange's equations, applications to systems. Basic feedback systems and controlled dynamic behavior.

166. Advanced Strength of Materials
(3) TURNER, KENNEDY
Prerequisite: ME 15.
Analysis of statically determinate and indeterminate systems using integration, area moment, and energy methods. Beams on elastic foundations, curved beams, stress concentrations, fatigue, and theories of failure for ductile and brittle materials. Photoelasticity and other experimental techniques are covered, as well as methods of interpreting in-service failures.

167. Structural Analysis
(3) YANG
Prerequisites: ME 15 or 165, and ME 140A.
Introduces introductory matrix methods for analysis of structures. Topics include review of matrix algebra and linear equations, basic structural theories, including the principle of superposition and energy theorems, truss bar, beam and plate frame elements, and programming techniques to realize these concepts.

169. Nonlinear Phenomena
(4) MEIC, KHAMMASH
Prerequisites: Physics 105A or ME 163; or upper-division standing in ECE.
Same course as ECE 183 and Physics 106. Not open for credit to students who have completed ME 163C.
An introduction to nonlinear phenomena. Flows and bifurcation in mechanical systems, chaos, fractals, strange attractors. Applications to physics, engineering, chemistry, and biology.

170A. Introduction to Robotics: Robot Mechanics
(4) PADEN, BULLO
Same course as ECE 181A.
Recommended preparation: ME 16.

170C. Introduction to Robotics: Robot Control
173. Control Systems Synthesis
(3) BAMIHE
Prerequisite: ME 155A.
Not open for credit to students who have completed ECE 147A.
Pole-placement, observer design, observer-based compensation, frequency and time-domain techniques, internal model principle, linear quadratic regulators, modeling uncertainty in signals and systems, robust stability and performance, synthesis for robustness.

185. Materials in Engineering
(3) LEVI, ODETTE
Prerequisite: Materials 100B or 101.
Same course as Materials 185.
Introduces the student to the main families of materials and the principles behind their development, selection, and behavior. Discusses the generic properties of metals, ceramics, polymers, and composites more relevant to structural applications. The relationship of properties to structure and processing is emphasized in every case.

186. Manufacturing and Materials
(3) LEVI, ODETTE
Prerequisites: ME 15 and 151C; and, Materials 100B or 101.
Same course as Materials 186.
Introduction to the fundamentals of common manufacturing processes and their interplay with the structure and properties of materials as they are transformed into engineering products. Emphasis on process understanding and the key physical concepts and basic mathematical relationships involved in each of the processes discussed.

189A-B-C. Capstone Mechanical Engineering Design Project
(2-2-2) LAGUETTE
Prerequisites: ME 153; and ME 156A (may be taken concurrently).
A three-quarter sequence with grades issued for each quarter. Students may not concurrently enroll in ME 197 and ME 189A-B-C with the same design project.
Students work in teams under the direction of a faculty advisor to tackle an engineering design project. Engineering communication, such as reports and oral presentations are covered. Course emphasizes practical, hands-on experience, and integrates analytical and design skills acquired in the companion ME 156 courses.

193. Internship in Industry
(1-5) STAFF
Prerequisite: consent of instructor and prior departmental approval needed.
Cannot be used as a departmental elective. May be repeated to a maximum of 2 units. Students obtain credit for a mechanical engineering related internship and/or industrial experience under faculty supervision. A 6-10 page written report is required for credit.

197. Independent Projects in Mechanical Engineering
(1-4) STAFF
Prerequisites: ME 1B; consent of instructor.
May be repeated for a maximum of 12 units. Variable hours. No more than 4 units may be used as departmental electives.
Special projects in design engineering. Course offers motivated students opportunity to synthesize academic skills by designing and building new machines.

199. Independent Studies in Mechanical Engineering
(1-5) STAFF
Prerequisite: consent of instructor; upper-division standing; completion of two upper-division courses in Mechanical Engineering.
Students must have a minimum of 3.0 grade-point average for the preceding three quarters and are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199D/199RA courses combined. No more than 4 units may be used as departmental electives. May be repeated to 12 units. Directed individual study.

