

Professor's Research Among 20 Years of Best Papers in Computing

Two of professor Rick Wolski's papers made the "20 best papers in the last 20 years" list from the International ACM Symposium on High Performance and Distributed Computing

Rich

Two of [Professor Rich Wolski](#)

's papers have been selected among the 20 best papers in the last 20 years from the International ACM Symposium on High Performance and Distributed Computing (HPDC). The published papers are titled [Forecasting Network Performance To Support Dynamic Scheduling Using The Network Weather Service](#) and [Scheduling from the Perspective of the Application](#).

The reviewing process began with paper nominations by the HPDC community-at-large. A committee then considered the nominated papers and recommendations carefully to select a top group of 20 papers. A special proceedings containing the set of selected papers will be produced by Omni-Press and distributed at HPDC 2012 in Delft, Netherlands.