GRADUATE COURSES

200. Professional Seminar
(1) MOMEKING, MILSTEIN, ODETTE
Prerequisite: consent of instructor.
A series of weekly lectures given by university staff and outside experts in all fields of mechanical and environmental engineering.

200P. Master of Science Project
(3) STAFF
Prerequisite: graduate standing.
A ten-week research project on an advanced topic in Mechanical Engineering.

201. Advanced Dynamics
(3) MEZIC
Newton's laws and symmetries, Newton, Laplace and principle of determinism, qualitative analysis of Newton's equations of motion, Hamiltonian mechanics, one degree of freedom (DOF) systems, two DOF systems, motion in central fields, application to molecular dynamics, control of classical dynamical systems, Lagrangian mechanics, chaos and ergodic theory, rigid body motion.

202. Advanced Dynamics
(3) MEZIC
Prerequisite: ME 201; graduate standing.

203. Special Topics in Dynamical Systems
(3) MEZIC
Prerequisite: ME 201.
Geometric mechanics, volume-preserving dynamical systems, molecular dynamics, Infinite dimensional dynamics and finite dimensional approximations including incompressible Euler equations and point vortex theory, transport and fluid mixing, control of measure-preserving systems, equilibrium and non-equilibrium statistical mechanics methods for vortex gases.

207. Faculty Research Seminar
(1) STAFF
A series of bi-weekly presentations given by ladder faculty members to familiarize graduate students with current department research projects. This course is required to be taken by all graduate students within the first year of arrival.

210A. Matrix Analysis and Computation
(4) STAFF
Prerequisite: consent of instructor.
Same course as Computer Science 211A, ECE 210A, Mathematics 206A, Chemical Engineering 211A, and Geology 251A. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language.

210B. Numerical Simulation
(4) PETZOLD
Prerequisite: consent of instructor.
Same course as Computer Science 211B, ECE 210B, Mathematics 206B, and Chemical Engineering 211B and Geology 251B. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language.

210C. Numerical Solution of Partial Differential Equations—Finite Difference Methods
(4) STAFF
Prerequisite: consent of instructor.
Same course as Computer Science 211C, ECE 210C, Mathematics 206C, Chemical Engineering 211C, and Geology 251C. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language.

210D. Numerical Solution of Partial Differential Equations—Finite Element Methods
(4) STAFF
Prerequisite: consent of instructor.
Same course as Computer Science 211D, ECE 210D, Mathematics 206D, Chemical Engineering 211D, and Geology 251D. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language.

211A-D. Numerical Methods
(4) STAFF
Same course as Computer Science 211A, ECE 210A, Mathematics 206A, Chemical Engineering 211A, and Geology 251A. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language.

212. Risk Assessment and Management
(3) THEOFANOUS
Prerequisite: consent of instructor.
Same course as Chemical Engineering 212.

215A. Applied Dynamical Systems I
(3) MOELIS
Prerequisite: graduate standing.
Phase-plane methods, non-linear oscillators, stability of fixed points and periodic orbits, invariant manifolds, structural stability, normal form theory, local bifurcations for vector fields and maps, applications from engineering, physics, chemistry, and biology.

215B. Applied Dynamical Systems II
(3) MOELIS
Prerequisites: ME 215A; graduate standing.
Local codimension two bifurcations, global bifurcations, chaos for vector fields and maps, Smale horseshoe, symbolic dynamics, strange attractors, universality, bifurcation with symmetry, perturbation theory and averaging, Melnikov's methods, canards, applications from engineering, physics, chemistry, and biology.

216. Level Set Methods
(4) GIBOU
Prerequisite: Computer Science 211C, or Chemical Engineering 211C, or ECE 210C, or ME 210C.
Same course as Chemical Engineering 226, ECE 226, and Computer Science 216.
Mathematical description of the level set method and design of the numerical methods used in its implementations (ENO-WENO, Godunov, Lax-Friedrich, etc.). Introduction to the Ghost Fluid Method. Applications in CFD, Materials Sciences, Computer Vision and Computer Graphics.

218. Introduction to Multiphase Flows
(3) THEOFANOUS
Prerequisite: consent of instructor.
Same course as Chemical Engineering 218.

219. Mechanics of Materials
(3) MCMEEKING, BELTZ
Same course as Materials 207.

220A-B. Fundamentals of Fluid Mechanics
(3-3) BENNETT, HOMSY, MEINHART
Prerequisites: ME 151A-B and 192A-B.

221. Advanced Viscous Flow
(3) HOMSY
Prerequisite: ME 220A.

Review the Navier-Stokes equations in velocity, pressure, and vorticity. Analyze details of important low and moderate Reynolds number flow applications and then high Reynolds number flows with boundary layer phenomena. Compare exact, approximate, numerical, and experimental solution methods.

223. Turbulent Flow
(3) STAFF
Prerequisites: ME 220A-B or Chemical Engineering 220A-B.

Same course as Chemical Engineering 221.

Nature and origin of turbulence, boundary layer mechanics law of the wall, wakes, and jets, transport of properties, statistical description of turbulence, measurement problems, stratification effects. Application of principles to practical problems is stressed.

225AA-ZZ. Special Topics in Mechanical Engineering
(3) STAFF
Prerequisite: consent of instructor.

Specialized courses dealing with advanced topics in one or more of the following areas: dynamic systems, control and robotics, fluid mechanics, materials science and engineering, ocean engineering, solid mechanics and structures, thermal sciences.

230. Elasticity and Plasticity
(3) MCMEEKING, BELTZ
Prerequisite: ME 219 or MATR 207

Same course as Materials 230.

233A. Design of Composite Structures
(3) KEDWARD
Prerequisite: ME 230 or 275A.

Emphasis is placed on the differences of design with composites vis-à-vis the design of conventional metallic structures. The content is directed at the class of polymer-matrix composites.

234A. Structural Dynamics
(2) STAFF

236. Nonlinear Control Systems
(4) KOKOTOVIC, TEEL
Same course as ECE 236.

Recommended preparation: ECE 230A. Analysis and design of nonlinear control systems. Focus on Lyapunov stability theory, with sufficient time devoted to contrasts between linear and nonlinear systems, input-output stability and the describing function method.

237. Nonlinear Control Design
(4) KOKOTOVIC
Prerequisite: ECE 236 or ME 236.

Same course as ECE 237.

239. Conduction Heat Transfer
(3) STAFF
Prerequisite: undergraduate course in heat transfer.

Development of mathematical representation of conduction heat transfer and techniques available for analytical, analog, and numerical solutions.

240. Convective Heat Transfer
(3) STAFF
Prerequisite: undergraduate course in heat transfer.

Solutions to the momentum, continuity, and energy equations will be considered for both natural and forced convection. Applications to industrial problems, convective transfer in high-Reynolds number flows and in rarefied flows, and the effects of chemical reactions on convective rates will be included.

241. Radiative Energy Transfer
(3) STAFF
Prerequisite: undergraduate course in heat transfer.

The physical nature of radiation and of its interaction with matter, conservation principles in radiative transfer and their relation to molecular and convective processes, and thermodynamic equilibrium with consideration of nondimensional parameters is considered. Applications to astrophysics, combustion, and plasma technology are discussed.

243A-B. Linear Systems I, II
(4-4) KOKOTOVIC, RAMIEH
Prerequisites: ME 210A (for 243A): ECE 140; and, ECE 230A or ME 243A; and ME 210A.

Same courses as ECE 230A-B.

Methods of solution of partial differential equations and boundary value problems, variational methods, Laplace transform methods, Green’s functions, complex variables, and conformal mapping techniques.

244A. Advanced Theoretical Methods in Engineering
(4) FREDRICKSON, CHIELKA, LEAL
Prerequisite: consent of instructor.

Same course as Chemical Engineering 230A.

Methods of solution of partial differential equations and boundary value problems. Linear vector and function spaces, generalized Fourier analysis, Green’s function analysis, calculus of variations, and conformal mapping techniques.

244B. Advanced Theoretical Methods in Engineering
(3) FREDRICKSON
Prerequisites: ME 244A and consent of instructor.

Same course as Chemical Engineering 230B.

250. Advanced Thermodynamics
(3) MILSTEIN
Prerequisites: ME 151A-B.

251. Statistical Thermodynamics
(3) MILSTEIN
Prerequisites: ME 151A-B.

An extended treatment of the fundamentals of statistical thermodynamics, equilibrium distributions, properties of gases, liquids, and solids.

252A. Computational Fluid Dynamics
(3) MEIBURG
Prerequisites: ME 210C or Computer Science 211C or ECE 210 or Mathematics 206C or Chemical Engineering 211C.

252B. Computational Fluid Dynamics
(3) MEIBURG
Prerequisites: ME 210C or Computer Science 211C or ECE 210 or Mathematics 206C or Chemical Engineering 211C.

Discussion of appropriate boundary conditions. Nonlinear convection dominated problems, curvilinear coordinates, basics of grid generation. Inviscid flow, boundary layer flow, incompressible Navier-Stokes flows.

252C. Computational Fluid Dynamics
(3) MEIBURG
Prerequisites: ME 210C or Computer Science 211C or ECE 210 or Mathematics 206C or Chemical Engineering 211C.

254. Optimal Control of Dynamic Systems
(4) RAMIEH
Prerequisite: ME 234A or ECE 230A or equivalent.

256. Introductory Robust Control with Applications
(4) SMITH, KHAMMASH
Prerequisites: ME 234A and ME 235A and, ME 230B (may be taken concurrently).

Same course as ECE 221.

Robust Control theory; uncertainty modeling; stability of systems in the presence of norm-bounded perturbations; induced norm performance problems; structured singular value analysis; H-infinity control theory; model reduction; computer simulation based design project involving practical problems.

260A. Materials Structures and Bonding
(3) MILSTEIN
Prerequisite: consent of instructor.

Crystal structures (Miller indices, Bravais lattices, symmetry operations). Modeling of atomic bonding, determination and applications of interatomic potentials, atomic basis for elastic moduli. Crystal anisotropy. Lattice statics and molecular dynamics computations.

262. Thermodynamics and Phase Equilibria
(3) ODette, CLARK, ZOK
Prerequisite: consent of instructor.

Same course as Materials 201.

Advanced thermodynamics with emphasis on phase equilibria, properties of solutions, and multicomponent systems.

264. Mechanical Behavior of Materials
(3) STAFF
Prerequisite: consent of instructor.

Same course as Materials 220.

265. Composite Materials
(3) ODette, CLARK, ZOK
Prerequisite: consent of instructor.

Same course as Materials 261.

271. Finite Element Structural Analysis
(3) MCMEEKING
Prerequisite: ME 219.
Same course as Materials 240.

275. Fracture Mechanics
(3) ODETT, MCMEEKING
Prerequisite: ME 219.
Same course as Materials 234.

285. Geophysical Fluid Dynamics
(3) MClEAN
Prerequisite: ME 152A.

291A. Physics of Transducers
(3) SOH
Prerequisite: graduate standing.
Recommended preparation: ECE 220A (may be taken concurrently).
The use of concepts in electromagnetic theory and solid state physics to describe capacitive, piezoresistive, piezoelectric and tunneling transduction mechanisms and analyze their applications in microsystems technology.

292. Design of Transducers
(3) TURNER, PENNATHUR
Prerequisites: ME 291A and ECE 220A; graduate standing.
Design issues associated with microscale transduction. Electrodynamic, linear and nonlinear mechanical behavior, sensing methods, MEMS-specific fabrication design rules, and layout are all covered. Modeling techniques for electromechanical systems are also discussed.

295. Group Studies: Controls, Dynamical Systems, and Computation
(1) STAFF
Same course as ECE 295, Computer Science 592, and Chemical Engineering 295.
A series of weekly lectures given by university staff and outside experts in the fields of control systems, dynamical systems, and computation.

501. Teaching Assistant Practicum
(1-4) STAFF
Normally required of students serving as teaching assistants. No unit credit allowed towards advanced degree.
Practical experience in the various activities associated with teaching, including lecturing, supervision of laboratories and discussion sections, preparation and grading of homework and exams.

503. Research Assistant Practicum
(1-4) STAFF
Will not count as unit credit towards M.S. or Ph.D. degree in mechanical engineering.
Practical experience in the various activities associated with research, including experimental work, theoretical work and analyses, and assisting department faculty and other professional researchers in their duties.

## UNIVERSITY REQUIREMENTS

- **American History and Institutions** – (one 4-unit course, may be counted as G.E. if selected from approved list)
- **UC Entry Level Requirement: English Composition**
  - *Must be fulfilled within three quarters of matriculation*
  - Satisfied by:

## GENERAL EDUCATION

### General Subject Areas

#### Area A: English Reading & Comprehension
- (2 courses required)
  - **A-1:**
  - **A-2:**

#### Areas D & E: Social Sciences, Culture and Thought
- (2 courses minimum)
  - **Areas D & E:**

#### Areas F & G: The Arts, Literature
- (2 courses minimum, at least 1 from Area G)
  - **Areas F & G:**

- 2 additional courses from Areas D, E, F, or G
  - **G:**

### Special Subject Areas

- (Please refer to the General Education Program Requirements booklet for more information)
  - **Depth:**
  - **Ethnicity (1 course):**
  - **European Traditions (1 course):**
  - **Writing (4 courses required):**

### Approved Departmental Electives:

- ECE 124A-B-C-D
- ECE 125
- ECE 130C
- ECE 135
- ECE 140
- ECE 141A-B-C
- ECE 144
- ECE 145A-B-C
- ECE 146A-B
- ECE 147A-B-C

- ECE 148
- ECE 149
- ECE 152B
- ECE 153A-B
- ECE 154
- ECE 155A-B
- ECE 156A-B
- ECE 158
- ECE 160
- ECE 162A-B-C

- ECE 178
- ECE 181A-B-C
- ECE 183
- ECE 192 or 196 (4 unit combined max)
- OR ECE 188A-B
- ECE 194AA-ZZ (excluding ECE 194R)
- ENGR 100, 103, 185A, 185B
- MATRL 100A, C
- MATRL 100B or MATRL 101
- MATRL 162A-B

### Departmental Electives taken:

<table>
<thead>
<tr>
<th>Course</th>
</tr>
</thead>
<tbody>
<tr>
<td>ECE 126</td>
</tr>
<tr>
<td>ECE 127</td>
</tr>
</tbody>
</table>

### Departmental Electives taken (continued):

<table>
<thead>
<tr>
<th>Course</th>
</tr>
</thead>
<tbody>
<tr>
<td>ECE 128</td>
</tr>
</tbody>
</table>

### Courses required for the major, inside or outside of the Department of Electrical and Computer Engineering, cannot be taken for the passed/not passed grading option. They must be taken for **letter grades**.

* if applying to the BS/MS Materials program, juniors must take MATRL 100A in fall, MATRL 100B in winter, and MATRL 100C in spring.
Calendar, 2009-2010

Undergraduate admission
Application filing period for undergraduate admission, to be filed with the University of California, Undergraduate Application Processing Service, P.O. Box 4010, Concord, CA 94524-4010. Web site: www.universityofcalifornia.edu/apply

Undergraduate returning students
Application filing period for readmission, to be filed with the Office of the Registrar by undergraduate students who have been absent for one or more quarters, who withdrew during their last quarter of attendance at UCSB, or who cancelled or had their registration lapsed.

Registration begins
Quarter begins
Convocation
Pre-instructional activities:
Required testing, advising, meetings, and new student orientation
First day of instruction
Last day of instruction
Final examinations
Quarter ends
Commencement

Summer Sessions 2010
